P630/1 CLOTHING AND TEXTILES

SCORING GUIDE FOR THE SAMPLE PAPER

Item 1

a) To attain the highest level of achievement, a candidate is expected to give a brief introduction about the challenge in the scenario, present the idea, explain it with an example, identifying pre-existing, current and emerging cycles and trends in fashion, generating fashion ideas based on trend analysis to solve textile needs, incorporate cultural and global influences into fashion ideas and respect and appreciate fashion trends in the diverse groups.

Sample Responses

Introduction

For a school ceremony with the traditional leader as chief guest, the teachers' attire should show respect for culture, maintain formality, and reflect the dignity of both the school and the occasion.

The following are some of the suitable design features for such attire:

Use of Barkcloth or Kente-style fabric accents:

Barkcloth is a traditional Buganda material with cultural significance. Using it shows respect to the Kingdom and signals cultural pride. It also makes the attire look ceremonial rather than everyday.

For example, plain navy or maroon teacher's suit with barkcloth trim on the collar, cuffs, or as a sash for female teachers.

Modest, structured silhouettes(shapes)

Ceremonies involving traditional leaders require modesty and formality. Structured designs like tailored blazers, long skirts, or gomesi-inspired dresses convey respect and professionalism while avoiding anything too casual or revealing.

For example, female teachers in long-sleeved gomesi with a sash, or male teachers in tailored suits with long trousers and a clean shirt.

Subdued, dignified color palette

Bright, flashy colors can look informal and distract from the guest of honor. Such occasions for example in Buganda tradition, favour deep, dignified colors like maroon, navy blue, gold, cream, and forest green that reflect order and respect. A maroon dress with gold embroidery would align with Buganda colors while remaining formal.

Minimal, symbolic embroidery or detailing

Embroidery with cultural motifs like the drum, shield, or plant patterns adds meaning without being over-decorative. It shows cultural awareness and makes the attire ceremonial.

For example, a simple embroidered motif of the Buganda drum on the pocket of a blazer or at the hem of a gomesi.

Coordinated but non-uniform look

Having a common design element across teachers shows unity and school identity, but allowing slight variation keeps it practical and respectful for individuals. It avoids the casual look of mismatched outfits while respecting that not all teachers wear the same size or style.

For example, all teachers use the same barkcloth sash color and width, but wear it with their own formal attire – some with suits, others with gomesi or dresses. These features balance cultural respect, formality, and practicality for a school setting.

b) A candidate is expected to:

To attain the highest level of achievement, a candidate is expected to give a brief introduction about the challenge in the scenario, present the idea, explain it with an example, incorporating cultural and global influences into fashion ideas and respect and appreciate fashion trends in the diverse groups

Introduction

Design features are shaped by several factors that influence what's appropriate and effective for a ceremony.

For a ceremony in a school with the traditional leader of an area as chief guest the following factors should be considered while choosing the design of an attire for the hosts.

Cultural context and royal protocol

Different areas have specific cultural symbols, colors, and materials tied to their identity. For example in Buganda, Barkcloth, the drum, and colors like maroon and gold are recognized within the Kingdom. Using these features shows respect for the King and avoids unintentional cultural disrespect. Royal protocol also demands modesty and formality when in the presence of the Kabaka, so design features must reflect that standard. 2. Nature of the event

Settings of the occasion:

A school ceremony with a royal guest is formal and ceremonial, not casual or sporty. The event's purpose is to honor the guest, celebrate the school, and maintain order. This pushes the design toward structured silhouettes, dignified colors, and minimal detailing rather than trendy or casual styles.

School identity and unity:

Schools often want teachers to look unified to present a cohesive image to guests and students. Coordinated elements like a common sash color or fabric accent create that unity without requiring identical uniforms. It also reinforces the school's brand and professionalism.

Modesty and professionalism expectations:

Teachers are role models, and in Ugandan school settings, modest dress is the norm, especially for formal events. Design features like long sleeves, high necklines, and long skirts/trousers meet both cultural expectations and professional standards for educators.

Symbolism and communication:

Every detail on ceremonial attire communicates something. Embroidery of Buganda symbols, for example, communicates cultural awareness and respect. Colors communicate dignity and seriousness. This is why symbolic but restrained detailing is preferred over loud prints or logos.

Practicality and wearability:

Teachers will be standing, speaking, and interacting for hours. Fabrics and silhouettes need to allow movement, be comfortable in the climate, and be easy to maintain. That's why features like breathable fabrics, structured but not restrictive cuts, and durable trims are factored in.

Cost and accessibility:

Schools and teachers have budget limits. Using accents of traditional fabric on standard formal wear is more realistic than requiring full traditional regalia for all staff. This factor shapes the design toward adaptable, cost-effective features that still look ceremonial

Items 2

a) To attain the highest level of achievement, a candidate is expected to give a brief introduction about the challenge in the scenario, present the idea, explain it with an example, in relation to the different types of yarn structures, the relationship between yarn properties and their suitability for specific products

Sample Responses

Introduction:

To correct creasing, rapid wear, clinging, and discomfort in heat, one needs yarns with specific physical and functional qualities. The problem is usually solved by blending fibers or selecting fibers with the right properties.

The qualities of yarn to look for in this case are;

High resilience / elastic recovery to solve creasing:

Yarn made from fibers with good elastic recovery bounces back after being bent or compressed.

Resilient fibers don't hold fold lines, so the fabric resists wrinkling. For examples, wool, polyester, nylon, and blends with spandex. Wool is naturally crimped, so it springs back. Polyester has low moisture absorption, so it doesn't set in creases easily.

High abrasion resistance and tensile strength - to solve wearing out quickly:

Strong fibers with good fiber-to-fiber cohesion and low fiber breakage under friction. Stronger yarns withstand repeated rubbing and washing, so the fabric lasts longer. For examples, Nylon has the highest abrasion resistance of common fibers. Polyester and cotton-polyester blends are also durable. A tighter twist in the yarn also increases strength and wear resistance.

Low electrostatic charge and smooth surface - to solve clinging:

Fibers that don't build up static electricity and have a smooth, less hairy surface.

Static cling happens when dry fibers gain charge. Smooth, moisture-regulating fibers reduce this. For example, natural fibers like cotton, wool, and viscose absorb moisture and dissipate static. Synthetic yarns can be treated with anti-static finishes or blended with natural fibers to reduce cling. Low-twist yarns are also less prone to static than high-twist yarns.

High moisture absorbency and breathability - to solve discomfort in hot weather:

Fibers that absorb moisture, wick it away from the skin, and allow air circulation. Sweat is pulled away and evaporates, cooling the body. Breathable yarns don't trap heat against the skin. For example, cotton, linen, bamboo, and viscose are highly absorbent and breathable. Open structure yarns like slub or low-twist yarns increase air flow. Moisture-wicking polyester microfibers are also used in activewear for hot weather.

Moderate twist and smooth finish:

Yarn with a medium to low twist and minimal hairiness. Low twist makes fabric softer and more breathable for hot weather. Smooth yarns reduce friction against skin, so they don't cling or feel scratchy. High twist increases stiffness and crease resistance but can reduce comfort, so a balance is needed

b) A candidate is expected to:

To attain the highest level of achievement, a candidate is expected to give a brief introduction about the challenge in the scenario, present the idea, explain it with an example, and describe fibre processing techniques that produce high-quality yarns with

precise control over fibre characteristics such as sustainability, durability, or aesthetic appeal.

Required to describe a yarn production process from raw fibre. For example, if the suitable yarn is a blend of cotton and polyester, describe the process of getting cotton yarns from raw cotton then show how it can be blended with polyester to get the desired quality.

Items 3

- a) *To attain the highest level of achievement, a candidate is expected to give a brief introduction about the challenge in the scenario, present the idea, explain it with an example, in relation to the different ways in which soft furnishings can be used to create an appealing, aesthetic and comfortable sitting room.*

SAMPLE RESPONSES

Introduction:

Soft furnishings are the “clothes” of your sitting room — they add warmth, color, texture, and comfort without major renovations. The following are the ways one can use them to create an appealing, aesthetic and comfortable sitting room:

Layer rugs to define zones and add warmth.

A rug anchors your seating area visually and softens hard floors. Layering a smaller patterned rug over a large neutral one adds depth and makes the space feel cozy underfoot. For example, place a large 8x10ft jute rug to cover most of the floor, then add a 5x7ft colorful wool rug under the coffee table. This defines the conversation area and feels soft when kids sit on the floor.

Use throw pillows to inject color and pattern

Cushions are the easiest way to change a room’s mood. Mix sizes, shapes, and textures to create visual interest. Odd numbers like 3 or 5 look more curated than pairs. For example, on a plain beige sofa, add 2 large 24" linen pillows in terracotta, 1 medium velvet pillow in navy, and 2 small printed pillows with geometric patterns. It makes the sofa look styled and more comfortable to lean on.

Hang curtains to soften walls and control light.

Floor-to-ceiling curtains make ceilings feel higher and rooms bigger. Heavy fabrics add coziness, while sheer ones diffuse harsh sunlight and create a soft glow. For example, install double curtain rods: sheer white curtains inside for daytime privacy + thick mustard velvet drapes outside. Pull the velvet closed at night for a warm, intimate feel. **Drape**

throws for texture and casual comfort.

A throw blanket adds a lived-in, inviting look. The texture invites people to relax, and it’s functional on cold evenings. Drape it casually rather than folding perfectly. For example, toss a chunky knit throw over the arm of an accent chair. It breaks up the chair’s solid color and signals “sit here and get comfy”

Upholster seating to improve comfort and style.

The fabric on sofas and chairs impacts both looks and how the room feels. Soft, durable fabrics make seating more inviting to use for long periods. For example, reupholster an old wooden bench in a bouclé fabric and add a foam cushion. It turns a hard, formal piece into a cozy spot for extra guests.

Add fabric wall hangings or tapestries for acoustic comfort.

Soft furnishings absorb sound, reducing echo in rooms with tile or concrete. A textile on the wall adds art while making conversation easier and the room quieter. For example,

hang a large woven wall tapestry behind the sofa instead of a painting. It adds color, pattern, and stops the room from sounding hollow.

Use poufs and floor cushions for flexible seating

Soft, movable pieces make the room adaptable for guests and create a casual, relaxed vibe. They're less formal than chairs and can be tucked away. For example, keep 2 leather poufs and 3 large floor cushions in a basket. Pull them out for movie night so kids can lounge, then store them to open up floor space.

b) To attain the highest level of achievement, a candidate is expected to candidate is expected to give a brief introduction about the challenge in the scenario, and describe a yarn production proces from raw fibre. For example, if the suitable yarm is a blend of cotton and polyester, describe the process of getting cotton yarns from raw cotton then show how it can be blended with polyester to get the desired quality.
