END OF TERM ONE ASSESMENT, 2026

S.4 CHEMISTRY

PAPER 1

TIME: 2 HOURS

INSTRUCTIONS TO CANDIDATES

*This paper consists of **two** sections **A** and **B**.*

*Answer **all** items in section **A**. All answers in section **A** must be written in the spaces provided.*

*Section **B** consists of **two** parts; Part **I** and Part **II**. Answer any **one** Item from Part **I** and any **one** Item from Part **II**.*

*Answers to Section **B**, must be written on the answer sheet provided*

Drawings and illustrations are to be drawn neatly

Extra questions attempted will not be Scored.

For Scorers Use only

Item no	Basis code	Weighted score	Score's initial
1	T		
	D		
	E		
2	C

SECTION A

Item 1

Mama Nakanda, a long-time herbalist is known for her treatment which involves mixing many plant materials such as Garlic leaves, Ginger, Aloe vera Leaves and cow Ghee that she uses for treating her patients with respiratory related bacterial infections. However, lately, some of her patients she treated did not recover fully from the diseases and they were admitted to Hospital for proper medication.

Task

As a chemistry student,

- a) Identify the category of the product used by Mama Nakanda to treat her patients.

.....

.....

.....

- b) Explain how the product works

.....

.....

.....

.....

- c) Suggest the possible side effect(s) of the product to the users and mitigations

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....
.....
d) Evaluate the product

Item 2.

Hima cement factory uses lime as a major material during the manufacture of cement.

Lime is produced by decomposing limestone in the furnaces according to the following equation.

In a day the company uses 50kg of lime and therefore the manager wants to know how much limestone is required per day. You have been contacted for some help.

Task:

As a student of Chemistry:

a) Explain the categories of the products.

.....
.....
.....

b) Explain the reason that makes lime suitable for its application.

.....

.....

.....

.....

.....

.....

.....

.....

c) Calculate the mass of limestone that the company should buy daily.

(Ca=40, C=12, O=16)

.....

.....

SECTION B

*Attempt **only TWO items** from this section.*

PART I

Item 3

Exide Batteries Kenya Limited intends to expand its production by making more car batteries that use Sulphuric acid with the aim of satisfying its customers in the Auto mobile Industry. The company has identified land in Kisumu town where they can establish a new branch for production. However, the Locals in Kisumu town have raised concerns about their health and environmental impact.

Task

As a chemistry learner, make up a guiding message to sensitize the community on how the production process of sulphuric acid will be conducted, its benefits and possible dangers to the community.

Item 4

Significant copper deposits were discovered in one of the hills in Uganda. An investor was contacted by government to setup an copper rolling factory to tap into the opportunity. However, the residents seem not to understand how copper can be obtained from its natural sources and consequently the benefits of the process and therefore are resisting the project.

As a **senior four** candidate with the knowledge of chemistry, you have been contacted to create awareness to the members about the process of extraction of copper from its ore, benefits and possible dangers and mitigation.

Task

Write a presentation you will use upon meeting them.

PART II

Item 5

Following the discovery of crude oil in the Albertine Region in Uganda, the government of Uganda has set up an oil refinery in Hoima town with an aim to meet the country's fuel demands. However, up to now, the extraction process has not commenced due to the expected high potential risks from the mining and refinery activities. Officials from the government of Uganda are organizing a sensitization campaign for the community and you have been invited to participate in the campaign.

Task

As a chemistry student, write a message containing information you would like to use in the sensitization campaign.

Item 6

"Residents of Jinja are facing severe health risks due to poor air quality," was a headline in one of the recent editions of the Daily monitor newspaper. With the city's reputation tarnished and residents' health hanging in the balance, urgent action to raise awareness and clean the natural resource is needed, the paper continued to state.

The Jinja City Authority (JCA) is organizing to improve the situation following the alarming revelation.

Task

As a learner of Chemistry who has learned about air as a natural resource write an article JCA would use in response to the paper to sensitize the community of Jinja.
