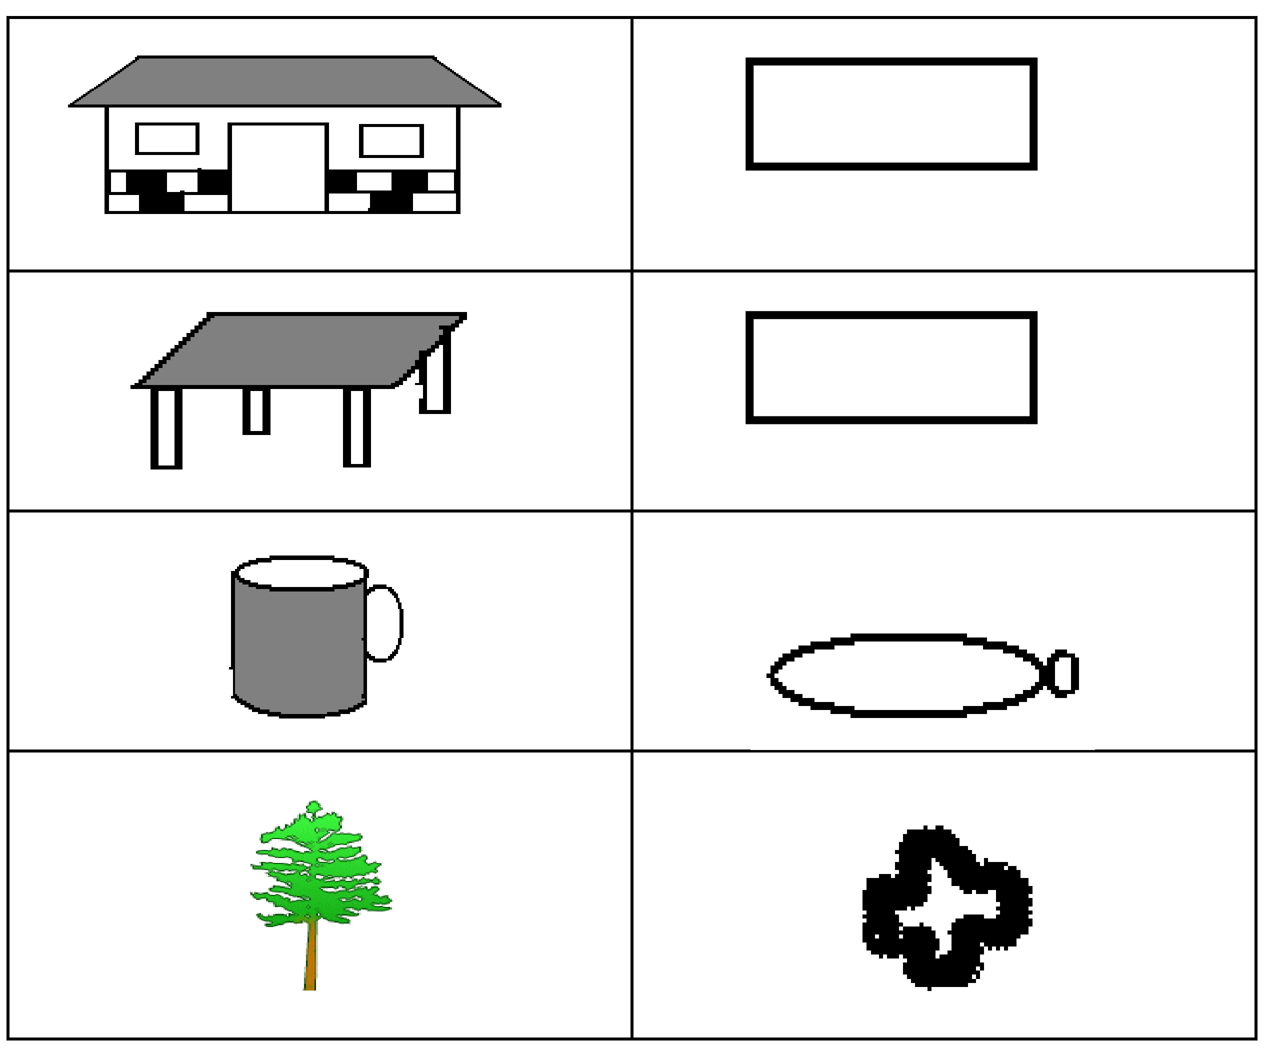
Week 2

TOPIC: LOCATION OF OUR DISTRICT
SUB-TOPIC: MAPS AND PICTURES

A **map** is a drawing of an object as seen from above.
A **picture** is a drawing of an object as from aside.
ILLUSTRATIONS

PICTURE **MAP**



ACTIVITY
1. Draw a map of our class
2. Differences a between a map and a picture

A map
It is drawn as seen from above
It cannot be easily identified
Big masses can be drawn
It is easy to draw
Map symbols (Defn: importance and common map symbols)

A picture
It is seen and drawn from aside
It is easily identified
Big masses can be drawn
It is not easy to draw

<u>Map symbols</u>

Map symbols are signs and colours used on a map.

Why are map symbols used on a map?

hi5educentre256@gmail.com

To avoid congestion on a map/ to make the map tidy
To make map reading easy

Common symbols used on a map

Note; include map symbols of two types of lakes, rivers hills, swamps, airports, inland and seaports, mountain and mountain peaks, bridge etc.

Elements of a good map

These are things that a good map should have

1. A **scale** - It helps a map reader to measure distance
2. A **compass direction** - Helps to show direction of places on a map
3. A **key -** Helps to interpret symbols used on a map
4. A **title -** Tells us what the map is about.
5. **Boundary/Frame** - Gives shape to the map and encloses.

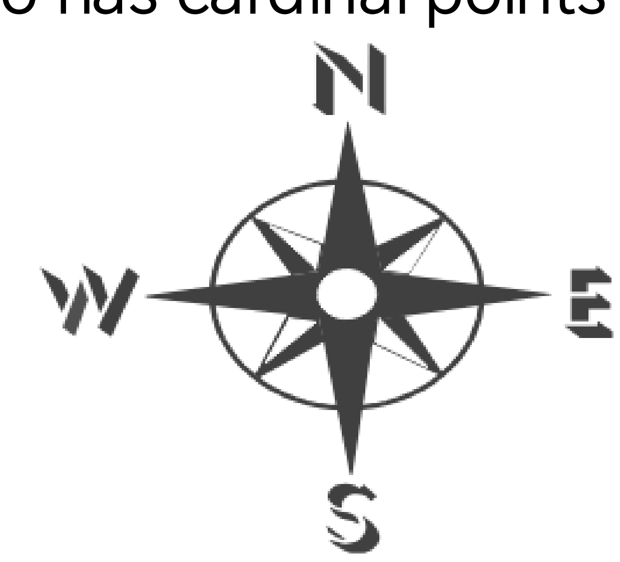
NB: A compass direction is an element of a map used to find the direction of places on a map.

It has four major points; North, East, South and West.
These four major points are called; Cardinal points.
There are other four points between cardinal points called semi-cardinal points/ secondary points.

References

Mk. SST plok4pg 1-4 Sharing our world bk4 pg 3
Mk SST Trs guide bk4 pg 28-31 Comprehensive SST pbk4 pg 1-3
Elements of a good map
These are things that a good map should have.
a) A scale
b) A compass direction
A compass is an instrument used for finding directions of

A compass also has cardinal points and semi cardinal points (secondary)



hi5educentre256@gmail.com

Cardinal points	**Secondary points**
North	North East
South	South East
East	North West
West	South West

NOTE: When at rest, compass points in the north
A face of a compass is like a circle. There fore directions are measured in degrees

Reference
Sharing our world pbk4 pg 3-5
MK SST pbk 4 pg 3
Comprehensive SST bk4 pg 2.3

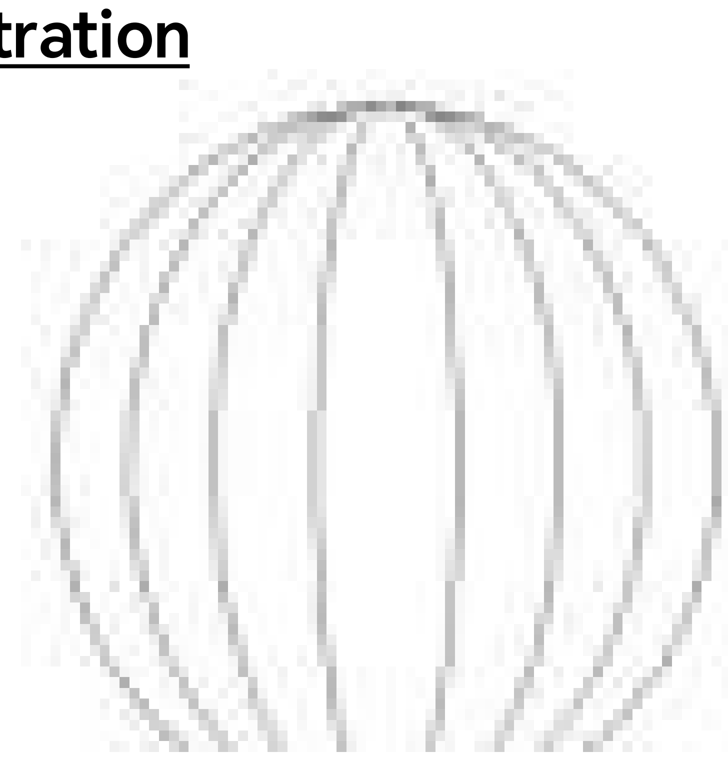
SUB TOPIC: LOCATING DIRECTION OF PLACES ON A MAP
Ways of finding direction of places
1. By using a compass
2. Using the position of shadows
3. Using the position of the sun and stars
4. Using the major land marks e.g. hills, valleys, mountains etc.
5. By using longitudes and latitudes. (grid reference)

People who use a compass in their daily work
Pilots
Sailors
Soldiers
Frogmen
Mountain climbers
Rally drivers

Longitudes and latitudes
Longitudes are imaginary lines drawn on a map running from North to South
The major line of longitude is called the Prime Meridian or Greenwich Meridian.
It is marked 0^0

Major longitude
-The major line of longitude is called the **Prime Meridian.** It is also called the Greenwich Meridian
-International Date Line 180^0
The Greenwich divides the earth into two equal parts called hemispheres. Namely:
- ✓ The Eastern hemisphere
- ✓ The Western hemisphere

Illustration



Importance of longitudes

- ✓ They help to locate places on a map
- ✓ They help to determine time of the day

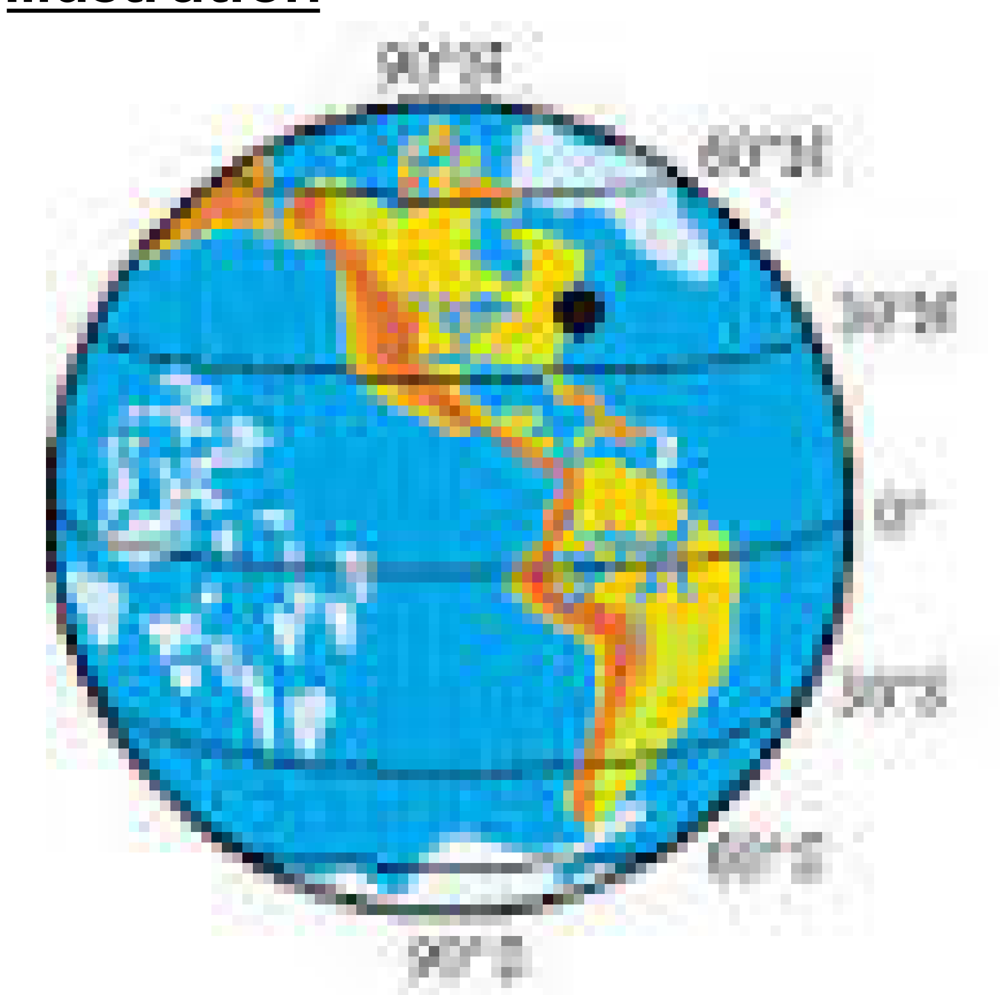
Reference

MK SST bk4 pg 32, Trs guide
Uganda pri. Sch. Atlas

Latitudes

Latitudes are imaginary lines drawn on a map running from East to West
The major line of latitude is called the Equator.
It is marked 0^0

Illustration



Main lines of latitude

Equator	0^0
Tropic of cancer	23.5^0 N
Tropic of Capricorn	23.5^0 S

Activity

1. Early on a sunny morning stand outside so that
2. Your right hand points towards the rising sun (East)
3. Your left hand will point the west (where it sets)
4. You will be facing North and your back will be in the South

hi5educentre256@gmail.com

Using the position of the sun and shadow

In the morning, the sun is in the East and in the evening it is in the West
So when the sun is in the East (morning the shadow goes to the West.
When the sun is in the West the shadow goes to the East
At noon, since the sun is above (over head). The shadow will be at the centre of the object or around it.

Different objects can be used e.g. tin, table, house etc
By using land marks such as a hill, mountain, a big tree, vegetation etc

Reference

Mk SST pbk4 pg 8
Comprehensive SST pg 2-3
Sharing our world bk4 pg 3

REVISION EXECISE

1. Explain the meaning of the term map
2. Write down four differences between a map and a picture
3. Draw the picture of a tree in the space provided
4. Draw the following map symbols
   Crossroads
5. What name is given to the four major points of a compass?
6. Why do we need a scale on a map?
7. Where does a compass point while at rest?
8. Identify any two ways of finding directions of places on a map
9. Mention any two groups of people who use a compass
10. Sandra was going to school in the morning. In which direction was the sun?

TOPIC: LOCATION OF OUR DISTRICT
SUBTOPIC: POSITION AND SIZE OF OUR DISTRICT

Our country is Uganda. Our district is Kampala

A map of Uganda showing the location of Kampala

hi5educentre256@gmail.com

SUB TOPIC: POSITION AND SIZE OF OUR DISTRICT
DIFFERENT REGIONS IN UGANDA

- Northern region
- Central region
- Eastern region
- Western region
- South Western region
- NorthWestern region/Westnile region.
- Northern Eastern region/ Karamoja.

Kampala is found in the central region

WEEK 3
Sub topic: Districts and regions in Uganda

Region	Districts	Tribes
Northern	Kitgum, Gulu,Pader.	Acholi
	Apac ,Lira,	Langi
North Western	Adjuman, Nebbi Yumbe	Alur Lugbara, Madi
	Arua Moyo	Kakwa, Jonam
North Eastern	Kotido, Moroto	Karimojong, Tepeth
	Nakapiripirit	Suk, Labour, Ateker
Western	Masidi, Hoima, Kabale	Banyoro, Batoro
	Kasese Kaborole Kyejojo	Bakonjo
	Kamwenge Bundibugyo	Bamba

Central	Kampala, Mpigi, Rakai	Baganda, Baruli
	Mukono, Kiboga, Masaka	Banyara
	Luwero Mubende, Wakiso	Baziba
	Kayunga Ssembabule	
Eastern	Jinja, Iganga Palisa	Iteso, Basoga
	Tororo, Mbale, Soroti, Busia	Banyole, Kumam
	Kamuli, Sironko, Bugiri	Bagwere, Bakenyi
	Mayuge, Kapchorwa, Kumi	Jopadhola
Western	Ntungamo, Bushenyi	Banyankole
	Kisoro, Kabale, Kanungu	Bakiga
	Mbarara, Rukungiri	Bafumbira

New districts in Uganda

<u>**New districts**</u>	<u>**Mother district**</u>
Bunyangabu	
Rukiga	
Namisindwa	Manafwa
Kyotera	Rakai
Packwach	Nebbi

Comprehensive SST bk4 pg4.

DIVISION/ URBAN COUNCILS OF KAMPALA

- Kampala is the capital city of Uganda
- It is found in the central region
- It occupies an area of 197 km^2
- Kampala city is headed by the **Lord Mayor (** Erias Lukwago) as the political head
- Kampala is also headed by an appointed executive Director (Mrs. Jennifer Musisi) as the administrative head
- Kampala district is under the ministry of Kampala Affairs.
- The current minister for Kampala affairs is Hon. Betty Kamya
- Kampala city is under the Kampala Capital City Authority (KCCA)

❖ Kampala has a population of about 1,516,210 people according to 2014 national census

DIVISIONS OF KAMPALA

Kampala district is made up of five divisions also called urban councils
These include; Rubaga, Central, Kawempe, Nakawa and Makindye
Nakawa is the biggest and the smallest is Central

A map showing division/urban councils of Kampala.

Important places in the divisions.

- ❖ **Central division** — Parliamentary building, state house, banks, government offices.
- ❖ **Kawempe division** — Makerere university, Mulago hospital
- ❖ **Rubaga division** — Rubaga hospital,Rubaga cathedral
- ❖ **Makindye division** — Army barracks.
- ❖ **Nakawa division** — Century bottling company, Makerere University Business School (MUBS)

Other important places: *Banks, schools, hospitals, recreation centres etc*

References

MK.SST PBK4 pg 7
Prim SST bk4

hi5educentre256@gmail.com

Uganda pri. Sch. Atlas pg 28.

Importance of Kampala

- It is the capital city of Uganda
- Kampala has the biggest number of social centres e.g hospitals, schools, medical services.
- Kampala has all ministerial headquarters.
- It has the parliament building
- It is the largest commercial centre of Uganda
- It is the most industrial centre of Uganda
- It has the natural museum.

Problems facing Kampala

- There is traffic jam especially in the morning and evening
- Kampala city is densely populated.
- Roads in Kampala city have pot holes, others are narrow.
- There are many robbers in Kampala.
- Accommodation in Kampala is expensive
- There are murderers in Kampala city
- Many people are poor and they live on streets.

Reference: MK. SST PBK4 pg7
Sharing our world pbk4 pg 6-8

REVISION EXERCISE

1. In which district is our school?
2. Name the district that boarder Kampala in the
   North South East, West
3. Apart from Kampala, write down any two districts fund in the central region
4. Identity two districts in the West Nile
5. Write down any three new districts in Uganda
6. Why does the government create new districts?
7. Name the smallest and biggest divisions of Kampala
8. State one port found in Kampala district
9. Write KCCA in full
10. Mention two important places in Kampala
11. Write down two problems faced by people living in Kampala
12. Identify the solution to the above mentioned problem

TOPIC: LOCATION OF OUR DISTRICT IN UGANDA
SUBTOPIC: LATITUDES AND LONGITUDES

Lines of latitude

These are parallel mapping lines

Note: The Equator is the major line of latitude
The equator divides the earth into two parts called hemispheres. Namely;

1. Northern Hemispheres

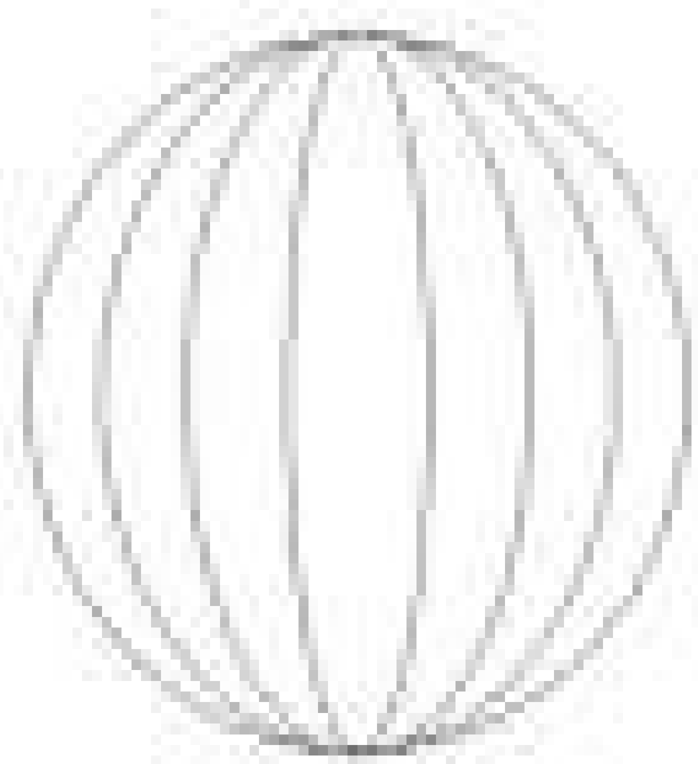
hi5educentre256@gmail.com

2. Southern Hemispheres

Districts crossed by the equator
- ✓ Kasese
- ✓ Sembabule
- ✓ Mpigi
- ✓ Kiruhura
- ✓ Wakiso
- ✓ Kalungu
- ✓ Kamwenge
- ✓ Ibanda etc

Importance of latitude
1. Latitudes help to locate places on a map
2. They help us to determine the climate of places

Lines of longitude
Lines of longitude are imaginary lines drawn on a map running from North to South.



Lines of Longitude

Major longitude
-The major line of longitude is called the **Prime Meridian.** It is also called the Greenwich Meridian
-International Date Line 180^0
The Greenwich divides the earth into two equal parts called hemispheres. Namely:
- ✓ The Eastern hemisphere
- ✓ The Western hemisphere

Importance of longitudes
- ✓ They help to locate places on a map
- ✓ They help to determine time of the day

hi5educentre256@gmail.com

WEEK 5
TOPIC: PHYSICAL FEATURES AND VEGETATION
SUBTOPIC: Physical features in our district
CONTENT:
What are physical features?

Physical features are natural landforms of an area.

Examples of physical features

- ✓ Mountains,
- ✓ Plateau,
- ✓ Plains,
- ✓ Valley,
- ✓ Hills,
- ✓ Lakes and rivers
- ✓ Plains or low lands

Plateau

A plateau is a raised flat topped piece of land. It is also called a table land

A plateau has features like: lakes, rivers, plains, hills, valleys, rocks, springs, swamps and wells

Activities carried out on plateau

Industrialization, Farming, Lumbering, Fishing, Tourism

- Altitude is the height of the land above sea level
- Relief is the difference in height between landforms

Importance of plateau

- They have fertile soil for farming
- They are good for settlement
- They have lakes for fishing
- They are sources of rivers

REFERENCE: Monitor S.S.T pbk4 pg 5

MK Std SST bk4 Trs guide pg 37-38

MK pbk4 pg 10

MOUNTAINS

- A mountain is a big piece of land high above the land around it
- A peak is the highest point on a mountain
- A mountain range is a series of connected mountains

Types of mountains

1. **Block mountains**

   These are formed by faulting e.g. mountain Rwenzori in western Uganda

2. **Volcanic mountains**

These are formed by a process known as volcanicity

Here, old mount rocks crack. Down the earth's surface, temperature is high so the rock down melts. The molten rock (magma) is forced up due to pressure through the cracks. When magma reaches on the surface of the earth, it solidifies to form a volcanic mountain.

Examples of volcanic mountains

- Mt. Elgon
- Mt.Moroto
- Mt.Kadam
- Mt.Morungole
- Mt.Mufumbiro

Importance of mountains

1. Mountains help in rainfall formation.
2. They provide rocks for construction.
3. Mountain slopes are used for crop growing.
4. Some mountains are sources of rivers.
5. We get minerals from mountains.
6. Slopes of mountains are used for human settlement.
7. Mountains attract tourists.

Dangers of mountains

1. Mountains are habitats of dangerous animals.
2. They limit construction of roads and industries.
3. Mountain eruption leads to the death of people and plants.
4. They are hideout places of wrong people.
5. Mountain slopes encourage soil erosion.

REFERENCE:
MK SST Teacher's guide pg 39-40
MK Std SST pbk4 pg 11
Comprehensive SST pbk4 pg 8-9
Monitor SST pbk4 pg 5

Key

Mountain	**Peak**	**District**	**Height**
Mt.Moroto	Napak	Moroto	3084 m
Mt.Kadam	Dehasien	Nakapiripirit	3068 m
Mt.Elgon	Wagagai	Mbale	4321 m
Mt.Mufumbiro	Muhavura	Kisoro	4127 m
Mt.Rwenzori	Margherita	Kasese	5109 m

Reference
Atlas pg 6
MK S.S.T pbk4 Teacher's guide pg 39-40

REVISION EXERCISE

1. Define the term physical features
2. Write down any four physical features
3. Define the following
   a) A plateau
   b) Altitude
   c) Relief
4. Write down two importance's of plateau

5. Identify any two activities carried out on plateau
6. What is a mountain?
7. How are mountains important.(two ways)?
8. What name is given to a series of connected mountains?
9. How are block mountains formed?
10. Mention any two volcanic mountains in Uganda.
11. State two dangers of mountains.
12.

SUB TOPIC: HILLS

What is a hill?

A hill is a naturally raised area of land.

<u>Hills in Kampala and important features on them;</u>

✓ Makerere hill	University
✓ Nakasero hill	Blood Bank
✓ Mulago hill	Biggest hospital
✓ Muyenga hill	Water tanks
✓ Namirembe hill	Cathedral
✓ Muyenga hill	Water tanks
✓ Rubaga hill	Cathedral
✓ Kololo hill	Airstrip
✓ Mbuya hill	Army Barracks
✓ Nabulagala hill	Kasubi tombs
✓ Nsambya hill	American Embassy
✓ Naguru hill	Naguru hospital
✓ Kitante hills	Kitante hill
✓ Old Kampala hill	Gadaffi mosque

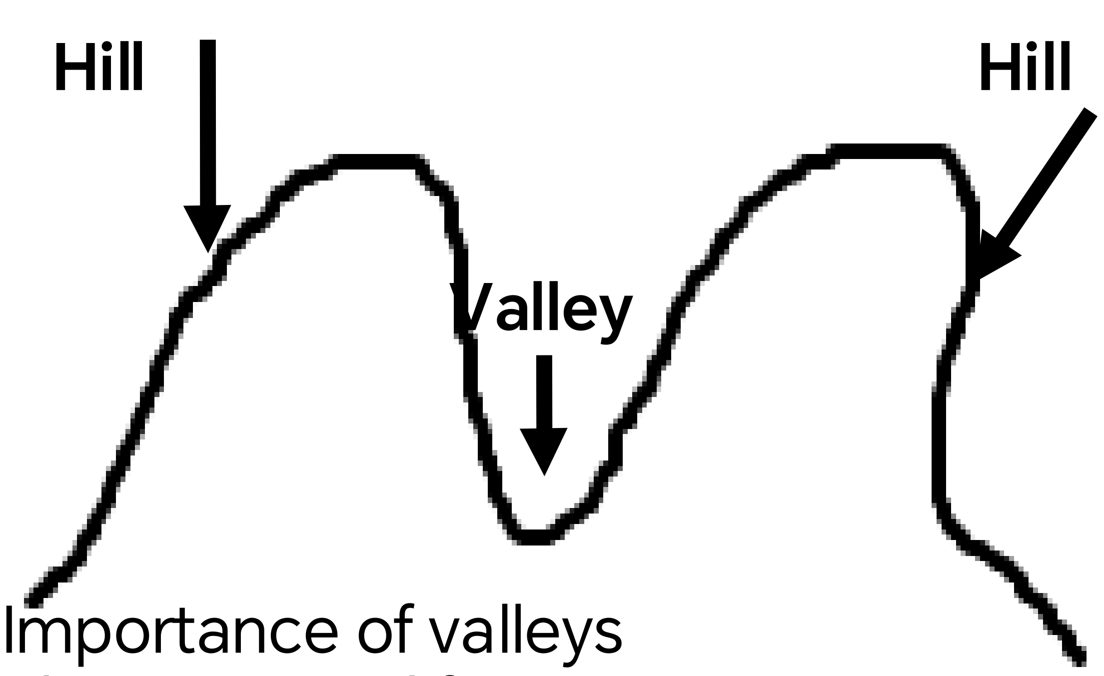
<u>VALLEYS</u>

A valley is a low land between two close hills.

<u>Examples of valleys found in Kampala</u>

- Bat valley
- Kisenyi valley
- Nakivubo valley
- Katanga valley
- Kitante valley

<u>An illustration of hills and a valley</u>



Importance of valleys

They are used for crop growing

They are used for human settlement

hi5educentre256@gmail.com

They are habitats for some wild animals
They are a source of raw materials for craft industry

Dangers of valleys
They are affected by severe soil erosion
They are affected by floods
There is excessive heat

Note:

- Some valleys have rivers flowing through them
- A rift valley is a wide and long depression on the earth's surface.
- Some lakes are found in the rift valley. These lakes are called rift valley lakes
- A rift valley is formed as a result of faulting
- An **escarpment** is a steep side of a rift valley

Rift valley lakes
They include:
1. L. Albert
2. L. Edward

Characteristics of rift valley Lakes
1. They are salty
2. They are narrow
3. They are very deep
4. Most of them do not have outlets
5. They are formed as a result of faulting

Reference
MK Std SST guide bk 4
Comprehensive SST pbk4 pg 12
A new primary SST for Uganda pbk4 pg 16

Revision questions
1. Define a lake
2. Which is the largest lake in Uganda?
3. State two importance of lakes and rivers
4. Name the longest river in Uganda
5. From which lake is salt extracted?
6. Name the water body that joins L.Edward and L.George.
7. Give two dangers of lakes and rivers.
8. What is a tributary?
9. What name is given to a low land between two highlands?
10. Identify two rift valley lakes you know in Uganda.
11. Why are the rift valley lakes salty?
12. Write down two characteristics of rift valley lakes.
13. How was a rift valley formed

REFERENCE:
MK Std S.S.T pbk4 pg 11

Monitor S.S.T for Uganda pbk4 pg 5
Comprehensive S.S.T pbk4 pg 15-16

Reference: Comprehensive S.S.T pbk4 pg 9

SUBTOPIC: LAKES AND RIVERS
A lake is a large water body surrounded by land
A river is a narrow and long water body that drains in a lake

Examples of lakes

- L.Victoria,
- L.Edward,
- L. George,
- L.Kyoga,
- L.Wamala,
- L.Albert,
- L.Bunyonyi

Examples of rivers

- R.Nile,
- R.Kafu,
- R.Katonga,
- R.Kagera,
- R.Aswa

Importance of lakes and rivers

1. Lakes and rivers provide water for domestic and industrial use
2. They help in rainfall formation
3. They are used for transport
4. They are fishing grounds
5. They attract tourists who bring in foreign exchange
6. Some rivers help in the generation of Hydro-electricity power.(H.E.P)
7. They are used for re-creation e.g setting up bitches
8. Some lakes are sources of minerals e.g L. Katwe

Dangers of Lakes and Rivers

1. They easily cause accidents
2. Lake and rivers have water weeds and water falls that hinder transport.
3. They are homes of dangerous animals for example snakes and crocodiles
4. They are habitats of disease vectors e.g. snails which cause Bilhazia
5. Lakes and rivers cause floods which destroy people's lives and property

A map of Uganda showing lakes and rivers

Key

Lakes	**River**	
A- L.Victoria	1- R. Nile	i. Buvuma Island
B- L.Edward	2- R. Aswa	ii. Buyala Island
C- L. George	3- RAchwa	iii. Kome Island
D- L.Albert	4- R. pager	
E- L. Kyoga	5-R. Nkusi	
F- L.Bunyonyi	6- R. Mpologoma	
G- L. Nabugabo	7. R. Mayanja	iv. Ssese Island
H- L. Nakivali	8-R. Katonga	
I- L Wamala	9- R. Kafu	

Reference
Monitor SST pbk4 pg 6 comprehensive SST pbk4 pg 8.9
Pri sch Atlas pg6

<u>Types of rivers</u>

- **Permanent rivers.**
  These flow throughout the year seasonal rivers They are small and flow only during wet season and dry up in the dry season
- **Sources of rivers**
  Rivers originate from
  High lands, Lakes, swamps
- **Tributary**
  A tributary is a small river joining a big/larger river
- **Distributary**. Is a branch of a large river (a small river branding of the major river

hi5educentre256@gmail.com

Reference
Monitor SST pbk4 pg6
Primary school atlas pg 6
Comprehensive SST pbk4 pg 8-9

Plains and valleys

Plains are low lying areas

Most rivers flow through plains before pouring their water into lakes, Ocean and Seas

Most plains receive little rainfall.

Importance of plains

1. Plains are good for keeping animals since they have grass
2. They are good habitats for wild animals
3. Plains are also suitable for farming

SUB TOPIC: VEGETATION;

Definition: Vegetation is the plant life cover on the earth's surface

Examples of vegetation

Forests, swamps, grasslands, pasture and crops semi-arid lands shrubs

Types of vegetation

There are two types of vegetation

Natural vegetation

Planted vegetation

Natural vegetation

This is the plant cover that grows on its own for example forests and grasslands swamps

Planted vegetation

This is the plant cover planted by people for example planted forests, crops, flowers etc.

Uses of vegetation

- ✓ It is a source of herbal medicine
- ✓ It is a source of fire wood
- ✓ It is a source of fruits
- ✓ It helps in rain formation
- ✓ It controls soil erosion
- ✓ It serves as wind breaks
- ✓ It is for beauty
- ✓ It improves on soil fertility
- ✓ It releases oxygen to the atmosphere

How people affect vegetation

Positive effects

- ✓ Afforestation
- ✓ Re-afforestation

hi5educentre256@gmail.com

- ✓ Agro forestry

Negative Effects

- ✓ Bush burning
- ✓ Deforestation
- ✓ Over cultivation
- ✓ Over grazing

Human activities done by people that destroy vegetation

- ✓ Brick making
- ✓ Road construction
- ✓ Building houses for settlement
- ✓ Building industries

Ways of caring for vegetation

- ✓ By watering vegetation
- ✓ By adding manure to vegetation
- ✓ By pruning vegetation
- ✓ By fencing vegetation

Reference:
Monitor SST pbk4 pg 10
Sharing our world pbk4 pg 14
MK SST pbk4 pg 12
Comprehensive pbk4 pg 14-15

SUB-TOPIC: Forests
Definition

A forest is a group of trees growing together
Uses of forests

- ✓ Forests help in rainfall formation
- ✓ They are a source of timber
- ✓ Forests provide us with both animal and plant food
- ✓ They are homes of some wild animals
- ✓ Forests attract tourists
- ✓ They control soil erosion
- ✓ Forests provide raw materials for hand crafts
- ✓ They also help in preserving water in the soil
- ✓ They are a source of herbs to people
- ✓ They are a source of wood fuel

Dangers of forests

- ✓ Forests are habitats for dangerous wild animals
- ✓ They are hide out places for wrong people
- ✓ They make road construction difficult

Types of forests

1. **Natural forests**
2. **Planted forests**

Natural forests

These are a group of trees that grow by themselves

Examples of natural forests in Uganda

- ✓ Mabira forest - Buyikwe district
- ✓ Bugoma forest - Hoima district
- ✓ Bwindi Impenetrable forest - Kabale
- ✓ Budongo forest - Masindi district
- ✓ Maramagambo forest - Mbarara/Bushenyi
- ✓ Mt.Elgon forest - Mbale district
- ✓ Marabigambo forest - Rakai district
- ✓ Kibale district - Kabarole district
- ✓ Ssese island forest - Kalangla district

We get hardwood from natural forests

Examples of trees found in natural forests

Mahogany, Mvule, Walnut, Teak, Ebony

The above trees give us hard wood which is used for making timber and for building

Planted forests

These are groups of trees planted by man

They include:

Lendu	-	Nebbi district
Mafuga	-	Rukungiri district
Katuugo	-	Nakasongola district
Nabyeya	-	Masindi district
Bugamba forest	-	Mbarara district

We get soft wood from planted forests

Uses of soft wood

i) It is used for making paper
ii) For making match boxes
iii) For making ply wood
iv) For making some musical instruments

Examples of trees that grow in planted forests

- Eucalyptus,
- Cypress,
- Pine,
- Cedar

hi5educentre256@gmail.com

Characteristics of planted forests

i) Trees are planted in rows
ii) Trees grow faster
iii) Trees have both soft and hard wood

Problems facing forests

- People carry out deforestation
- People burn bushes and fire destroys forests
- People carry out charcoal burning

Why do people cut down forests

- People cut down forests for timber
- To get land for settlement
- To get land for agriculture/farming
- To get land for industrialization

Care for forests

- Encourage people to plant trees (afforestation)
- People should plant trees where they have been cut (Re-afforestation)
- Farmers should plant trees together with crops (agro forestry)
- We should always report those who cut down trees
- People should stop bush burning near forest areas

SWAMPS

A swamp is a water logged area with vegetation
Swamp reclamation is the draining of water from swamps for human use

Importance of swamps

- Swamps help in rain formation
- They are a source of water
- They attract tourists , they are homes of animals and birds
- They are fishing grounds
- They are a source of craft materials e.g. clay, papyrus
- Swamps are used for growing crops like yams, rice and sugarcanes
- Swamps provide building materials like papyrus

REFERENCE:

MK Std S.S.T pbk4 pg 11-13
Monitor S.S.T pbk4 pg 12

Subtopic: Grass lands

A **grass land** is an area mainly covered by grass and scattered trees
In Uganda, there are two types of grasslands
These are:

1. Dry savanna
2. Wet savanna

hi5educentre256@gmail.com

Dry Savanna

These grow in places that receive little rainfall

Wet Savanna

Wet Savanna grassland grow in places that receive average rainfall.

Importance of grasslands

1. They are used as grazing areas for livestock
2. They are homes of wild animals
3. Grasslands prevent soil erosion
4. Grass is used for thatching houses
5. Grasslands control desert formation
6. Grasslands is used for mulching gardens
7. They help in rain formation
8. Some of the dry Savanna grassland are set aside as game parks

Examples of game parks in Uganda

- Murchison falls National Park (Largest in Uganda)
- Queen Elizabeth national Game Park etc (Second largest)
- Kidepo valley National Game Park
- Mt. Elgon National Game Park

Monitor SST pbk4 pg 11-12
Sharing our world pbk4 pg 15

Land use pattern in our district

Land means the ground which people own
It is a basic need of man

Land is divided into two groups, namely

1. Urban land
2. Rural land

Urban land is found in towns
Rural land is found in villages

Uses of land to man

1. For growing crops
2. For rearing animals
3. For building houses and industries
4. For constructing roads
5. For mining
6. For recreation (playing and enjoyment)
7. Land provides us with sources like water, clay, sand etc

hi5educentre256@gmail.com

How to care for land

1. By using good farming methods
2. By manuring the land

How land is acquired

1. By buying the land
2. Through inheritance
3. Through renting

Things that affect land use

- **Physical features**-Highlands lakes/rivers can make building and transport difficult.
- **Climate** -Very hot/dry areas are not good for crop growing.
- **Diseases** - some areas are unhealthy for people to live in for example when there are tsetse flies, mosquitoes etc.
- **Wars** - in places where there were war, people killed and the very few who remain cannot use it well.
- **Transport** - when factories, plantations and other businesses are put near the road, it is easy to transport the goods to the areas where there is market.
- **Mining** - where there are minerals the land is used for mining

Sharing our world pbk4 pg 15
Mk pbk4 pg 14
Mk Trs guide bk4 pg 407

Revision question

1. Define a forest.
2. How are forests important to people?
3. Write down the two types of forests.
4. Identify any two planted forests in Uganda.
5. Write the districts in which the following forests are found.
    a) Bugoma forest
    b) Budongo forest
    c) Mabira forest
6. Which type of wood is got from planted forests?
7. Write down two examples of trees found in natural forests.
8. State two problems faced by forest in Uganda.
9. Why do people cut down trees?
10. Define the following terms
    a) Afforest ration
    b) Reforestation
    c) Deforestation
11. How are swamps useful to use?
12. Identify any two crops grown in swamps
13. What do you understand by the term “vegetation?”
14. Identify the two types of vegetation
15. How are grasslands important?
16. Identify any two uses of land to man

hi5educentre256@gmail.com

17. How are game parks important?
18. Write two factors that may affect land use in Uganda

TOPIC: WEATHER IN OUR DISTRICT

SUBTOPIC: Weather is the condition of the atmosphere at a given time or place.

Types of weather

- Windy
- Sunny
- Cloudy
- Rainy

Elements of weather

- Rainfall
- Cloud cover
- Temperature
- Wind

.

Activity
Draw the types of weather

Clouds
Clouds are a mass of condensed water

Types of clouds

Nimbus clouds	They are very dark and low They give steady rainfall
Cumulo-Nimbus	They are lighter than nimbus clouds. They appear high in the sky and grow bigger when land
Cirrus clouds	They are very high. They appear not to be moving is hot and normally show a clear weather
Stratus clouds	They are grey in colour. They look like a blanket spread all over the sky

Importance of clouds

1. Clouds bring rainfall
2. They protect us from direct sunshine
3. Protect us from direct rain
4. Clouds helps to keep the place cool
5. They keep the earth warm at night

Dangers of clouds

1. Large and dark clouds can cause crushing of the aeroplanes.

Rainfall

Rainfall is the total amount of rain that falls in a particular area.
Rain is the water that falls from the sky in separate drops
Rain is the main natural source of water

Types of rainfall
1. Relief rainfall (or graphic rainfall
2. Cyclonic rainfall (frontal rainfall
3. Convectional rainfall

Convectional rainfall
This type of rainfall is commonly received around large water bodies and forests.
Conventional rainfall is mainly received around L. Victoria and the rest of the central region

Formation of convectional rainfall

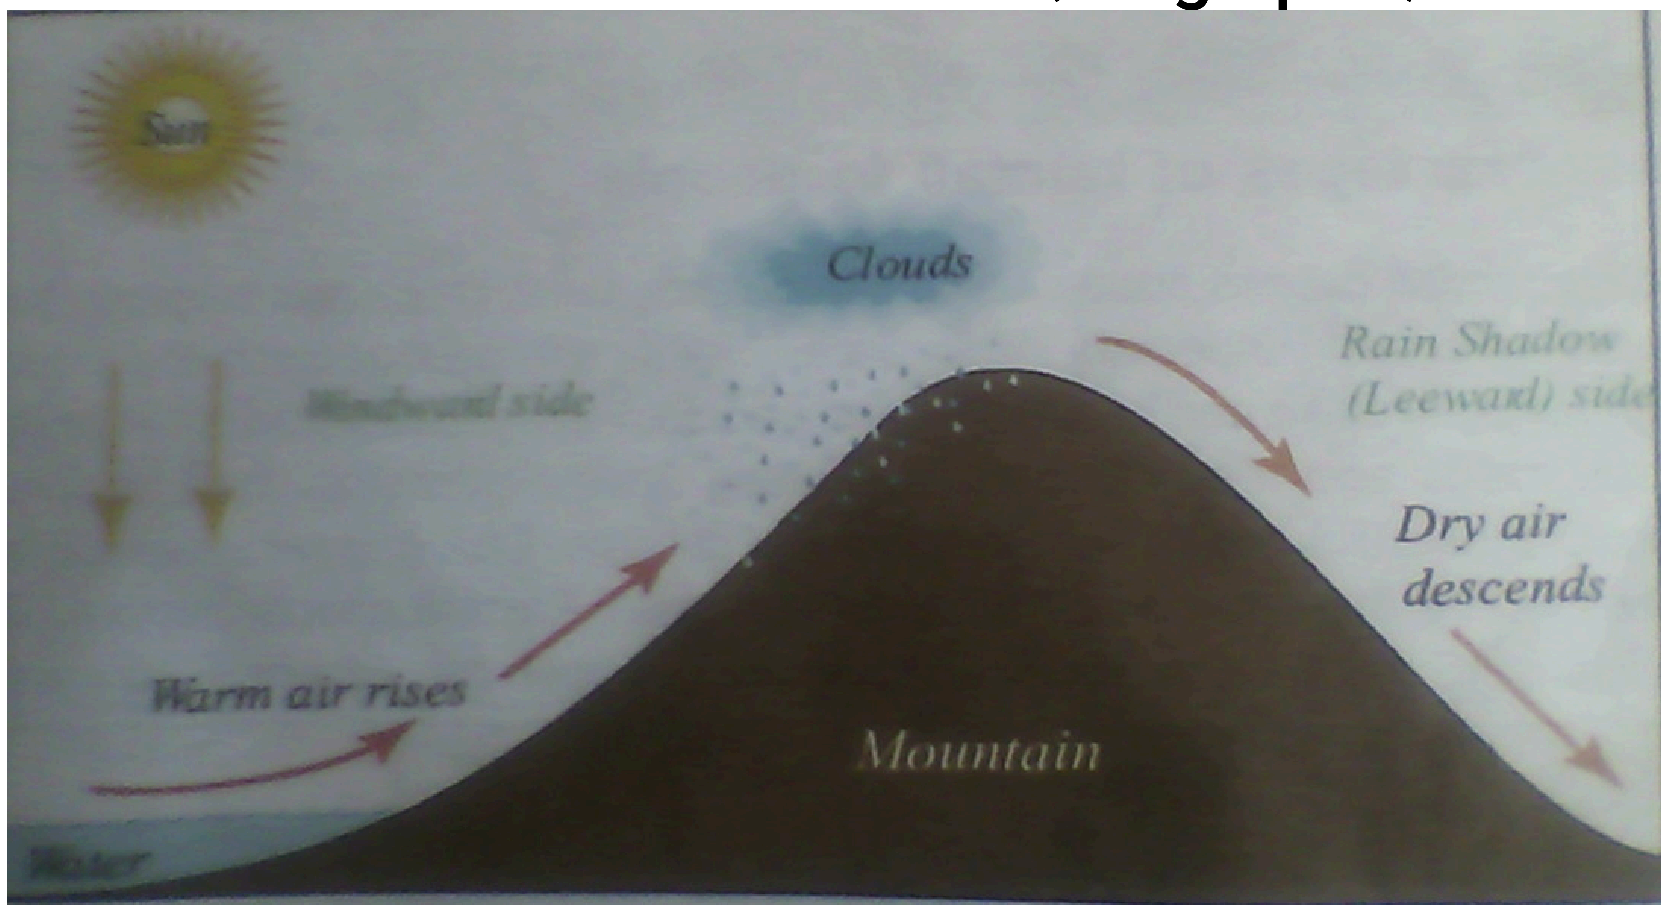
Comprehensive SST pbk4 pg 15-23
A new primary SST for Ug. bk4 pg 23
Monitor SST pbk4 pg 16

Relief rainfall
It is also called or graphic rainfall
It is received in areas around highlands (mountains and hills)

Formation of relief rainfall (Orographic)



- The wind word side receives rainfall
- The lee ward side (rain shadow) receives little or no rainfall
- The leeward has dry wind which cannot form rainfall
- Areas in Uganda that receive relief rainfall
- Around Mt. Elgon Mbale, Kapchorwa, Sironko
- Around Mt. Rwenzori Kasese

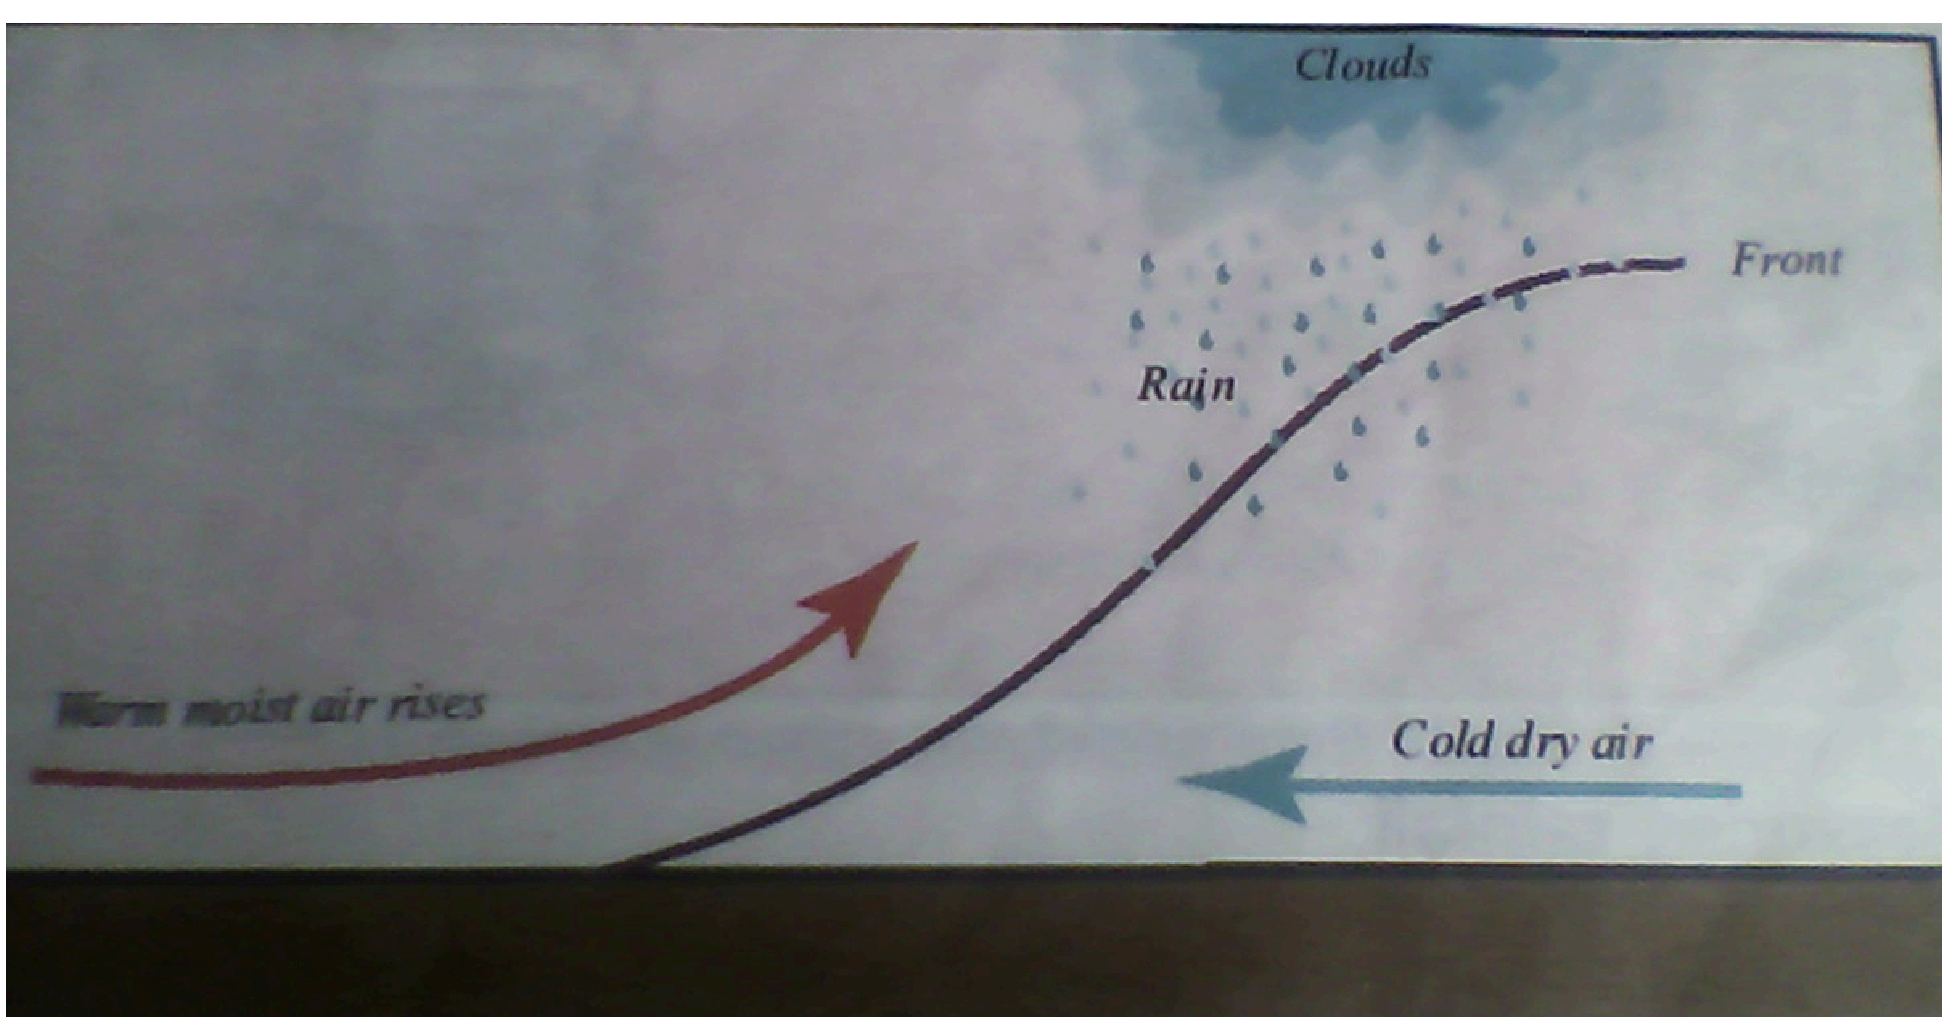
MK Std SST pbk 4 page 21
MK std SST Trs guide bk4 pg 48
Comprehensive SST pbk4 pg 19

Cyclonic rainfall
Cyclonic rainfall is also called frontal rainfall
It is received in flat areas

Formation of cyclonic rainfall



Areas that receive frontal rainfall are in the northern Uganda
The line separating the two air masses is called the front

Reference

Mk SST pbk4 pg 22
MK Trs guide pg 408

Advantage of rain fall to man
1. Rain is the major source of water
2. It softens the soil for cultivation
3. It helps crops to grow well
4. Rain adds on the level of rivers, lakes stream and wells
5. It enables plants to make their own food

Disadvantages of rainfall
1. Heavy rains cause floods which can destroy lives, crops and property
2. Heavy rains can break bridges
3. Rain encourages quick spread of diseases for example cholera

Measuring rainfall

Rainfall is measured using a rain gauge. It is measured in millimeters

A rain gauge is placed in the ground and about 30cm remain above the ground. This is to avoid running water from entering the rain gauge.

A rain gauge helps a farmer to know whether there enough water in the ground

A rain gauge is placed in an open place to receive direct rain drops

Rain gauge

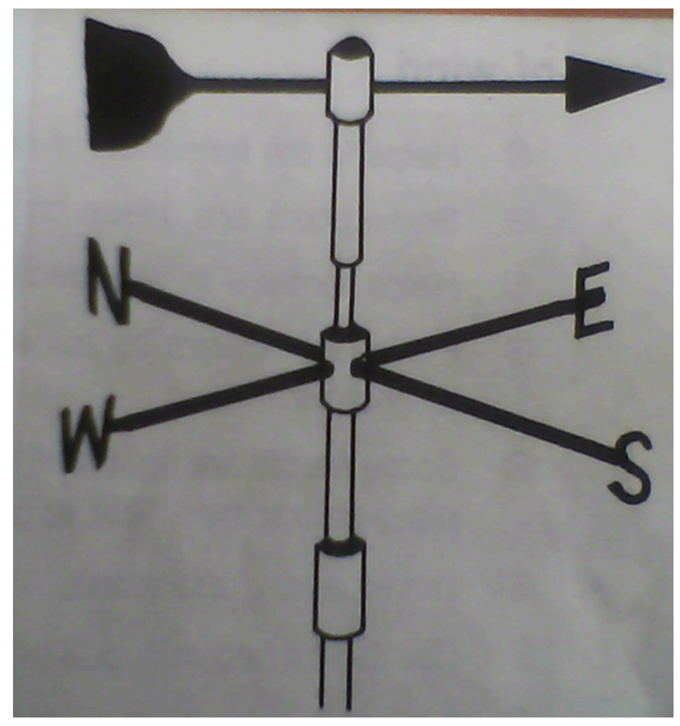
Wind

Wind is moving air in the atmosphere

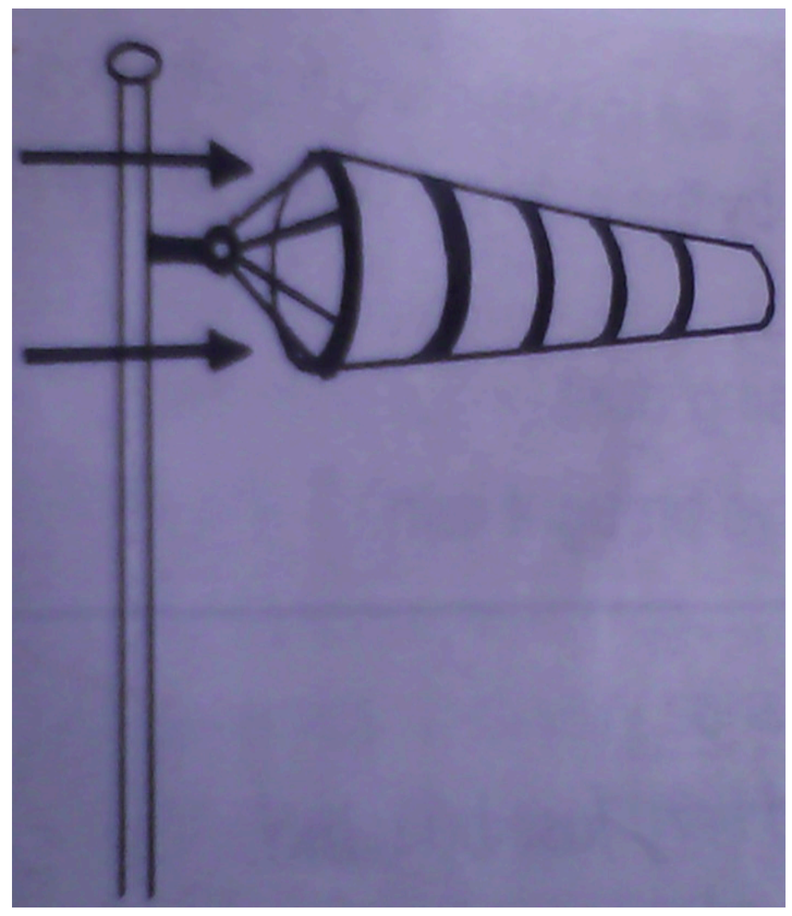
Wind instruments
- **Wind vane**

  A wind van is used to show the direction of wind

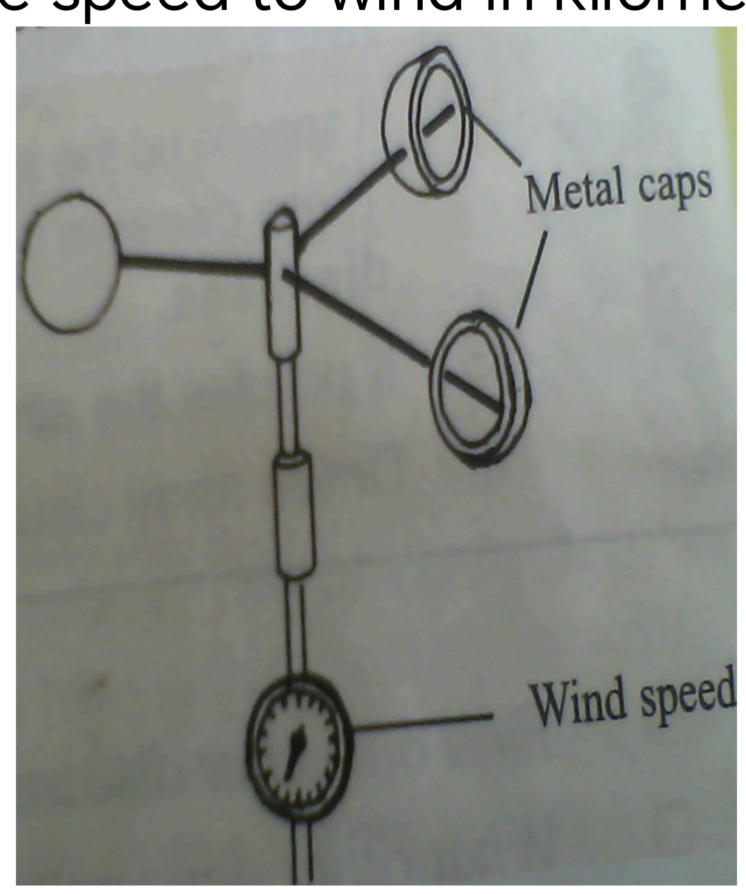
hi5educentre256@gmail.com



- **Wind sock**
  A wind sock shows the direction of wind



- **Anemometer**
  Anemometer measures the speed to wind in kilometers



Uses/advantages of wind

- ✓ Wind helps in rain formation.
- ✓ Wind helps in flying kites and balloons.
- ✓ It drives away bad smell.
- ✓ Some boats are driven by wind.
- ✓ It helps in drying clothes.
- ✓ Wind helps in wind dispersal.
- ✓ It helps in pollination of flower by transferring pollen grains.

Dangers of wind

hi5educentre256@gmail.com

- ✓ Strong wind can blow roofs off houses
- ✓ It pollutes the atmosphere by raising dust
- ✓ Wind causes soil erosion
- ✓ It breaks tree branches
- ✓ It drives away clouds that would bring rain
- ✓ It speeds up the spread of diseases like measles and tuberculosis (Airborne diseases)

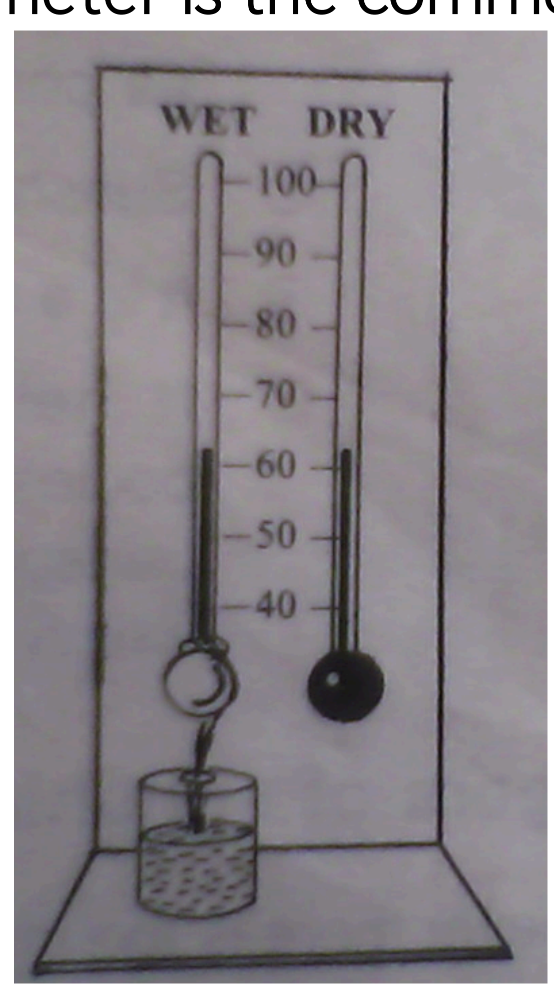
Other instruments

Barometer

It is used to measure air pressure.
Air pressure is the force of air against any surface from any direction

Hygrometer

A hygrometer is used to measures humidity
Humidity is the amount water vapour in the atmosphere
The wet and dry bulb thermometer is the common type of hygrometer



Thermometer

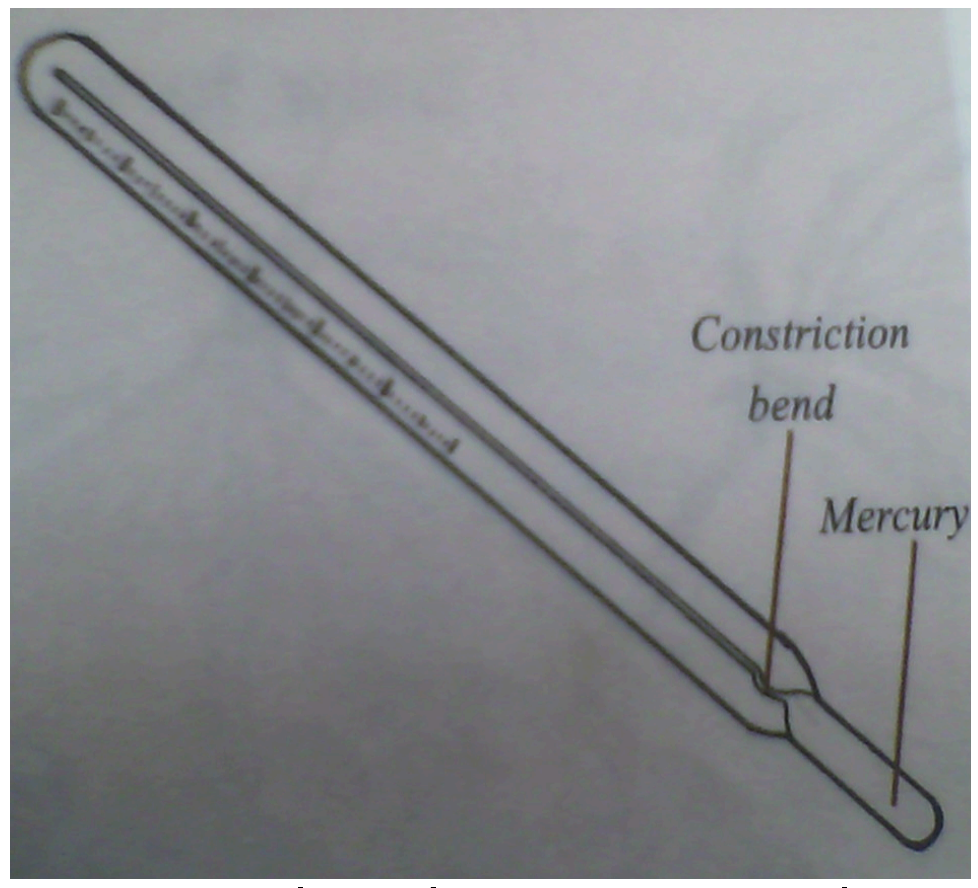
A thermometer is used to measure temperature
Temperature is the hotness or coldness of a place or object
It is measured in degrees

hi5educentre256@gmail.com

Types of thermometer
Clinical thermometers

It is also called the doctor's thermometer
It is used to measure the temperature of a human body
The normal body temperature is 37^0C OR 98.4^0F

A Clinical thermometer



A clinical thermometer can used either centigrade or Celsius scale and the Fahrenheit scale

Places where the thermometer is placed

- In the armpit
- In the anus
- In the vagina

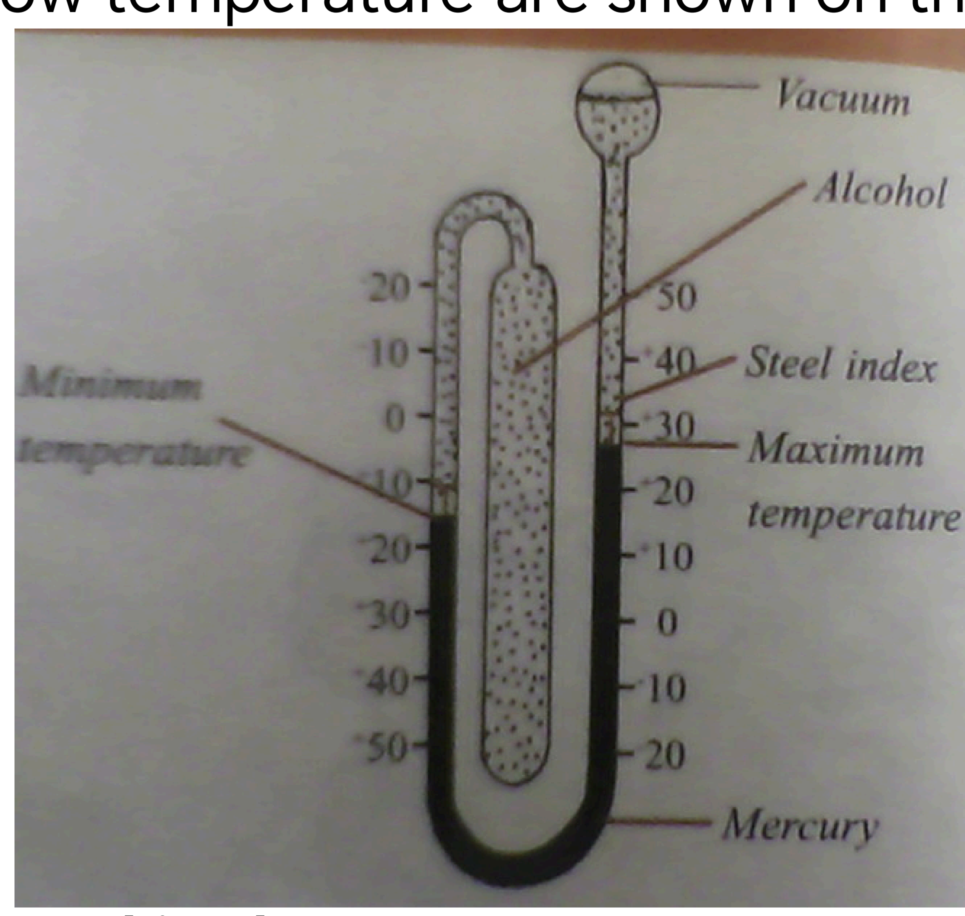
Note: The kink prevents the back flow of mercury before the doctor reads temperature

Why is the bulb thin? So that the mercury warms up quickly

Why is the bore very narrow? To have an accurate scale

The six's thermometer or maximum and minimum thermometer

It is used for measuring the atmospheric temperature temperatures we shown on the maximum side while low temperature are shown on the minimum side



Reasons why mercury is used in thermometers

Mercury is a liquid metal or a metal liquid. It has the following advantages over alcohol

Mercury **Alcohol**

Mercury is coloured and it is easily seen — Alcohol is colourless
Mercury does not wet or stick to the glass — Alcohol wets the glass
Mercury is a good conductor of heat and it expands

Easily — Alcohol does not expand

Advantages of alcohol over mercury

Alcohol does not solidify easily
Alcohol expands faster

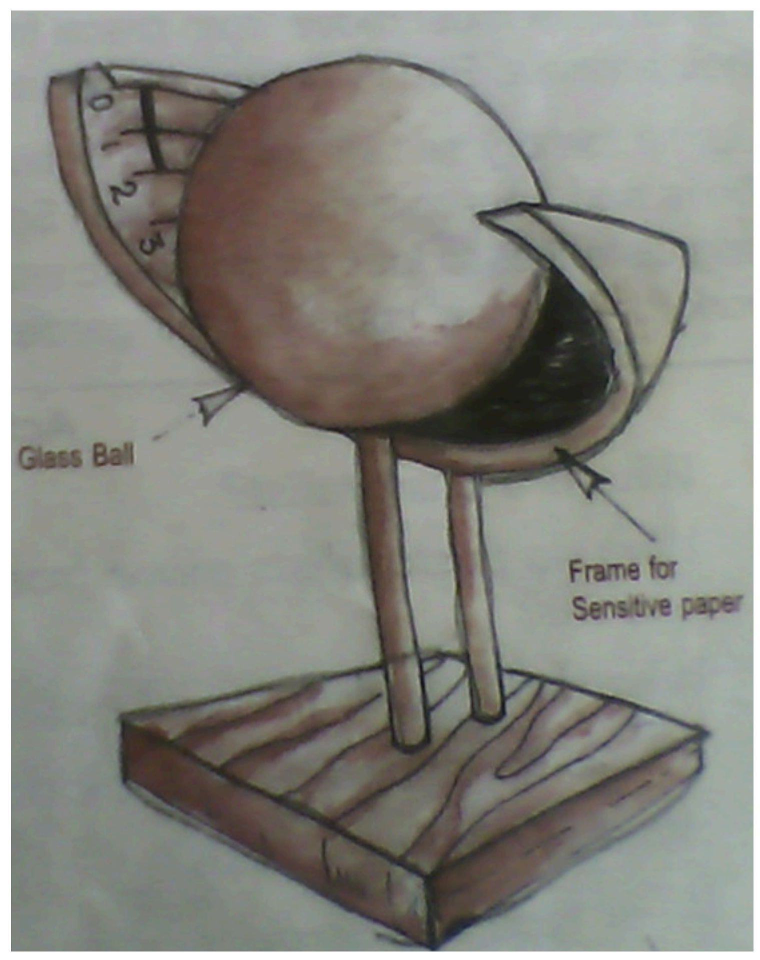
Sunshine recorder (Campbell's Sunshine recorder)
It is used to record the number of hours the sun shines a day



Advantages/uses of sunshine

- The sun gives us light and heat
- It helps plants to grow
- Sunshine helps in formation of rain through evaporation
- It helps us to dry our crops after harvesting for example coffee, cotton beans, soya etc
- Fishermen dry their fish in the sun
- Sunshine helps do dry our clothes

Disadvantages of sunshine

- Too much sunshine dries the water in the soil causing plants to wither
- It dries up wells and lakes
- Too much sunshine causes drought

Activities done in the dry season

- Harvesting
- Preparing land for next season

The weather station

A weather station is a place where weather records are measured and recorded

Terms used:

Weather forecast

This is the telling of future weather changes
It helps a farmer to know when to plant/harvest their crops

Meteorology.

Meteorology is the study of weather conditions

Meteorologist.

Meteorologist these are people who study weather conditions

Climate

Climate is the average weather condition of a place recorded for a long period of time.

How is important is a weather station?

A **weather station** is a place where weather elements are measured and recorded

The Stevenson screen

Delicate weather instruments are kept in the Stevenson screen
These are: Hygrometer, Barometer Six's thermometer
A Stevenson screen is painted white to reflect light and regulate heat

Why is a Stevenson screen put in an open area a way from buildings and trees

A Stevenson screen

A Stevenson screen has openings all round to allow in fresh air

Revision question

1. Define the term weather
2. Write down the four types of weather
3. How are nimbus clouds important to farmers?
4. Identify any two elements of weather
5. Write any one danger of clouds
6. Mention the three types of rainfall
7. Where is convectional rainfall received
8. What name is given to the line that separates the two air masses during the formation of cyclonic rainfall?
9. Give two advantages of rainfall
10. Write another word of mean relief rainfall
11. How useful is rainfall to the people of Uganda

hi5educentre256@gmail.com

12. What is a rain gauge?
13. How is moving air called?
14. Write the instruments for measuring for the following
    a) Speed of wind
    b) Air pressure
    c) Direction of wind
    d) Humidity
    e) Temperature
15. Write down the two liquids used in thermometers
16. What is the use of the constriction on the thermometer?
17. Why is the bore very narrow?
18. Give two advantages of sunshine
19. Why is mercury used in the thermometers?
20. How is sunshine advantageous to us?
21. How is weather forecast important to a farmer?
22. Define the following
    a) Meteorology
    b) Meteorologist
    c) Climate
23. Why is the Stevenson screen painted white?

END
