

CLIMATE OF AFRICA

TOPICAL QUESTIONS

NAME: _____

CLASS: _____ YEAR: _____

SCHOOL: _____

TEACHER'S NAME: _____

TERM: _____ STREAM: _____

CLIMATE OF AFRICA

1. What is weather?

This is the state of atmosphere at a given time and place

Or: This is the state of atmosphere recorded for a short time

2. Define the following terms;

a) Meteorology

This is the scientific study of weather and its elements

Or: This is the scientific study and recording of weather elements

b) Meteorologist

This is a person who carries out the scientific study of weather and its elements

3. What is a meteorological station?

This is a place where weather forecasting and meteorology are carried out

4. Where is the biggest meteorological station in Uganda?

At Entebbe

5. What is weather forecasting?

This is the prediction of future weather changes

6. Name the place where weather forecasting is carried out.

Meteorological station

7. Mention four groups of people who need weather forecasting in their work.

- Sailors
- Pilots
- Travelers
- Farmers
- Road builders

8. How is weather forecasting important to the following groups of people?

a) Sailors

It helps sailors to know when to sail / to know the right weather for sailing

b) Pilots

- It helps pilots to plan for their flights
- It helps pilots to know when to fly the planes

c) Farmers

- It helps farmers to plan for the next conditions
- It helps farmers to know when to plant and harvest

d) Traveler

It helps travelers to know the dress code

e) Students

- It helps students to know different weather instruments
- It helps students to get set for the coming weather conditions

9. What term do we use to mean prediction of future weather changes?

Weather forecasting

10. List down four types of weather.

- Rainy weather
- Windy weather
- Misty weather
- Sunny weather
- Cloudy weather
- Foggy weather

- Humid weather

11. Mention four conditions of weather.

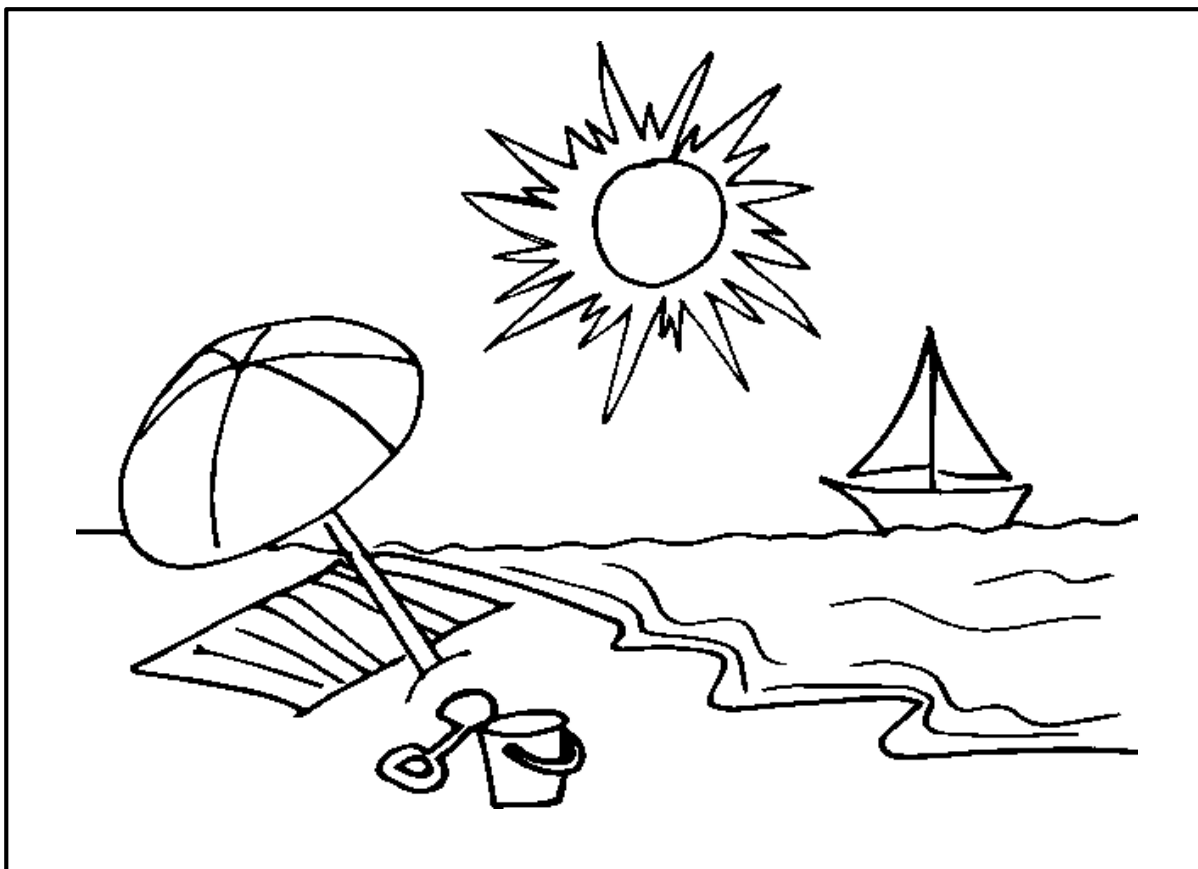

- Rainy
- Sunny
- Windy
- Cloudy
- Misty
- Foggy
- Humid

12. Write down four elements of weather.

- Fog
- Rainfall
- Cloud cover
- Mist
- Humidity
- Air pressure
- Wind
- Sunshine
- Temperature

Sunny wEAther

13. Name the type of weather below.

Sunny weather

14. What condition of weather helps farmers to dry harvested crops?

Sunny

15. State two importance of sunny weather.

- It dries wet clothes
- It dries harvested crops
- It provides solar energy

16. Give three negative effects of sunny weather.

- It dries crops
- It leads to famine
- It leads to drought
- It leads to desertification

17. What do you understand by the term desertification?

This is the turning of an area with vegetation to a desert

RAIny wEAtHER

18. Name the condition of weather shown below.

Rainy

19. Name the aspect of weather which influences population distribution.

Rainfall

20. Outline three importance of rainy weather.

- It softens the soil
- It supports plant growth
- It provides water to people

21. Suggest three disadvantage of rainy weather.

- It leads to floods
- It leads to landslides
- It leads to death of people and animals

INFLUENCE OF WEATHER TO PEOPLE DURING RAINY DAYS

22. How does weather influence people during rainy days?

- People put on heavy clothes on rainy days
- People plant their crops
- People weed their gardens

23. Give four ways people protect themselves from harsh rainy days.

- By wearing rain coats
- By using umbrellas
- By wearing heavy clothes

24. Why do people wear heavy clothes on rainy days?

To keep the warmth of the body

INFLUENCE OF WEATHER TO PEOPLE DURING SUNNY DAYS

25. How does weather influence people during sunny days?

- People put on light clothes on sunny days
- People harvest their mature crops
- People dry their harvests
- People irrigate their crops
- People prepare their land for farming

26. Give four ways people protect themselves from harsh sunny days.

- By wearing hats
- By using umbrellas
- By wearing sunglasses
- By wearing light clothes

27. Why do people wear light clothes during sunny days?

To regulate the body temperature

28. Why do people wear hats during sunny days?

To protect their heads from strong sunshine

INFLUENCE OF WEATHER TO PEOPLE DURING WINDY DAYS

29. How does weather influence people during harsh windy days?

- People winnow their harvested seeds
- People wear heavy clothes like jackets
- People harvest their mature crops
- People are helped to run wind mills

30. Give four ways people protect themselves from harsh windy days.

- By wearing jackets
- By planting trees in their compounds

INFLUENCE OF WEATHER TO PEOPLE DURING CLOUDY DAYS.

31. How does weather influence people during harsh cloudy days?

- People wear heavy clothes like jackets

32. Why do people wear heavy clothes on cloudy days?

To keep the warmth of the body

WEATHER ELEMENTS AND THEIR INSTRUMENTS

33. List down four elements of weather.

- | | | |
|---------------|-------------------|-----------------------|
| - <u>Fog</u> | - <u>Rainfall</u> | - <u>Cloud cover</u> |
| - <u>Mist</u> | - <u>Humidity</u> | - <u>Air pressure</u> |
| - <u>Wind</u> | - <u>Sunshine</u> | - <u>Temperature</u> |

34. What are weather instruments?

These are equipment used to measure and study atmospheric conditions

35. Mention eight weather instruments at a weather station.

- Hygrometer
- Barometer
- Ceilometer
- Wind vane
- Windsock
- Sunshine recorder
- Rain gauge
- Anemometer

36. Give the meaning of the term weather station.

This is a place where weather elements are studied, measured and recorded

CLOUD COVER

37. What are clouds?

Clouds are layers of water vapour that float in the atmosphere

38. Mention five types of clouds in the atmosphere.

- Nimbus clouds
- Stratus clouds
- Cumulus clouds
- Cirrus clouds
- Cumulo-nimbus clouds

39. Name the clouds that bring rainfall.

Nimbus clouds

40. How are Nimbus clouds important to farmers?

They bring rainfall which helps farmers' crops to grow well

41. Name the lowest type of clouds in the atmosphere.

Nimbus clouds

42. Identify the highest clouds in the atmosphere.

Cirrus clouds

43. Name the clouds in the atmosphere which bring drizzling.

Stratus clouds

44. Give the clouds that look like cotton wool in the sky.

Cumulus clouds

45. State two importance of clouds.

- They bring rainfall
- They protect people from direct sunshine
- They reduce temperature in some areas

46. Outline two dangers of clouds.

- They cause lightning which strike people
- Large and dark clouds cause planes to crash

47. Name the weather instrument used to measure the thickness of clouds.

Ceilometer

48. How is the ceilometer important to the meteorologists?

It is used by the meteorologists to measure the thickness of clouds

AIR PRESSURE

49. Give another term used to refer to air pressure.

Atmospheric pressure/Barometric pressure

50. Give the meaning of the term air pressure.

Air pressure is the force and weight exerted by air on the earth's surface

51. How does altitude affect air pressure?

The higher the altitude, the higher the air pressure and vice versa

OR: Areas with high altitude have high air pressure and vice versa

52. What is altitude?

Altitude is the height above the sea level

53. Name the instrument used to measure altitude.

Altimeter

54. Why do some areas have high atmospheric pressure?

They lie at a higher altitude

55. Give a reason why some areas have low atmospheric pressure.

They lie at a lower altitude

56. Mention two places with high altitude.

- Mountain tops

- Hill tops

57. List down three places with low air pressure.

- Valleys

- Plains

- Equatorial zones

58. Give three things that cause difference in air pressure.

- Latitude

- Altitude

- Wind

59. State two things caused by the difference in atmospheric pressure.

- Wind blow

- Difference in temperature

60. In which units is air pressure measured?

Millibars

61. Name the instrument used to measure air pressure.

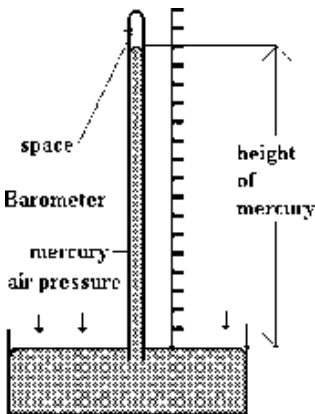

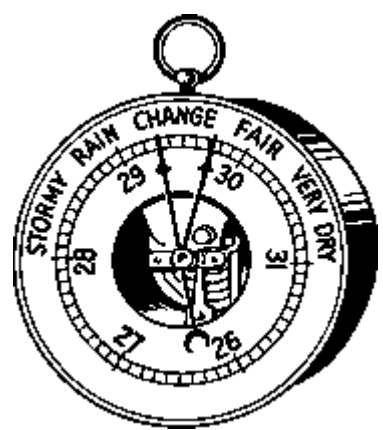

Barometer

62. Mention two types of barometer.

- Mercury barometer

- Aneroid barometer

63. Name the types of barometer shown below.

	
<u>Mercury barometer</u>	<u>Aneroid barometer</u>

INTER TROPICAL CONVERGENCE ZONE

64. Write ITCZ in full.

Inter Tropical Convergence Zone

65. What is another name for the Inter Tropical Convergence Zone?

Doldrum

66. Give the meaning of the term doldrum.

Doldrum is an area of low pressure along the Equator where the North East and South East trade winds meet

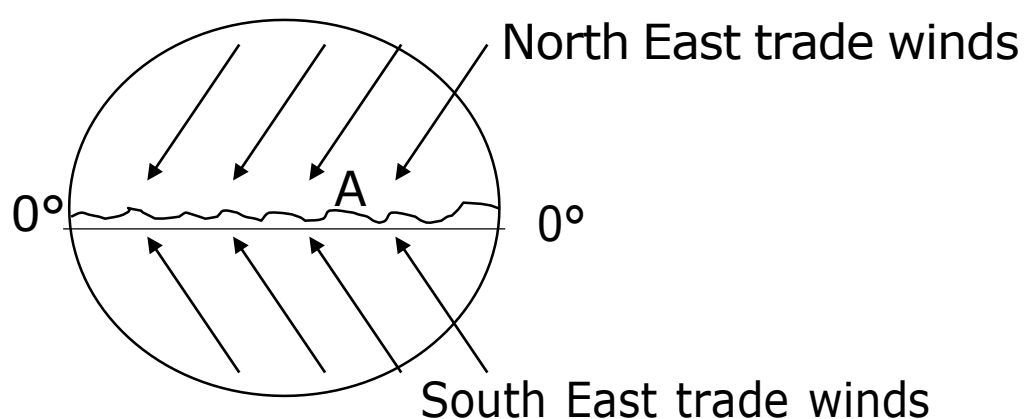

67. What term is used to mean an area of low pressure along the Equator where the North East and South East trade winds meet?

Doldrum / ITCZ

68. Mention two trade winds that meet at the doldrum.

- North East trade winds
- South East trade winds

69. Study the diagram below and use it to answer questions

a) Name the line of latitude marked 0° above.

Equator

b) What name is given to the area marked A above?

Doldrum

c) Give a reason to support your answer in "b" above.

It is an area of low pressure along the Equator where trade winds meet

HUMIDITY

70. What is humidity?

Humidity is the amount of water vapour in the atmosphere

71. In which units is humidity measured?

Grams per cubic metres

72. Write g/m³ in full form.

Grams per cubic metres

73. Why are some areas humid?

They have a lot of water vapour in the atmosphere

HYGROMETER

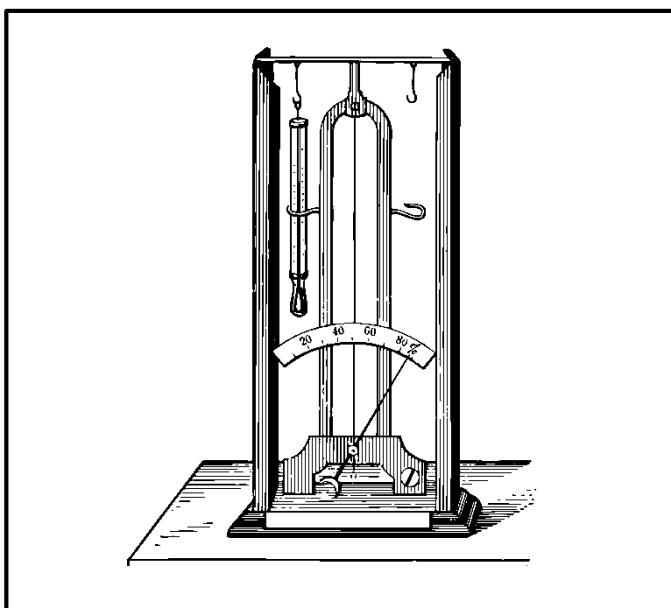

74. Name the instrument used to measure humidity.

Hygrometer

75. How is the hygrometer important at a weather station?

It is used to measure humidity

76. Name the instrument shown below.

Hygrometer

TEMPERATURE

77. What is temperature?

Temperature is the degree of hotness or coldness of an object or a place

78. In which units is temperature measured?

Degrees

79. Name two scales used on the thermometers.

- Celsius scale
- Fahrenheit scale

80. Mention three types of thermometers used by people.

- Clinical thermometer
- Six's thermometer
- Wall thermometer

81. What is another name for the clinical thermometer?

Doctor's thermometer

82. Give the different between clinical and six's thermometer.

Clinical thermometer is used to measure human body temperature yet six's thermometer is used to measure temperature of a place

Six's thermometer

83. What is another name of the Six's thermometer?

Maximum and minimum thermometer

84. List down two liquids used in the six's thermometer

- Alcohol
- Mercury

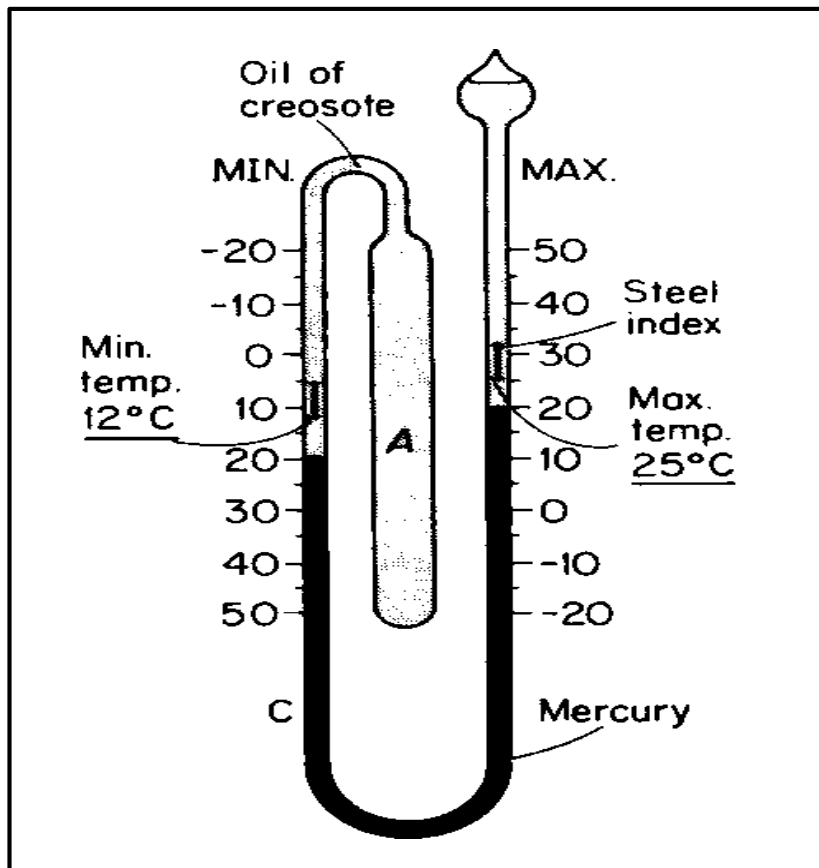

85. State three advantages of mercury over alcohol in thermometers.

- Mercury can easily be seen unlike alcohol
- Mercury is a good conductor of heat unlike alcohol
- Mercury does not stick on the thermometer wall unlike alcohol

86. Give one advantage of alcohol over mercury.

Alcohol measures low temperature which mercury cannot measure

87. Name the weather instrument below.

Six's thermometer

SUNSHINE

88. What is sunshine?

Sunshine is the heat and light energy from the sun received on the earth's surface

89. In which units is sunshine measured?

Hours

90. State five importance of sunshine.

- It dries harvested crops
- It dries wet clothes
- It provides us with vitamin D
- It provides people with solar energy
- It is used to preserve food

91. Give four dangers of sunshine.

- Too much sunshine causes drought
- Too much sunshine causes famine
- Too much sunshine causes desertification
- Too much sunshine makes seasonal rivers and seasonal lakes to dry

SUNSHINE RECORDER

92. Name the instrument used to measure the intensity and duration of sunshine.

Sunshine recorder

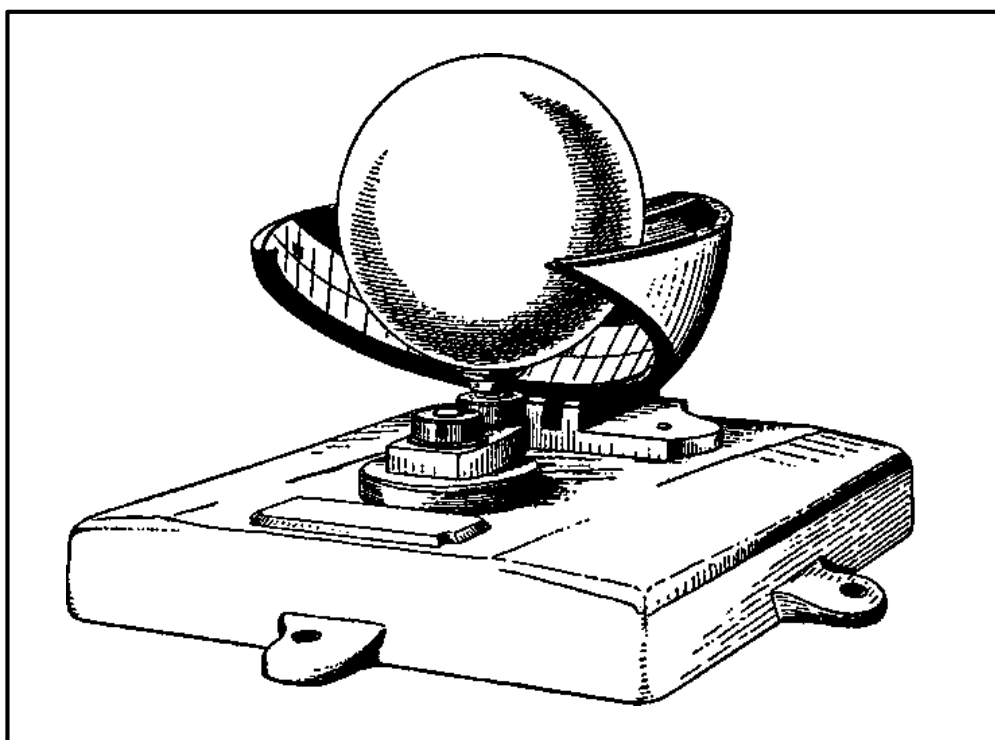

93. How is a sunshine recorder useful to the meteorologists?

It is used by meteorologists to measure the intensity and duration of sunshine

94. What is another name for the sunshine recorder?

Campbell stoke

95. Draw a sunshine recorder in the space provided below.

WIND

96. What is wind?

Wind is air in motion

Or: Wind is the moving air

97. What causes wind?

Difference in atmospheric pressure

98. How does wind blow?

Wind blows from an area of high pressure to an area of low pressure

99. State three properties of wind.

- Wind has speed
- Wind has direction
- Wind has strength

DIRECTION OF WIND

100. Mention three weather instruments used to show the direction of wind.

- Wind vane
- Windsock
- Weather cock

101. How is the function of a wind vane similar to that of a weather cock?

Both are used to show the direction of wind

WIND VANE

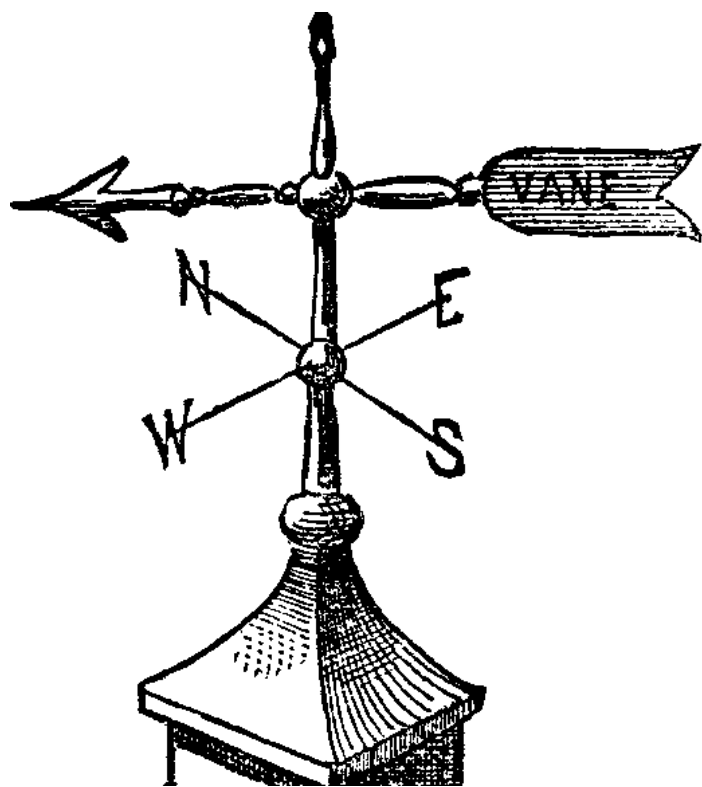

102. Name the weather instrument which is commonly used to show the direction of wind.

Wind vane

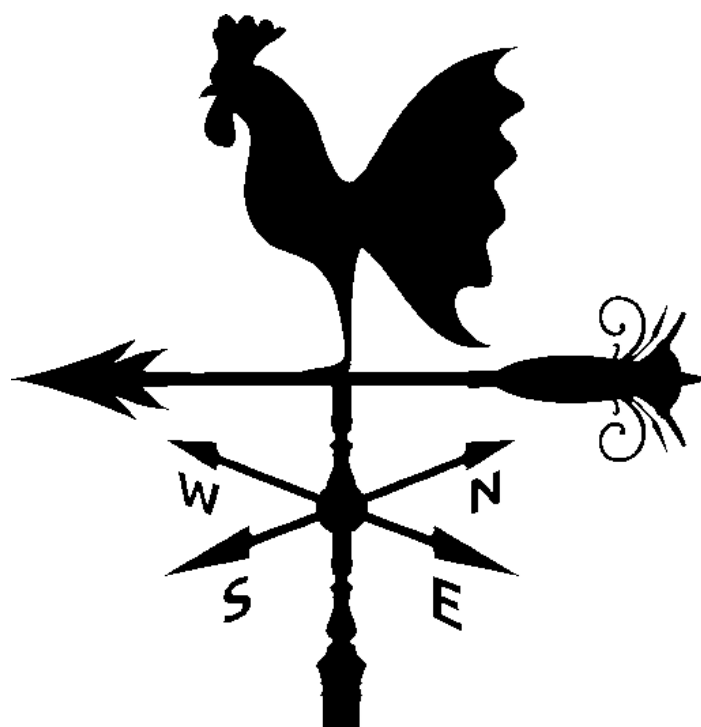

103. What is the use of a wind vane?

To show the direction of wind / It is used to show the direction of wind

104. Name the instruments shown below.

Wind vane

Weather cock

105. Identify the place where a wind vane should be put to prevent obstruction of wind by buildings and trees.

Flat open space

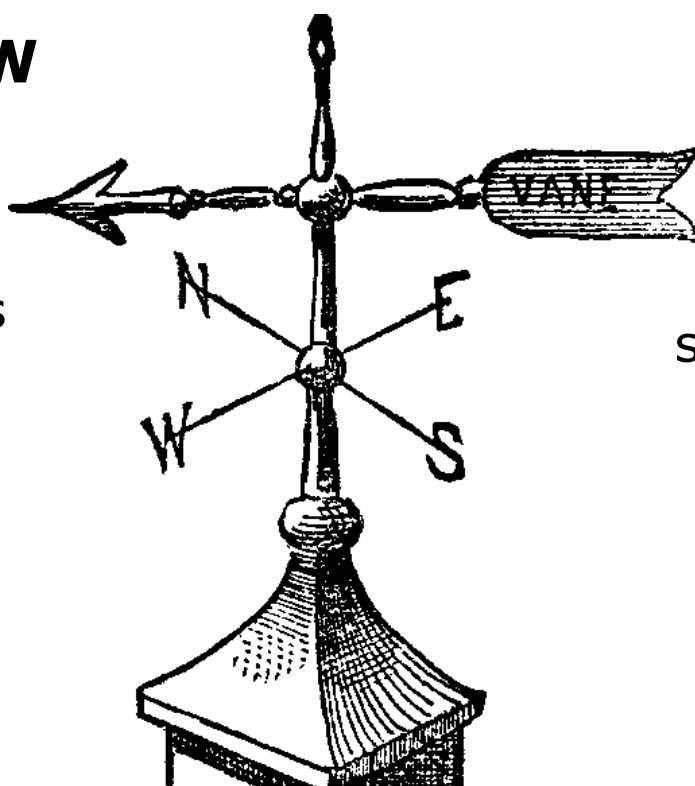

106. Why should a wind vane be placed in a flat open space?

To prevent obstruction of wind by buildings and trees

DETERMINING THE DIRECTION OF WIND USING A WIND VANE

HEAD/ARROW POINTER

shows direction
from which wind is
blowing

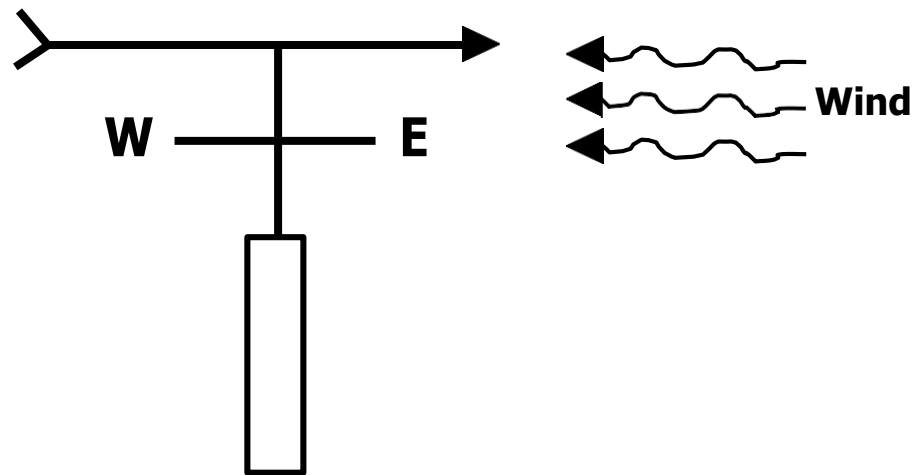

TAIL

shows direction to
which wind is
blowing

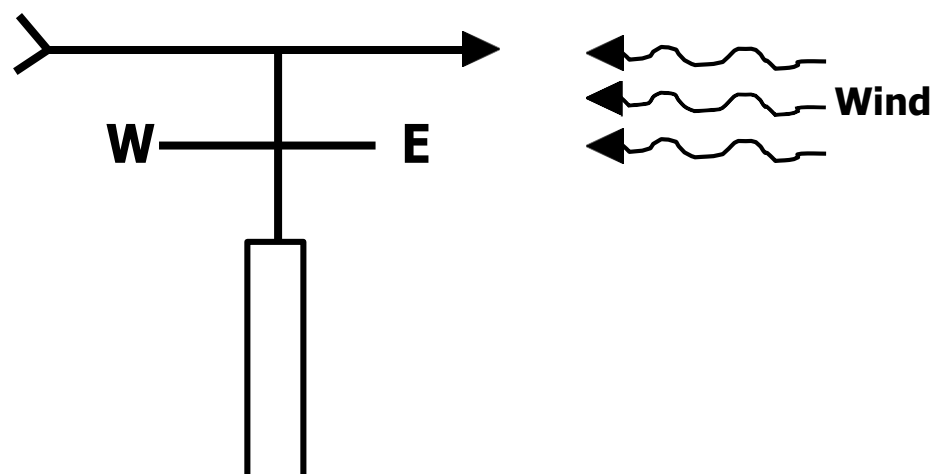

EXERCISE

107. The arrow of the wind vane was pointing to the East. From which direction was the wind blowing?

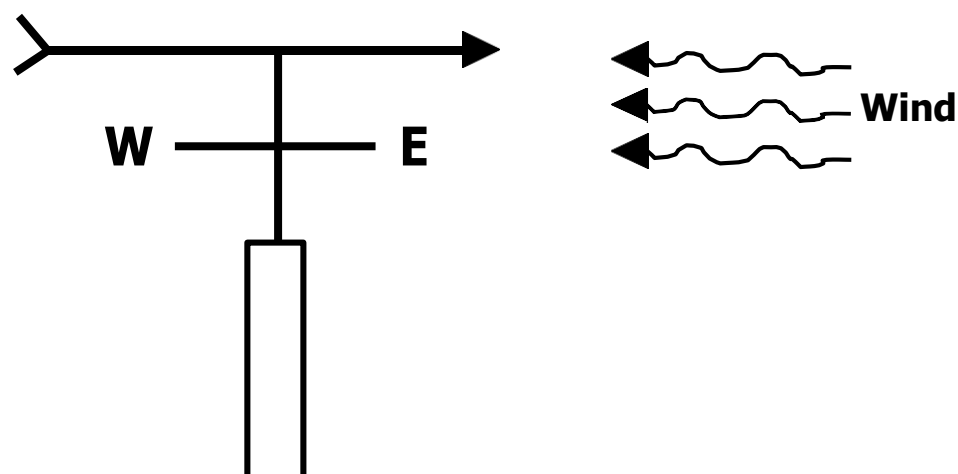

From East

108. The arrow of the wind vane was pointing to the East. To which direction was the wind blowing?

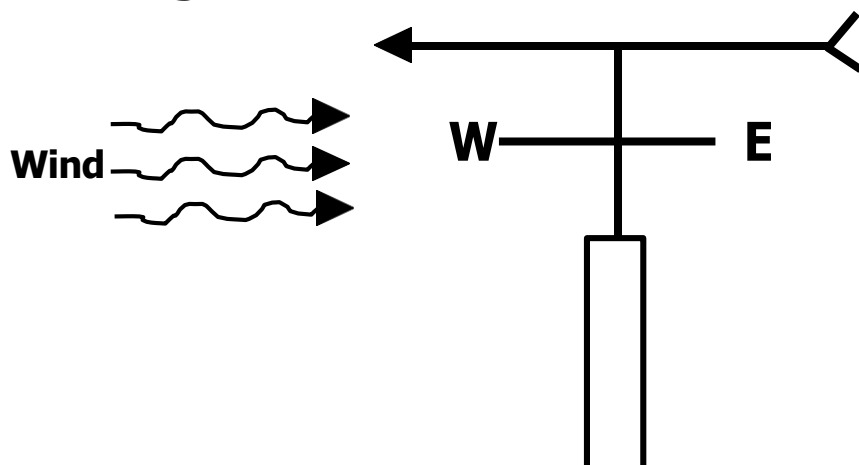

To West

109. The tail of the wind vane was pointing West. To which direction was the wind blowing?

To West

110. The tail of the wind vane was pointing to the East. From which direction was the wind blowing.

From West

STRENGTH OF WIND

111. Name the instrument used to show the strength of wind.

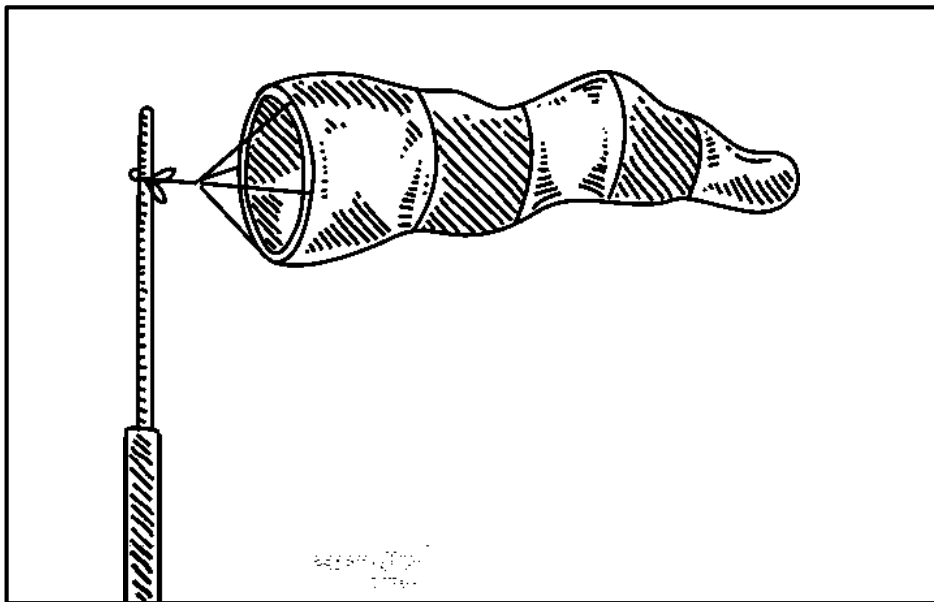

Windsock

112. Apart from showing the strength of wind, give another use of a windsock.

To show the direction of wind

winDsOck

113. Name the instrument below.

Windsock

114. Mention two colours commonly used on the windsock.

- White
- Orange

115. Why is the windsock made using bright colours?

To be visible easily from a far area

116. What is the use of a windsock?

It shows the direction and strength of wind

117. How is a windsock useful to a pilot?

It shows the direction and strength of wind to a pilot

118. List down four places where a windsock is found.

- | | |
|-------------------|----------------------------------|
| - <u>Airport</u> | - <u>Aviation schools</u> |
| - <u>Airstrip</u> | - <u>Meteorological stations</u> |

119. What is an airstrip?

An airstrip is a place where small aircrafts land and take off

120. Give three airstrips found in Uganda.

- | | | |
|--------------------------|--------------------------|----------------------------|
| - <u>Kololo airstrip</u> | - <u>Soroti airstrip</u> | - <u>Kajjansi airstrip</u> |
|--------------------------|--------------------------|----------------------------|

121. Give the meaning of the term airport.

Airport is a place where big aircrafts land and take off

122. Name the biggest airport in Uganda.

Entebbe International airport

123. Which body is in charge of air transport services at Entebbe International Airport?

Civil Aviation Authority

124. Write CAA in full.

Civil Aviation Authority

125. Where at the airport is a windsock always found?

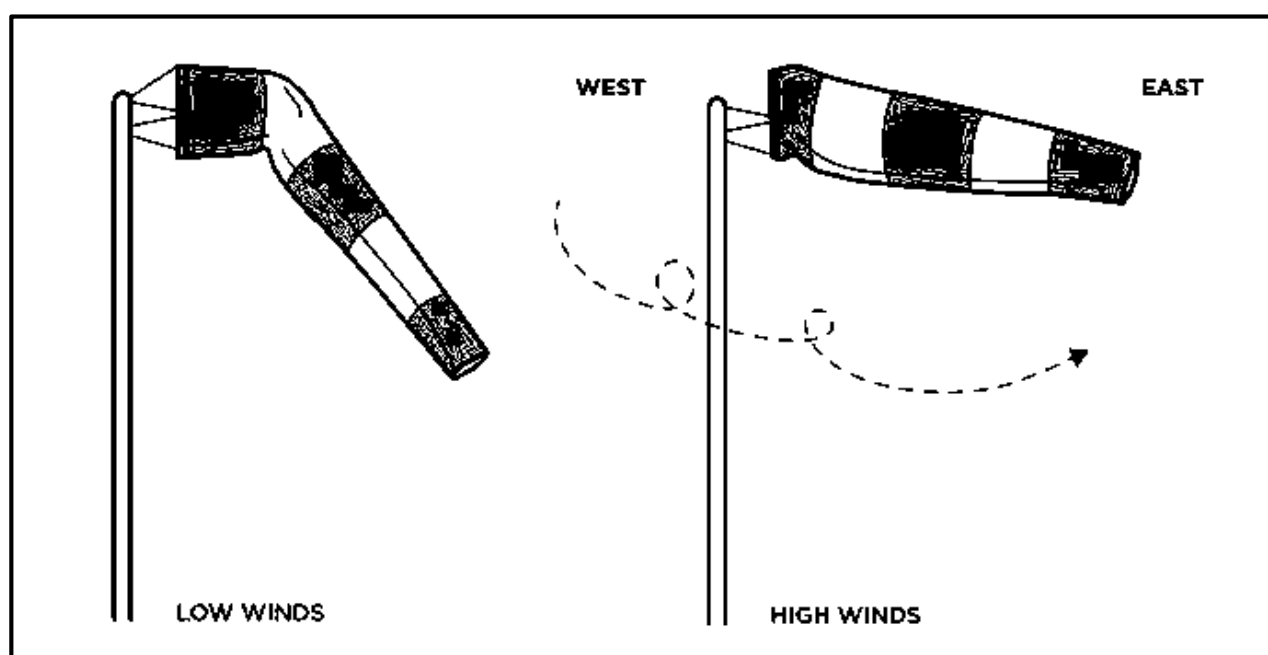

At a runway

126. What is a runway?

Runway is a road which aircrafts use to land and take off

DETERMINING THE DIRECTION OF WIND USING A WINDSOCK

127. Study the diagram below and use it to answer the questions.

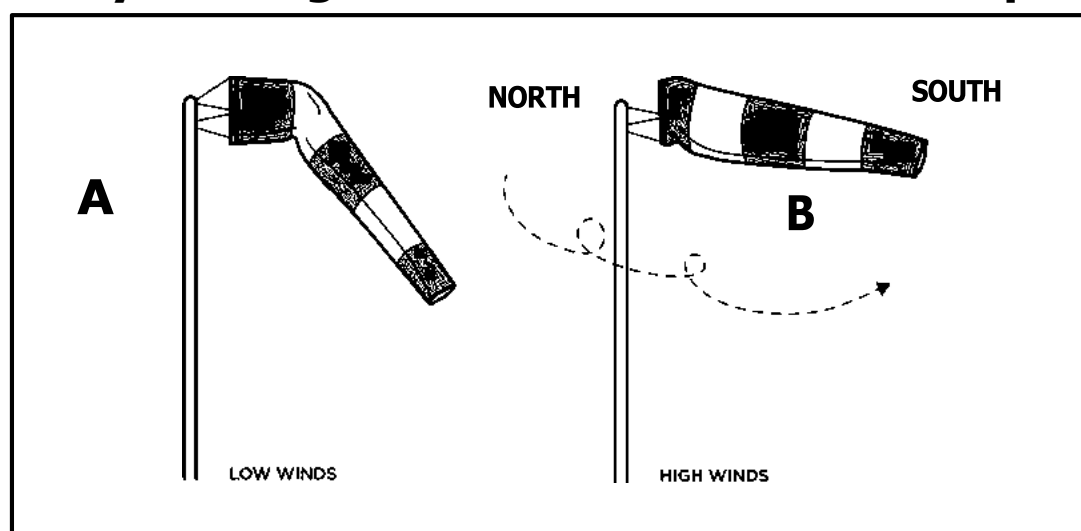

a) To which direction was wind blowing?

To East

b) From which direction was the wind blowing?

From West

128. Study the diagram below and then answer questions that follow.

a) Why did windsock A behave the way it is illustrated above?

It was in an area of low wind strength

b) Give a reason why windsock B behave the way it is illustrate above.

It was in an area of high wind strength

c) From which direction was the wind blowing in area windsock B was found?

From North

d) To which direction was the wind blowing in an area where windsock B was found?

To South

SPEED OF WIND

129. Name the weather instrument used to measure the speed of wind.

Anemometer

130. In which units is the speed of wind measured?

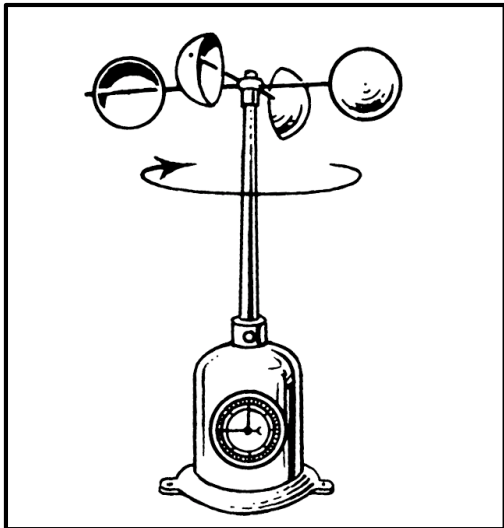

Knots

131. Apart from Knots, give other units used to measure the speed of wind.

Kilometres per hour

ANEMOMETER

132. Name the weather instrument below.

Anemometer

133. How is an anemometer useful at a weather station?

It is used to measure the speed of wind

134. Why is an anemometer placed in a flat open space?

To prevent the obstruction of wind by buildings and trees

IMPORTANCE OF WIND

135. State four importance of wind.

- Wind dries wet clothes
- Wind helps boats to sail
- Wind helps in winnowing
- Wind helps in flower pollination

DANGERS OF WIND

136. Give three dangers of wind.

- Strong winds destroy people's property
- Strong winds cause soil erosion
- Wind causes air borne diseases

RAINFALL

137. What is rain?

Rain refers to water droplets falling from the sky

138. Name the major natural source of water.

Rain

139. Give the term referred to water droplets falling from the sky that evaporate before reaching the Earth's surface.

Virga

140. Give the meaning of the term virga.

Virga refers to water droplets falling from the sky that evaporate before reaching the Earth's surface

141. What is another name for virga?

Dry rain

142. What is rainfall?

Rainfall is the amount of water droplets from the sky that has been collected, measured and recorded.

143. Mention three types of rainfall.

- Relief rainfall
- Cyclonic rainfall
- Convectional rainfall

CONVECTIONAL RAINFALL

144. Name the type of rainfall received in areas near large waterbodies and thick forests.

Convectional rainfall

145. What is convectional rainfall?

This is the type of rainfall received in areas with thick forests and large water bodies

146. State three factors that lead to the formation of convectional rainfall.

- Presence of thick forests
- Presence of large water bodies
- Presence of sunshine

147. Give three characteristics of convectional rainfall.

- It is mainly received in afternoon
- It is accompanied by lightning and thunderstorms
- It is received in areas with thick forests and large water bodies

148. Why is convectional rainfall mainly received in afternoon?

There is high transpiration and evaporation rate in the afternoon

149. How is convectional rainfall dangerous to people?

It is accompanied with lightning and thunderstorms with strike people

150. List down six districts that receive convectional rainfall.

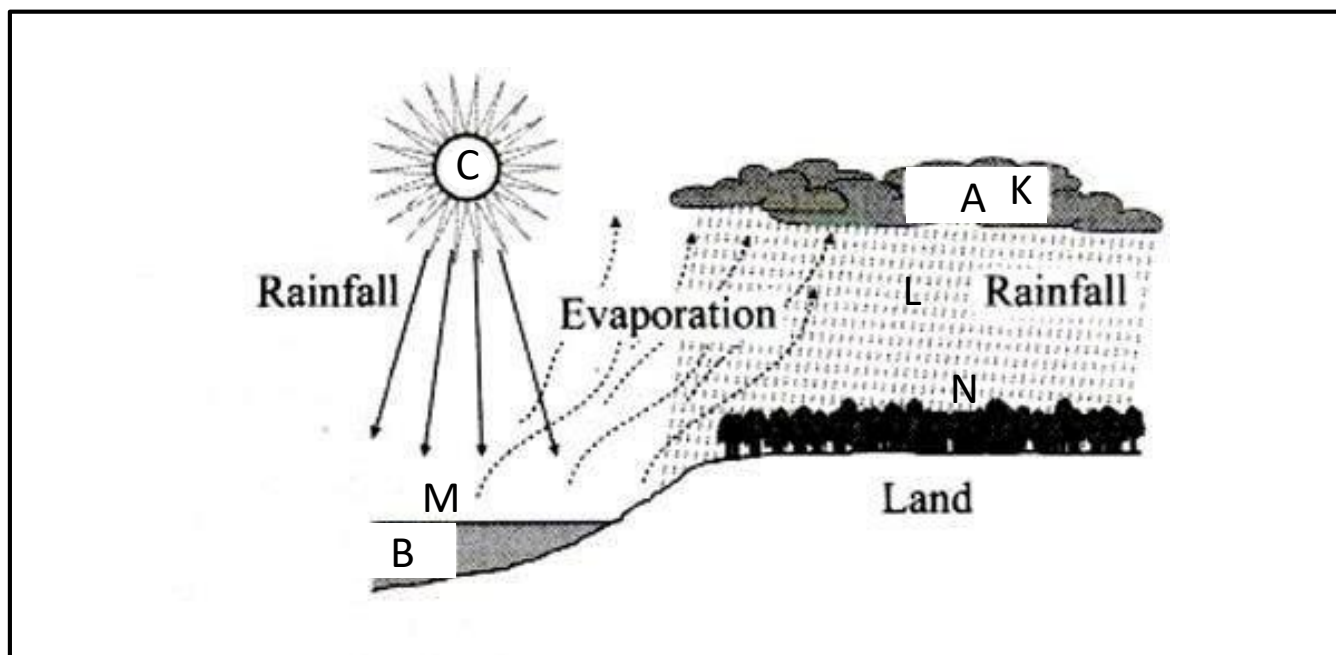

- | | |
|------------------|--------------------|
| - <u>Kampala</u> | - <u>Kalangala</u> |
| - <u>Masaka</u> | - <u>Mukono</u> |
| - <u>Buvuma</u> | - <u>Wakiso</u> |

151. Why does Kampala receive convectional rainfall?

Kampala is near L. Victoria

FORMATION OF CONVECTIONAL RAINFALL

152. Study the diagram below and answer questions about it.

a) Identify the type of rainfall shown above.

Convectional rainfall

b) Name the features marked with the letters below.

A- Clouds

B- Waterbody

C- Sun

c) Write down the processes marked with the following letters.

M- Evaporation

N- Transpiration

k- Condensation

L- Precipitation

d) How is the sun important in the formation of convectional rainfall?

It heats the waterbody and evaporates

RELIEF RAINFALL

153. What is another name for relief rainfall?

Orographic rainfall

154. Name the type of rainfall received in mountainous areas.

Relief rainfall

155. What is relief rainfall?

Relief rainfall is the type of rainfall received in mountainous areas

156. Give the meaning of the term relief.

Relief is the general appearance of the landscape

157. Which side of the mountain receives;

a) **Reliable rainfall**

Windward side

b) **Little or no rainfall**

Leeward side

158. Give the meaning of the following terms.

a) Windward side

This is the side of the mountain that receives reliable rainfall

b) Leeward side

This is the side of the mountain that receives little or no rainfall

159. Name the side of the mountain that is good for crop growing.

Windward side

160. Why is the windward side of the mountain good for crop growing?

It receives reliable rainfall

161. Give a reason why the windward side of the mountain receives reliable rainfall.

It receives warm moist winds

162. What is another name for leeward side of the mountain?

Rain shadow side

163. Name the side of the mountain which is not good for crop growing.

Leeward side

164. Why is the rain shadow side of the mountain not good for crop growing?

It receives little or no rainfall

165. Give a reason why the leeward side of the mountain receives little or no rainfall.

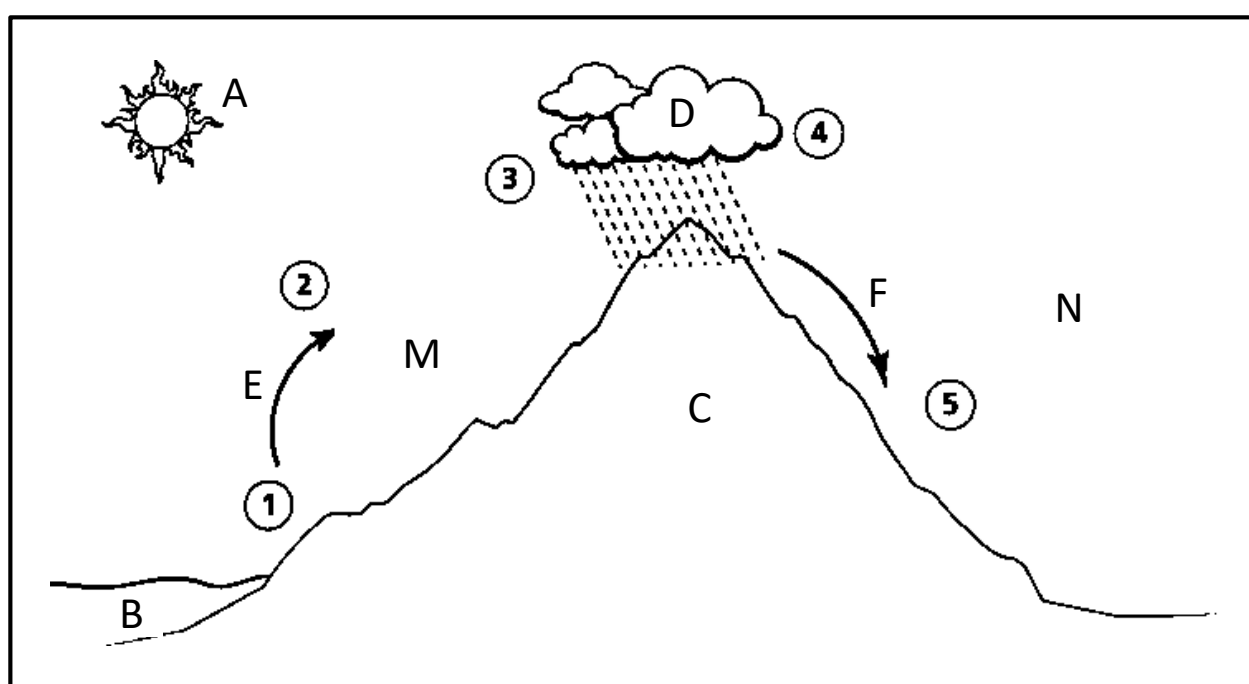

It receives dry winds

166. Why do winds reach the leeward side when dry?

They lose their moisture on the way

FORMATION OF RELIEF RAINFALL

167. Study the diagram below and answer questions about it.

a) Name the type rainfall shown above.

Relief rainfall

b) Write the side of the mountain marked with the letters below.

M- Windward side

N- Leeward side

c) Write down the winds marked with the following letters.

E- Warm moist winds

F- Dry winds

d) Name the features marked with the letters below.

A- Sun

B- Waterbody

C- Mountain

D- Clouds

e) How are the following important in the formation of relief rainfall?

i) **Sun**

It heats waterbody and evaporates

ii) **Mountain**

It forces warm moist winds to rise and condense with the clouds

f) Mention two processes involved in the formation of relief rainfall.

- Evaporation

- Condensation

168. List down six districts that receive relief rainfall.

- Mbale

- Budada

- Sironko

- Kisoro

- Kabale

- Bulambuli

169. Why does Bundibugyo receive relief rainfall?

It is mountainous

CYCLONIC RAINFALL

170. What is another name for cyclonic rainfall?

Frontal rainfall

171. Name the type rainfall received in plain areas.

Cyclonic rainfall

172. What is cyclonic rainfall?

This is the type of rainfall formed when warm moist winds meet the cold dry winds at a front

Or: This is the type of rainfall received in plain areas

173. Which type of rainfall is formed when warm moist winds meet the cold dry winds at a front?

Cyclonic rainfall

174. Why do warm moist winds rise up after meeting the cold dry winds?

They are lighter than the cold dry winds

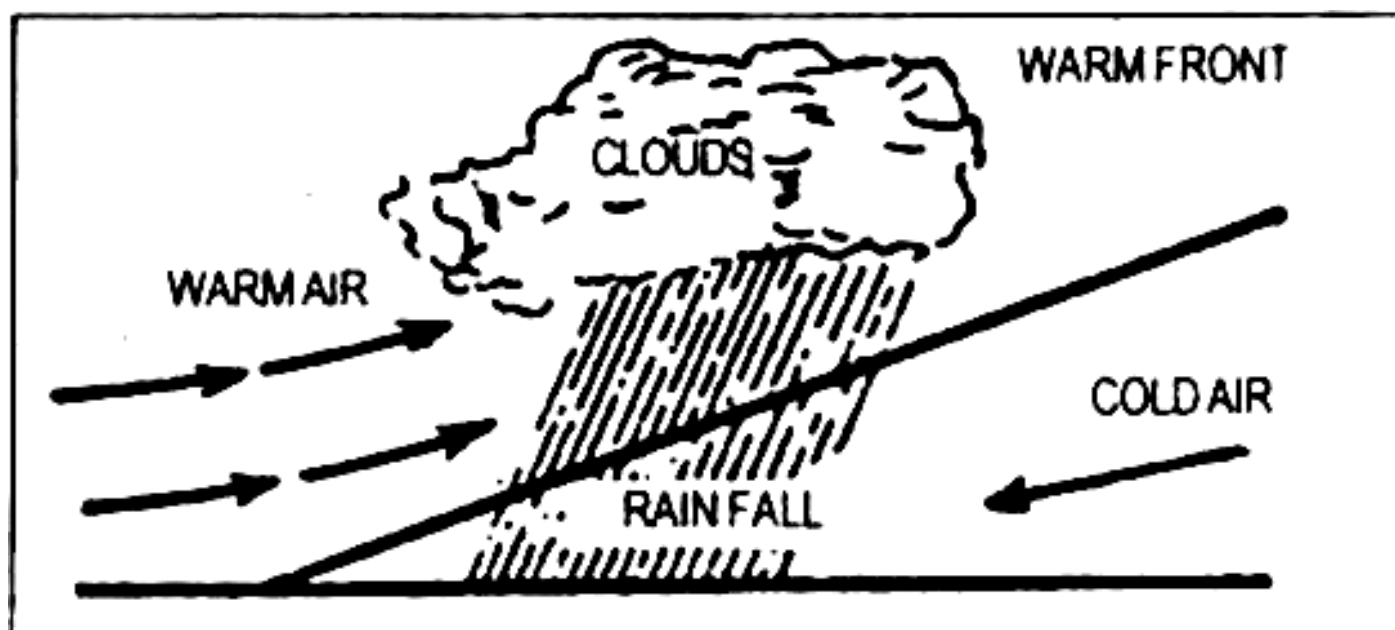

175. Name the point where two air masses meet.

Front

176. Define the term front.

Front is the point where two air masses meet

177. Name type of rainfall below.

Cyclonic rainfall

178. Give one sub region of Uganda that receives cyclonic rainfall.

Karamoja

179. Mention four districts in Uganda that receive frontal rainfall.

- Kotido
- Kaabong
- Kitgum
- Abim

RAIN GAUGE

180. Name the weather instrument used to collect and measure the rain received at a given time and place.

Rain gauge

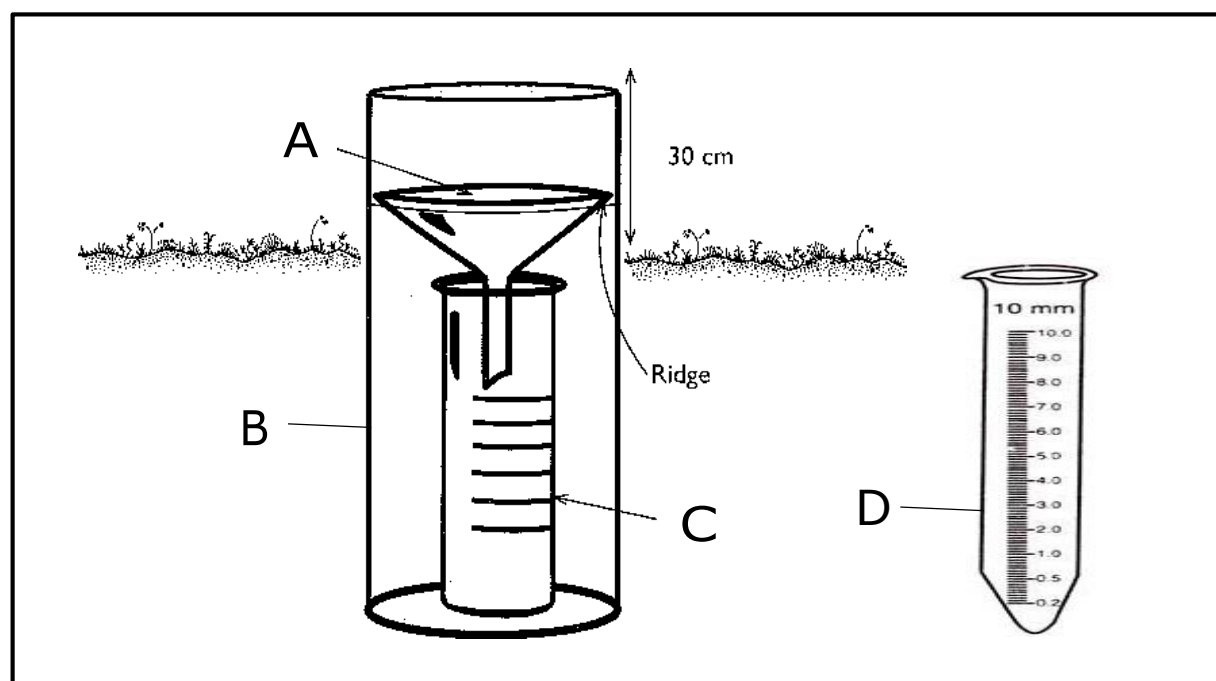

181. How is a rain gauge important to people?

- It helps people to measure the amount of rainfall received in an area
- It helps people to measure how deep rain water has gone in the soil

182. Mention four components of a rain gauge.

- Funnel
- Metal container
- Collecting jar
- Measuring cylinder

183. Study the diagram below and answer questions about it.

a) Name the weather instrument shown above.

Rain gauge

b) Identify the components of the above weather instrument marked with the following letters.

A- Funnel

B- Metal container

C- Collecting jar

D- Measuring cylinder

c) How are the following useful to a rain gauge?

i) **Funnel**

It directs rain water into the collecting jar

ii) **Measuring cylinder**

It is used to measure the depth of rain water received.

184. List down four groups of people who use a rain gauge.

- Farmers
- Hydrologists
- Meteorologists
- Students

185. What term is used to mean the scientific study of the Earth's water?

Hydrology

186. Give the meaning of the term hydrology.

Hydrology is the scientific study of the Earth's water

187. Name the people who carry out the scientific study of Earth's water.

Hydrologists

188. Which instrument is used to measure the density of liquids?

Hydrometer

189. In which units is rainfall measured?

Millimetres

190. Why is rainfall measured in millimetres?

To know how deep rain water has gone in the soil

191. State three ways how a rain gauge should be placed.

- It should be placed in a flat open place
- It should be placed atleast 30cm above the ground
- It should be placed atleast 50cm deep underground

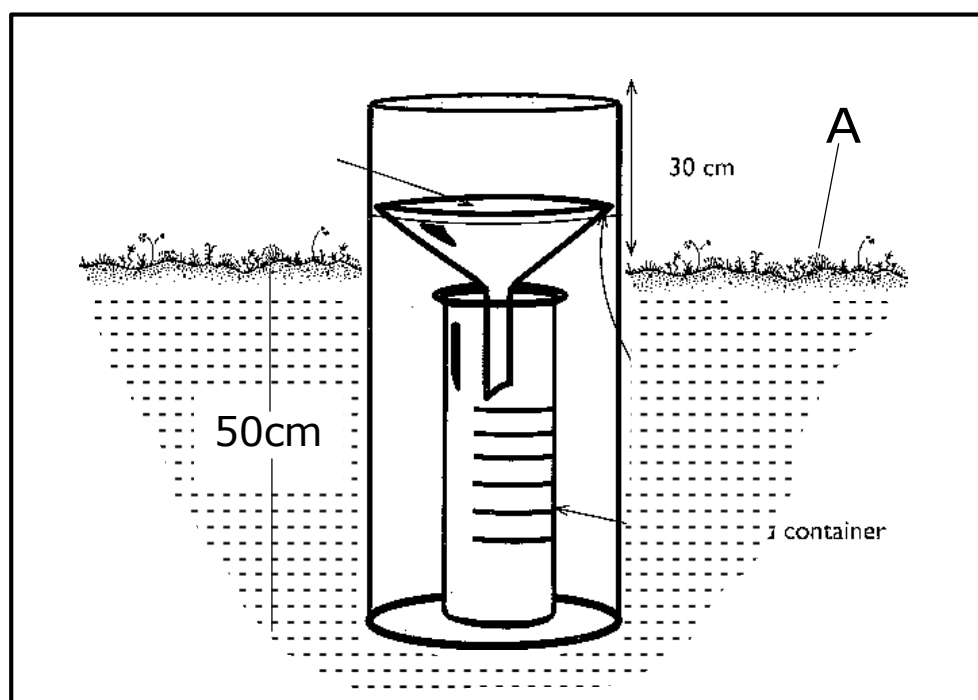

192. Name the place where the rain gauge is placed to collect the accurate amount of rainfall received.

Flat open place

193. Why is a rain gauge placed in a flat open place?

- To collect the accurate amount of rainfall received
- To prevent obstruction of rain by buildings and trees
- Or: To prevent water droplets from buildings and trees entering the rain gauge

194. Study the rain gauge and answer questions that follow.

a) Name the feature marked with letter "A".

Grass

b) Why is glass planted around the rain gauge?

To prevent water splashes from entering the rain gauge

c) How are water splashes prevented from entering the rain gauge?

By planting grass around the rain gauge

d) Why is the rain gauge placed 30cm above the ground?

To prevent flowing water from entering the rain gauge

e) Why is the rain gauge sunk 50cm into the ground?

To prevent the evaporation of water which is collected

CALCULATIONS OF RAINFALL

195. Study the table below and answer questions about it.

Day	Mon	Tue	Wed	Thur	Fri	Sat	Sun
Rainfall in (mm)	50	80	90	25	60	70	80

a) On which days was the same amount of rainfall received?

On Tuesday and Sunday

b) Name the day that received the highest amount of rainfall.

Wednesday

c) Which day had the lowest amount of rainfall?

Thursday

d) Calculate the rainfall range.

$$\begin{aligned}
 \text{Rainfall range} &= \text{H.R} - \text{L.R} \\
 &= 90\text{mm} - 25\text{mm} \\
 &= \underline{65\text{mm}}
 \end{aligned}$$

e) Find the total amount of rainfall received in that week.

$$\begin{aligned}
 \text{Total} &= (50 + 80 + 90 + 25 + 60 + 70 + 80)\text{mm} \\
 &= \underline{455\text{mm}}
 \end{aligned}$$

STEVENSON SCREEN

196. What name is given to the wooden box with metallic stands in which delicate weather instruments are kept?

Stevenson screen

197. How is the Stevenson screen useful at a weather station?

It is where delicate weather instruments are kept

198. What kind of instruments are kept in a Stevenson screen?

Delicate weather instruments

199. How are delicate weather instruments protected against damage?

By keeping them in the Stevenson screen

200. Name three delicate weather instruments kept in the Stevenson screen.

- Hygrometer
- Barometer
- Six's thermometer

201. What are delicate weather instruments?

These are equipment which can easily be damaged

202. Give the meaning of the term Stevenson screen.

This is a wooden box with metallic stands in which delicate weather instruments are kept.

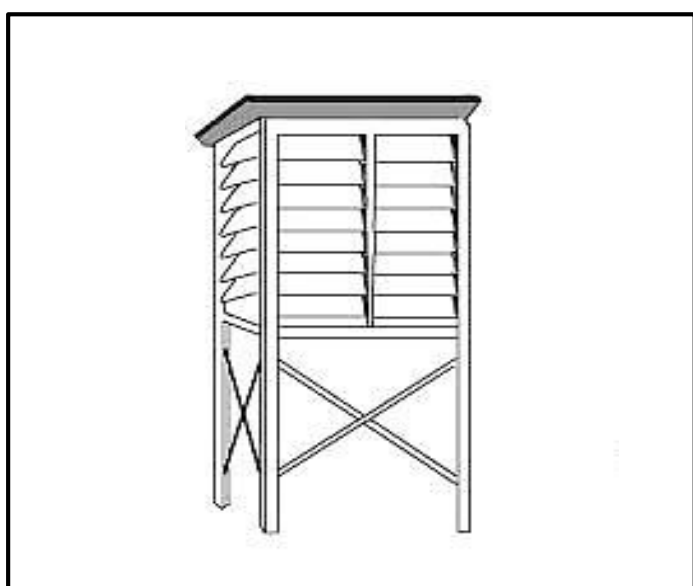

203. Apart from the delicate weather instruments, what else is kept in the Stevenson screen.

Weather record book

204. What special name is given to the weather record book kept in the Stevenson screen?

Weather log

205. Name the structure below.

Stevenson screen

206. Why is a Stevenson screen painted white?

To reflect sunshine

207. Name the colour painted on the Stevenson screen to reflect sunshine.

White

208. Give a reason why a Stevenson screen is made with louvers.

To allow free air circulation

209. State a reason why a Stevenson screen is made with a ventilated floor.

To allow free air circulation

210. Why is the Stevenson screen made of wood?

Wood is a bad conductor of heat

211. Give a reason why a Stevenson screen is built on metallic stands.

To prevent pests from damaging it

212. Why is a Stevenson screen raised using stands?

- To prevent contact with land radiations

- To prevent fast flowing water from entering the Stevenson screen

213. State a reason why a Stevenson screen is made with a double roof.

To prevent direct heating from the sun

214. How is the sun prevented from shining directly on the thermometers inside the Stevenson screen?

By installing it facing North

215. Why is the Stevenson screen installed facing North?

To prevent the sun from shining directly on the thermometers inside the Stevenson screen

INFLUENCE OF WEATHER ON PEOPLES WAY OF DRESSING

216. How does weather influence people's way of dressing?

- People wear light clothes on sunny and hot days

- People wear heavy clothes on cold days

- People wear gumboots on rainy days

- People wear rain coats on rainy days

- People wear hats on sunny days

- People put on sunglasses on sunny days

ON PEOPLE'S ACTIVITIES

217. How does weather influence people's activities?

- During windy weather people winnow their harvested seeds

- During rainy weather people plant their crops

- During sunny weather people harvest their mature crops

TERMS ASSOCIATED WITH WEATHER

218. Give the meaning of the following terms. a) Isobars

These are lines drawn on a weather map joining places with the same air pressure

b) Isotherms

These are lines drawn on a weather map joining places with the same temperature

c) Isohels

These are lines drawn on a weather map joining places with the same sunshine

d) Isohytes

e) These are lines drawn on a weather map joining places with the same amount of rainfall

f) Isonephhs

These are lines drawn on a weather map joining places with the same cloud cover

g) Contours

These are lines drawn on a map joining places with the same altitude

WEATHER DISASTERS

219. Mention seven weather disasters.

- Floods
- Drought
- Soil erosion
- Landslides
- Desertification
- Mudslides
- Hailstorms

220. Give the meaning of the term floods.

This is a large amount of water covering an area which is usually dry

221. Give four causes of floods.

- Silting
- Swamp drainage
- By providing them safe water

222. State six dangers of floods.

- They destroy crops
- They destroy roads
- They destruct bridges
- They destroy people's property
- They lead to death of people
- They lead to the spread of diseases

223. Suggest four ways of preventing floods.

- By constructing dams
- By conserving swamps
- By building flood barks
- By building drainage channels

224. Outline six ways of helping flood victims.

- By resettling them
- By providing them food
- By providing them clothes
- By providing them shelter
- By providing them medicine

- Heavy rainfall
- Poor drainage system

225. What is drought?

This is prolonged sunshine without rainfall

226. Write down three causes of drought.

- Bush burning
- Swamp drainage
- High rate of deforestation

227. Mention four effects of drought.

- It leads to famine
- It leads to death of animals
- It leads to shortage of water
- It leads to shortage of pasture

228. Suggest four solutions for drought effects.

- Practicing irrigation farming
- Practicing swamp reclamation
- Constructing valley dams and boreholes
- Practicing afforestation and re-afforestation

229. What are landslides?

These are masses of soil or rocks that fall down slopes of a mountain

230. Identify three causes of landslides.

- Deforestation
- Heavy rainfall
- Over cultivation

231. What are hailstones?

These are small balls of ice which fall from the sky

232. Give the meaning of the term hailstorm.

This is a storm in which hailstones fall from the sky

233. State three dangers of hailstones.

- They kill animals
- They destroy crops
- They destroy people's property

234. In which two ways can people control effects of hailstones?

- By keeping in doors
- By providing shelter to animals

235. Name the ministry in Uganda responsible for helping people hit by disasters.

Ministry of Relief, Disaster preparedness and Refugee

236. Name two good Samaritan organizations which help people hit by disaster in Uganda.

- United Nations
- Uganda Red cross society

237. What is climate?

Climate refers to the average weather conditions of a place recorded for a long time

238. Define the following terms. a)Climatology

This is the scientific study of climate

b)Climatologist

This is a person who carries out the scientific study of climate

239. Mention two main aspects of climate.

- Rainfall
- Temperature

240. How is climate different from weather?

Climate refers to the average weather conditions of a place recorded for a long time while weather is the state of atmosphere at a given time and place

241. Which major factors influence climate of Africa?

- Prevailing winds
- Ocean currents

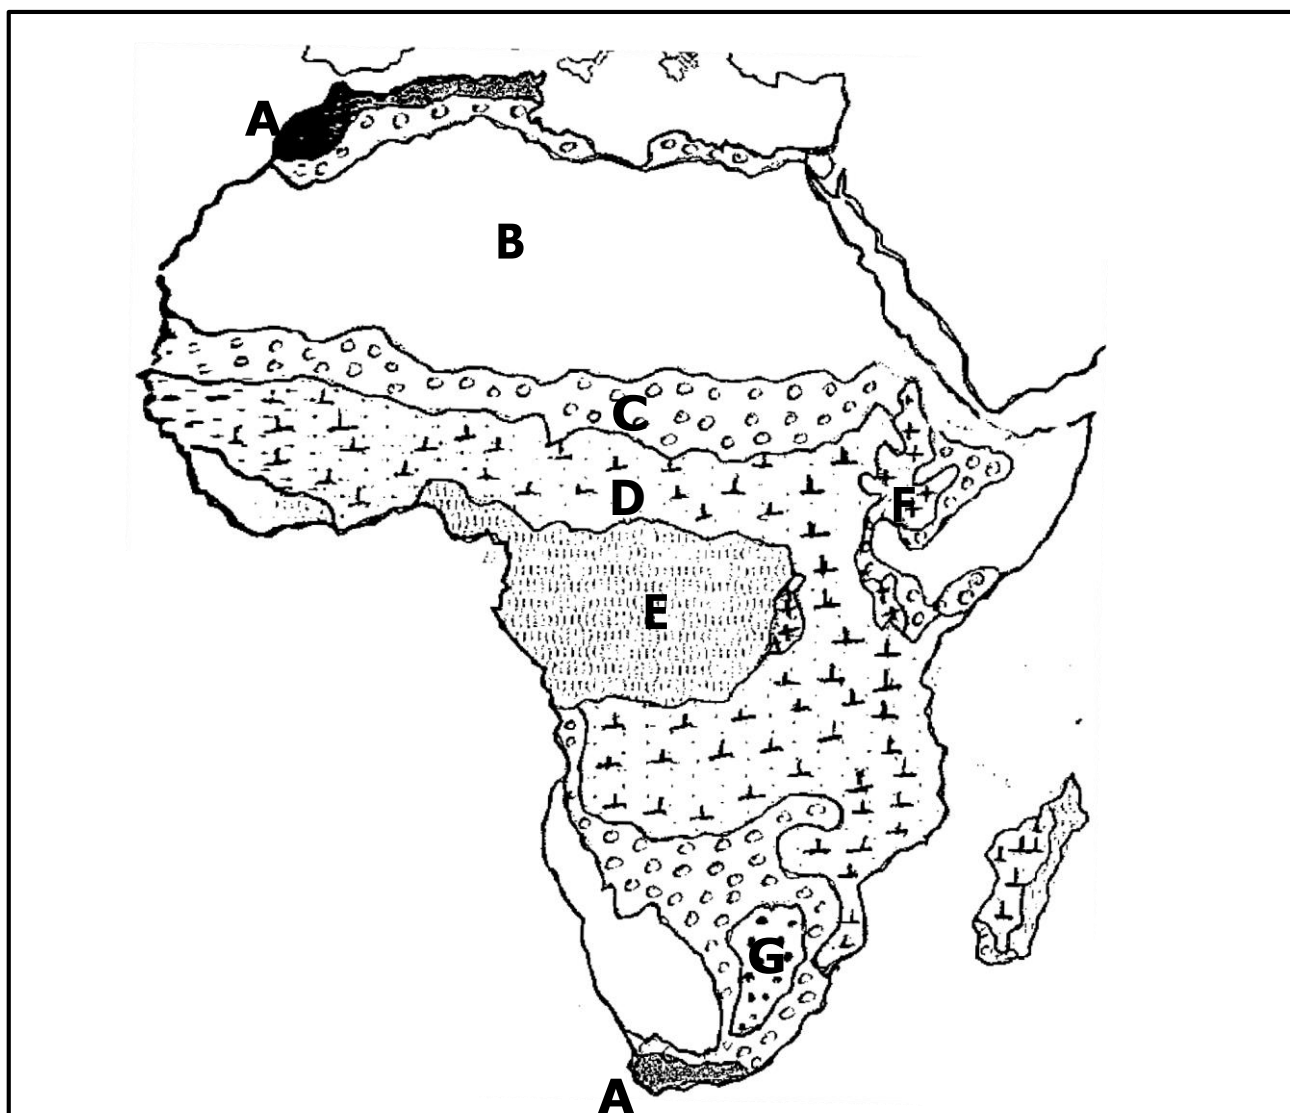

242. What are prevailing winds?

These are winds which blow over a given place periodically

243. Name four major climatic regions of Africa.

- Desert climatic region
- Montane climatic region
- Tropical climatic region
- Temperate climatic region
- Equatorial climatic region
- Semi desert climatic region
- Mediterranean climatic region

244. Study the map of Africa below and answer questions about it.

a) Name the climatic regions marked with the following letters.

- A- Mediterranean climatic region
- B- Desert climatic region
- C- Semi desert climatic region
- D- Tropical climatic region

- E- Equatorial climatic region
- F- Montane climatic region
- G- Temperate climatic region

EQUATORIAL CLIMATE

245. Why is Equatorial climate called so?

It is experienced in areas near the equator

246. Describe Equatorial climate.

It is hot and wet throughout the year

247. Why is Equatorial climate described as hot and wet throughout the year?

It has high temperatures and receives heavy rainfall throughout the year

248. Name the main natural vegetation in areas experiencing Equatorial climate.

Equatorial rain forests

249. Why are the forests in "248" above called Equatorial?

They grow along the Equator

250. Why are Equatorial rainforests called tropical?

They grow with in the tropics

251. Give a reason why the above forests are called rainforests.

They grow in areas which receive heavy rainfall throughout the year

252. Give two reasons why Equatorial climatic region is densely forested.

- They receive heavy rainfall
- They have fertile soils

253. Name the African countries which experience Equatorial climate.

- Liberia
- Cameroon
- Nigeria
- Congo Brazzaville
- Democratic Republic of the Congo
- Gabon
- Madagascar
- Cote D'Ivoire
- Central African Republic

254. Mention two cities in Africa which experience Equatorial climate.

- Kinshasa
- Kampala

255. Name the wettest part of Africa.

Southern slopes of Mt.Cameroon

256. Which type of climate is experienced in southern slopes of Mt.Cameroon?

Equatorial climate

257. Identify the type of climate experienced in areas around L.Victoria.

Equatorial climate

258. Why do areas near L.Victoria receive heavy rainfall?

They have high evaporation and transpiration rate

259. Give two districts in Uganda that experience Equatorial climate.

- Wakiso
- Buvuma
- Kalangala
- Kasese

260. State six characteristics of Equatorial climate.

- It is hot and wet throughout the year
- It has double maxima
- It experiences high temperature
- There is no complete dry month
- It receives heavy rainfall throughout the year
- It receives convectional rainfall
- It has high humidity rate in the atmosphere
- It is experienced in areas along the Equator

261. Define the term double maxima.

This refers to two heavy rainfall seasons

Or: This refers to the two seasons of heavy rainfall

262. Why do Equatorial climatic regions receive two seasons of heavy rainfall?

- They experience equinox twice
- The sun over heads the Equator twice

263. Outline the reasons as to why Equatorial climatic regions receive heavy rainfall.

- It is due to high humidity
- They have many water bodies
- They have constant high temperature

264. Name the type of rainfall received in Equatorial climatic region.

Convectional rainfall

265. Why do Equatorial regions receive heavy rainfall annually?

They have high evaporation and transpiration rate throughout the year

266. How dangerous is convectional rainfall in Equatorial climatic region?

It is accompanied by lightning and thunderstorms which strike people

267. List down seven economic activities that can be carried out in Equatorial climatic region.

- Farming
- Lumbering
- Tourism
- Mining
- Fishing
- Trading
- Craft making

268. Name the main economic activity done in Equatorial climatic regions.

Lumbering

269. Give a reason why lumbering is commonly done Equatorial regions.

They have hard wood trees

Or: Due to the presence of hard wood trees

270. Name the type of farming commonly used in Equatorial regions.

Plantation farming

271. What is plantation farming?

This is the growing of one perennial crop on a large piece of land

272. Give the meaning of the term perennial crops.

These are crops which take more than one year to mature

273. Mention four examples of perennial crops grown in Equatorial regions

- Coffee
- Rubber
- Tea
- Vanilla
- Oil palm
- Cocoa
- Sugarcane

274. State four importance of plantation farming.

- It is a source of raw materials
- It is a source of employment
- It promotes growth of agro based industries
- It increases food production
- It promotes agricultural mechanization

275. Give three disadvantages of plantation farming.

- It is expensive
- It requires a lot of capital
- It requires skilled labour/ much labour
- It requires a large piece of land
- Incase of fire outbreaks or diseases, great loss is realized

276. Why is plantation farming not commonly used by people of East Africa?

- It is expensive
- It requires a lot of capital
- It requires a large piece of land

277. Which country is in Africa is the leading producer of natural rubber?

Ivory Coast

278. Name the trees that produce latex.

Rubber trees

279. Give the meaning of the term latex.

Latex is the milk substance got from rubber trees

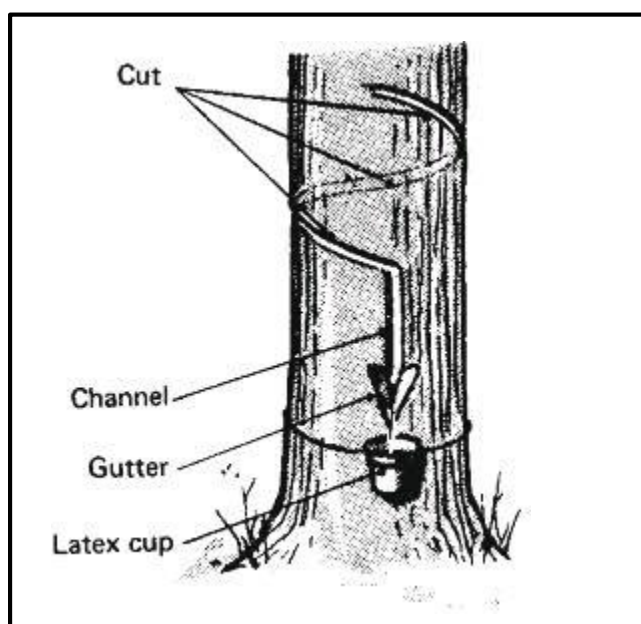

280. Mention six rubber products that are got from natural rubber.

- Balloons
- Rubber bands
- Sandals
- Rubber shoes
- Water pipes
- Rubber bullets

281. How is rubber harvested?

By tapping

282. Name the raw material got from the above tree.

Rubber

283. How is the harvesting of rubber different from that of sugarcane?

Rubber is harvested by tapping while sugarcane is harvested by stem cutting

284. How is coffee harvested in Equatorial regions?

By hand picking

285. State four problems faced by people in Equatorial regions.

- Rebel activities
- Wild animal attacks
- Tropical disease
- Floods
- Poor transport and communication

286. How does Equatorial climate affect people's way of building?

People in Equatorial region build slanting roofed houses

287. How do people ensure water run off from roofs easily in Equatorial region?

By building slanting roofed houses

288. Why do people in Equatorial region build slanting roofed houses?

To allow rain water run off from the roofs easily

289. In which climatic region is the house below commonly built.

Equatorial climatic region

290. Give two reasons why people in Equatorial region are affected by disease vectors.

- They have high temperature
- They have thick forests

EQUATORIAL CLIMATE TABLES AND GRAPHS

291. Study the table below and answer questions about it.

Months	J	F	M	A	M	J	J	A	S	O	N	D
R/fall (mm)	100	170	160	250	250	220	200	350	280	170	180	150
Temp °C	22	22	23	24	24	22	21	28	27	23	24	24

a) Name the type of climate shown in the table above.

Equatorial climate

b) Give a reason to support your answer in "a" above.

It is hot and wet throughout the year

It has no complete dry month

c) In which month was 160mm of rainfall received?

March

d) Name the months which received the same amount of rainfall.

- April

- May

e) Mention the hottest month of the year according to the above table.

August

f) Name the wettest month of the year according to the above table.

August

g) State two economic activities carried out in areas with the above climate.

- Lumbering

- Mining

- Farming

- Fishing

- Tourism

h) Calculate the rainfall range.

$$\begin{aligned}
 \text{Rainfall range} &= \text{H.R} - \text{L.R} \\
 &= 350\text{mm} - 100\text{mm} \\
 &= \underline{250\text{mm}}
 \end{aligned}$$

i) Calculate the temperature range.

$$\begin{aligned}
 \text{Temperature range} &= \text{H.T} - \text{L.T} \\
 &= 28^{\circ}\text{C} - 21^{\circ}\text{C} \\
 &= \underline{7^{\circ}\text{C}}
 \end{aligned}$$

j) Give the relationship between temperature and rainfall according to the table

When temperature increases, rainfall increases and vice versa

292. Study the table below and answer questions about it.

Months	J	F	M	A	M	J	J	A	S	O	N	D
R/fall (mm)	180	175	170	160	100	145	150	170	180	180	190	200
Temp °C	29	30	31	31	30	29	28	27	26	26	25	24

a) Name the type of climate shown in the table above.

Equatorial climate

b) Describe the above climate.

It is hot and wet throughout the year

c) What is the relationship between temperature and rainfall according to the above table?

When temperature increases, rainfall decreases and vice versa

d) How does the above climate influence people's way of building?

People in areas with the above climate build slanting roofed houses

e) How many rainfall seasons are experienced in the above area?

Two rainfall seasons

f) Name the month with the highest amount of rainfall.

December

g) Identify one farm activity done in the above month.

- Planting crops

- Weeding crops

h) Identify one farm activity done in the above month.

- Harvesting matures crops

- Irrigating crops

- Land preparation

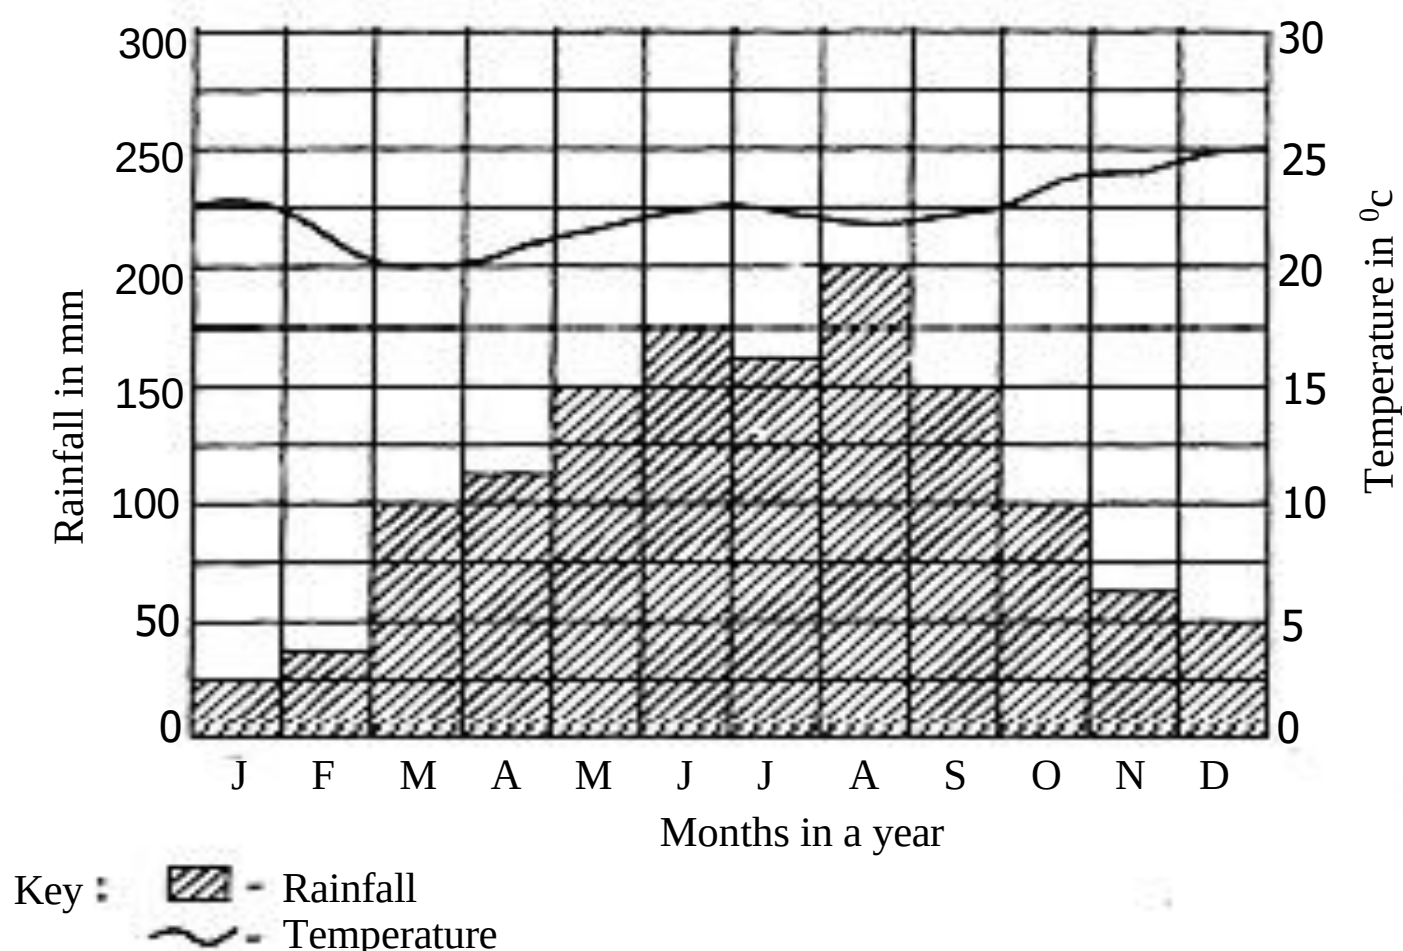

i) Calculate the rainfall range

$$\begin{aligned}\text{Rainfall range} &= \text{H.R} - \text{L.R} \\ &= 200\text{mm} - 100\text{mm} \\ &= \underline{100\text{mm}}\end{aligned}$$

j) Calculate the temperature range.

$$\begin{aligned}\text{Temperature range} &= \text{H.T} - \text{L.T} \\ &= 31^{\circ}\text{C} - 24^{\circ}\text{C} \\ &= \underline{7^{\circ}\text{C}}\end{aligned}$$

293. Below is a climatic graph of a certain district in Uganda. Study it carefully and then answer the questions that follow.

a) Name any one district in Uganda that experiences such type of climate shown in the graph.

- Kasese
- Mpigi
- Wakiso
- Sembabule
- Kalangala
- Kalungu
- Ibanda
- Kamwenge
- Bukomansimbi
- Buvuma

b) Describe the climate experienced in the above district.

It is hot and wet throughout the year

c) Give one economic activity that can be carried out in the above district.

- Farming
- Lumbering
- Latex tapping
- Fishing
- Mining
- Tourism

d) In which month did the above district receive the highest rainfall?

August

e) When was the lowest temperature recorded in the above district?

In March

TROPICAL CLIMATE

294. Why is tropical climate called so?

It is experienced within the tropics

295. Name the type of climate described as hot and wet.

Tropical climate

296. Describe tropical climate.

It is hot and wet

297. Why is tropical climate described as hot and wet?

It has high temperature and receives moderate rainfall

298. Name the type of climate experienced in most parts of;

a) Uganda Tropical climate

b) East Africa Tropical climate

c) Africa Tropical climate

299. Give a reason why Tropical climate is experienced in most parts of;

a) Uganda

Uganda lies within the tropics

b) East Africa

East Africa lies within the tropics

300. Why do most parts of Africa experience tropical climate?

Most parts of Africa lie within the tropics

301. Name the largest climatic region in Africa.

Tropical climatic region

302. State a reason why sometimes Africa is called a tropical continent.

The biggest part of Africa lies within the tropics

303. What is another term used to refer to tropical climate?

Savanna/ Savannah climate

304. State five characteristics of tropical climate.

- It is hot and wet
- It has two seasons i.e. dry and wet season
- It has high temperature
- It receives moderate rainfall
- It receives convectional and relief rainfall

305. Mention two types of rainfall received in Tropical climatic region.

- Convectional rainfall
- Relief rainfall

306. Name the type of rainfall mainly received in Tropical climatic region.

Convectional rainfall

307. How does the Equator influence rainfall in Tropical regions?

Areas near the Equator receive heavy rainfall than areas far away from it

308. What cause dry seasons in Tropical climatic regions?

Dry winds that blow from semi-arid areas

309. Why do dry winds from semi-arid areas cause dry seasons in tropical region?

They do not contain moisture

310. Mention four African countries that experience Tropical climate.

- | | | |
|-------------------|------------------|---------------------------|
| - <u>Uganda</u> | - <u>Rwanda</u> | - <u>Zimbabwe</u> |
| - <u>Kenya</u> | - <u>Burundi</u> | - <u>Southern Mali</u> |
| - <u>Tanzania</u> | - <u>Gambia</u> | - <u>Southern Nigeria</u> |
| - <u>Malawi</u> | - <u>Chad</u> | |

311. List down five districts in Uganda that experience tropical climate.

- | | | |
|------------------|-------------------|-------------------|
| - <u>Masaka</u> | - <u>Hoima</u> | - <u>Ntungamo</u> |
| - <u>Rakai</u> | - <u>Gulu</u> | - <u>Soroti</u> |
| - <u>Arua</u> | - <u>Nakaseke</u> | |
| - <u>Mbarara</u> | - <u>Luwero</u> | |

312. Name the main natural vegetation in Tropical climatic region.

Savannah vegetation

313. What name is used to mean the savannah woodland of Africa?

Miombo woodland

314. Mention four countries in Africa with Miombo woodland.

- | | |
|-------------------|---------------------|
| - <u>Tanzania</u> | - <u>Angola</u> |
| - <u>Zambia</u> | - <u>Mozambique</u> |

315. Why is Miombo woodland of Tanzania sparsely populated?

It is highly infested with tsetse flies

Or: Due to the presence of tsetse flies

316. Mention six economic activities carried out in tropical climatic region.

- | | | |
|-----------------------|-----------------|----------------------|
| - <u>Crop farming</u> | - <u>Mining</u> | - <u>Bee keeping</u> |
|-----------------------|-----------------|----------------------|

- Livestock farming
- Hunting
- Lumbering
- Tourism
- Trade
- Fishing
- Industrialization

317. Name two animals commonly reared in Tropical climatic region.

- Cattle
- Goats

318. List down four crops grown in tropical climatic region.

- Tobacco
- Beans
- Potatoes
- Maize
- Cotton
- Cassava
- Banana
- Coffee
- Peas
- Simsim
- Sorghum
- Millet
- Groundnuts
- Tea

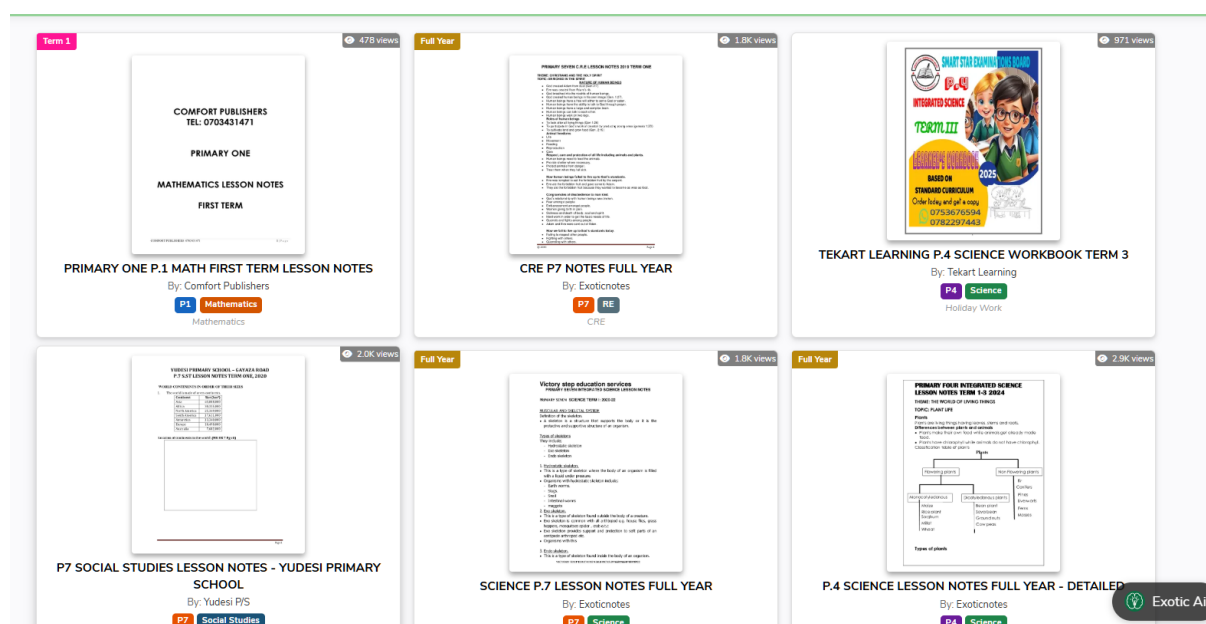

319. Where in Kenya is tea grown on a large scale?

Kericho

320. Name the region of Uganda where tobacco is commonly grown

West Nile
