BASIC PHYSICS FORMULAE

Principle of Moment Σ Anticlockwise Moment $= \Sigma$ Clockwise Moment	For a body in rotational equilibrium, Sum of ACW Moment = sum of CW Moment
Pressure	
Pressure $\mathbf{P} = \frac{F}{A}$	P = Pressure F = Force over area, A A = Area
Pressure of liquid column $\mathbf{P} = hpg$	P = Pressure p = density, h = height of liquid column g = gravitational field strength.
Energy, Work and Power	
Work Done $\mathbf{W} = Fd$	W = work done F= force d= distance in direction of force
Power $\mathbf{P} = W/t = Fv$	Work done per unit time, t
Kinetic Energy $\mathbf{E_k} = \frac{1}{2}mv^2$	E_k = Kinetic Energy m = mass v = velocity
Gravitational Potential Energy $\mathbf{E_p} = mgh$	g = gravity =9.81 m/s h = height m = mass
Conservation of Energy $\mathbf{E_1} = \mathbf{E_2}$	E_1 = Total Energy Before E_2 = Total Energy After Energy cannot be created or destroyed. It can only be transformed or converted into other forms.
