SECTION A

Item 1

Fruits such as pineapples and guavas are commonly used to prepare juice because they are rich in vitamin C, which strengthens the body's defences. The Business Club of Kyengera High School produces juice for sale to students. However, sales drop during cold weather, and when the juice is stored for several days, it develops a foul taste and odor. They attempted to use citric acid extracted from oranges, but the problem persisted. They were advised to add potassium sorbate, though the club chairperson is concerned about possible side effects, while other members want to understand how the two products differ.

Task

a) Identify the category of the suggested alternative product.

b) State the function of the alternative product.

c) Explain the challenge associated with continuous use of the alternative product.

d) Guide the club members to evaluate the alternative product compared with the one they have been using.

Item 2

The choice of materials in everyday life depends on their properties and how they interact with the environment. The table below shows part of the periodic table, including substances important in construction, fertilizer manufacture, and other uses.

I	II	III	IV	V	VI	VII
	R	S		U		V

Students were asked to select the most appropriate substance for making window and door frames and to discuss its environmental impact. Your friend has asked you to guide them.

Task

a) Explain the category to which the chosen substance belongs.

b) Suggest the properties that make the substance suitable for construction.

c) State another everyday application of the substance.

d) Suggest one danger of the material to the environment and a possible mitigation measure.

SECTION B

PART I

(Attempt only one item from this section)

Item 3

The government has promised roofing sheets to former cattle rustlers in Karamoja who embraced peace. To supply them, a private company has been licensed to set up a plant in Tororo to extract iron from ore. A workshop was organized for students and residents to raise awareness. Students wanted to know the industrial steps for removing impurities and purifying iron, while residents were concerned about waste disposal and community benefits. You have been chosen to help in the sensitization.

Task

Write a sensitization piece addressing the industrial process, waste management, and community benefits.

Item 4

Uganda's economy relies heavily on agriculture, with crops such as tea and maize being major exports. To boost yields, farmers plan to use ammonium nitrate fertilizer. The government intends to supply it but must first sensitize farmers about its industrial manufacture, waste management, and community benefits. Your school has nominated you to assist.

Task

Prepare a write-up for the sensitization program.

PART II

(Attempt any one item from this part)

Item 5

Brick making requires water to bind clay, and many brick makers operate near rivers and wetlands to ensure supply. However, the activity has negative environmental impacts. Schools have launched a campaign to promote sustainable brick making, and you have been selected to represent your school.

Task

Write a campaign message explaining sustainable practices in brick making.

Item 6

Coal is a major energy source for industries, boosting productivity and meeting community needs. However, overreliance on coal has harmful environmental effects. Your school has nominated you to join a sensitization team to educate the community on mitigation measures.

Task

Write a sensitization piece highlighting the impacts of coal use and possible solutions.
