CHEMISTRY

Paper 2 (Practical)

2 hours

**INSTRUCTIONS TO STUDENTS:**

This paper consists of only one compulsory item.

Answers are to be written in the spaces provided.

**ITEM 1**

For effective cleaning of acid spillages in a chemical industry, the cleaning staff use sodium thio sulphate as part of the cleaning solution. However, there is a growing concern about the increasing acidity of the wash-off from the industry, posing an environmental threat.

A team member suggests that the effectiveness of the cleaning solution could be increased by increasing the concentration of sodium thio sulphate in the cleaning solution.

You are provided with:

BA1 – sodium thio sulphate solution,

BA2 – hydrochloric acid solution, conical flasks

Other laboratory apparatus

***Task;*** Design and carryout an experiment that can be used to prove the team member's suggestion.
