SPRINGS COLLEGE ARUA

End of Term 1 exams 2026

S.2 Chemistry

Paper 1

Theory

2 Hours

INSTRUCTIONS

- *This paper consists of four examination items in two sections A and B.*
- *Write your responses in the gaps left for section A and use the answer booklet provided for responses in section B.*
- *Respond to all the items in both the sections.*
- *Untidy work and unreadable handwriting will not be scored.*

SECTION A

Item 1

Amina and Jolly were playing netball in their backyard, near a garden full of flowers. The ball rolled into a garden, and when Jolly picked it up, a bee stung her. Jolly was very hurt and uncomfortable, but Amina told her to use a special kind of Medicine at home to help her fuel feel. This was a good first aid tip!

Task

As a chemistry learner;

a) Point out the product Jolly can choose.

_____

_____

_____

b) Help Amina understand how the alkaline product works.

_____

_____

_____

_____

_____

_____

_____

_____

c) Evaluate the products

_____

_____

_____

_____

_____

_____

_____

d) Side effects of using the products above to the society

_____

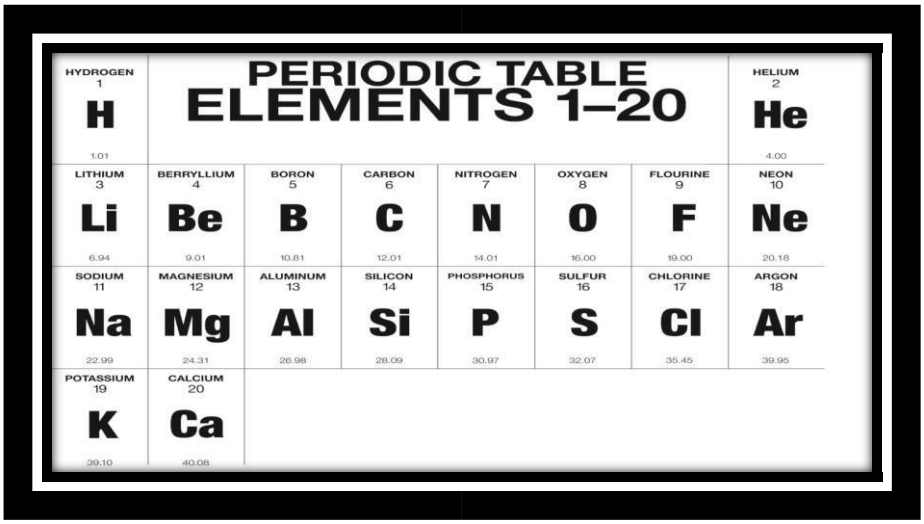
_____

_____

_____

Item 1:

During a chemistry lesson at Springs College Arua, Mr. Manzede was explaining how different elements in the periodic table are used for various purposes including making household materials. He hinted on element X, which he said that has atomic number 13 and belongs to group 3 and period 3 of the periodic table. (Where X is not the actual symbol of the element).



He further added that these category of elements when improperly disposed have a huge impact on the environment. Your friend did not understand which element and what exactly the teacher was talking about. He has approached you to help him out.

Task:

Using your chemistry knowledge,

Explain to him;

(a) The identity and category of the above element.

_____

_____

_____

_____

(b) (i) The properties of this class of element.

_____

_____

_____

_____

_____

ii. One other application of the element.

_____

_____

(c) Advise him on the impact of the element to the environment and how it can be mitigation.

_____

_____

_____

_____

SECTION B

Attempt All

Part 1

Item 3

Air is a mixture of gases and it is mainly composed of nitrogen at 78% and 21% percentage proportion. In Uganda, there is a challenge of shortage of oxygen in hospitals and nitrogen in fertilizer manufacturing industry. In order to increase the supply of oxygen and reduce the death rate of patients in ICU as well as increasing agricultural productivity, the government is trying to establish an oxygen and nitrogen production plant in your area but the people are ignorant about how the production process will be conducted and how the environment will be managed.

Task

Make a write up of the sensitization message in this context.

Part 2

Item 4

A metal fabricating factory was established at Nakavule village. Local people in this area have chiefly been carrying out livestock farming and fishing. There has reportedly been complaints about the rampant respiratory diseases, reduced crop produce, fish catchment and bad smell produced by water. This has raised concern from the government through the ministry of environment and uncertainties to merge people around there for sensitization.

Task

Prepare a write up of the sensitization message that may be used to address the people.

THE END

Be like Protons: stay positive and think like a Noble Gas: keep cool and don't let the pressure react with you.
