

Topic: our body

PARTS OF THE BODY

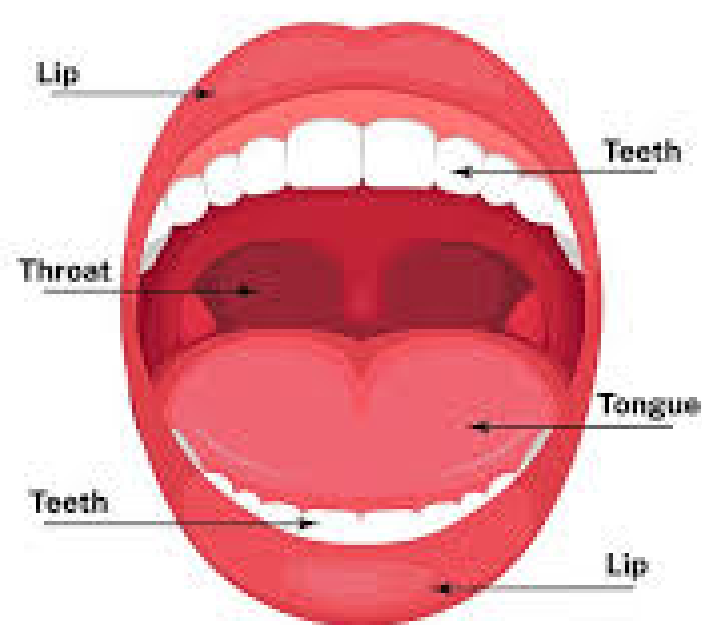

Identifying the things that make up the different parts of our bodies

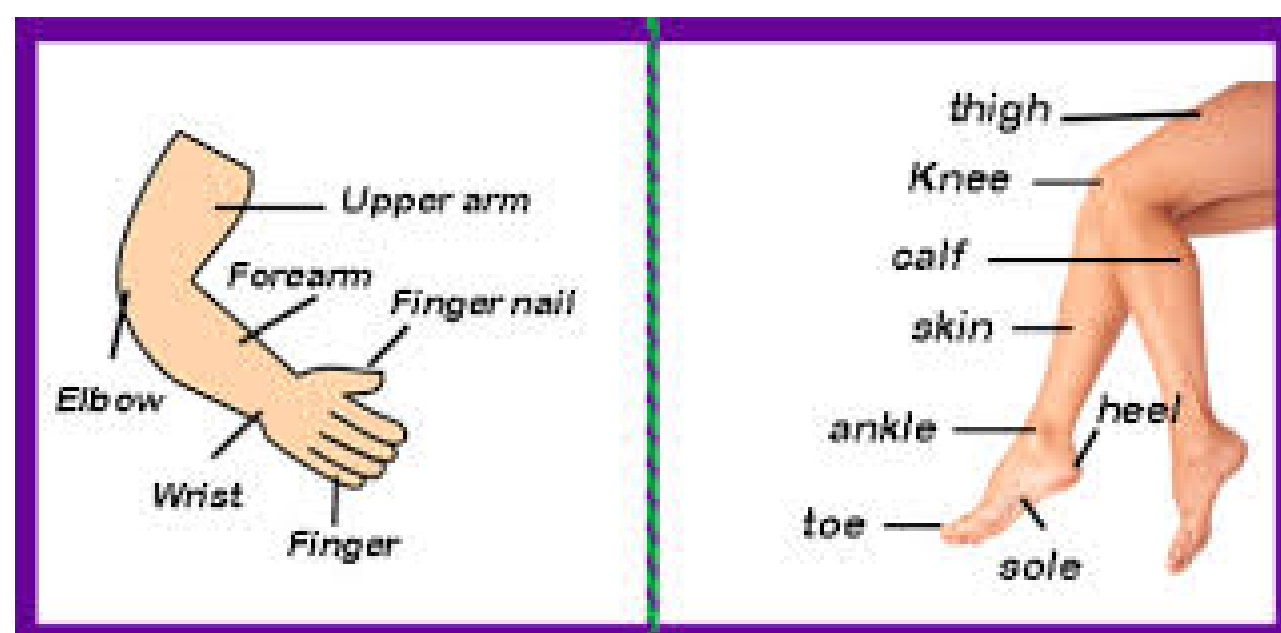

Head

MOUTH

HAND AND LEG

WAYS OF CLEANING OUR BODIES

- By bathing
- By brushing our teeth
- By putting on clean pressed clothes
- By combing our hair
- By washing our hand

WHY DO WE CLEAN OUR BODIES?

- To avoid bad odour
- To avoid diseases

DISEASES THAT MAY COME AS A RESULT OF NOT CLEANING OUR BODIES.

- Ringworms – as a result of not keeping our skins clean

- Tooth decay – as a result of not brushing our teeth
- Diarrhoea – as a result of not washing our hands before and after eating.
- Cracked feet – as a result of not scrubbing and moisturizing our feet properly

The act of cleaning our bodies is also referred to as **PERSONAL HYGIENE**

TOPIC: CLEANING OUR ENVIRONMENT

The process of cleaning the environment is known as **GENERAL HYGIENE**

Our environment is made up of so many areas that is to say it might be at school, home, church or anywhere else.

How to keep our school clean?

- By sweeping the compound.
- By sweeping the class.
- By throwing the trash in the dust bin.
- By organising our desks.

How to keep our homes clean?

- By mopping the house.
- By sweeping our compound.
- By washing the dishes.
- By throwing the trash in the rubbish bin or pit.
- By burning the rubbish.
- By clearing the bushes.
- By clearing all broken bottles, empty containers which might keep water.

Dangers of a dirty environment

- Causes the spread of diseases

- Pollution of water
- Bad smell

Things used to clean our environment

Slasher

Mower

Broom

Rug/ mopper

THE 5 SENSES OF THE BODY

Our body helps us learn about the world using **five senses**. These senses are like special helpers.

1. Sight 👁️

We use our **eyes** to see.

We can see:

- Colors
- Shapes
- Animals
- People

Example:

You see a red ball.

2. Hearing 🦻

We use our **ears** to hear sounds.

We can hear:

- Music
- Birds singing
- People talking
- A bell ringing

Example:

You hear a dog bark.

3. Smell 👃

We use our **nose** to smell things.

We can smell:

- Flowers
- Food
- Perfume
- Smoke

Example:

You smell fresh bread.

4. Taste 👅

We use our **tongue** to taste food and drinks.

We can taste:

- Sweet
- Sour
- Salty
- Bitter

Example:

Candy tastes sweet.

5. Touch 🖐️

We use our **skin and hands** to feel things.

We can feel:

- Hot or cold
- Soft or hard
- Smooth or rough

Example:

Ice feels cold.

Simple Memory Trick

👁️ Eyes → See

👂 Ears → Hear

👃 Nose → Smell

👅 Tongue → Taste

🖐️ Skin/Hands → Touch

Short Quiz

1. Which body part helps us see?
2. Which sense helps us hear music?
3. What do we use to smell flowers?
4. Which sense tells us ice is cold?
5. What do we use to taste food?

Song Idea 🎵

“Eyes can see, ears can hear,
Nose can smell things far and near.

Tongue can taste, hands can touch,
Our five senses help so much!”

USING OUR SENSES TO TELL TEXTURE AND TEMPERATURE

Our senses help us learn about objects around us. Two important things we can notice are **texture** and **temperature**.

1. Texture 🖐️

Texture means how something feels when we touch it.

We use our **sense of touch** (skin and hands) to know texture.

Examples of textures:

- **Soft** → pillow, cotton
- **Rough** → tree bark, sandpaper
- **Smooth** → glass, marble
- **Hard** → stone, table
- **Sticky** → glue, honey

Example:

- A teddy bear feels soft.
- A rock feels hard and rough.

2. Temperature 🌡️

Temperature tells us if something is **hot, warm, cool, or cold**.

We also use our **sense of touch** to feel temperature.

Examples:

- Ice feels cold.
- Tea may feel hot.
- Water can feel warm or cool.

⚠️ Teach children to be careful with very hot objects.

Using Different Senses Together

Sometimes we use more than one sense at the same time.

Example:

- We **see** steam coming from soup with our eyes.
- We **feel** that the bowl is warm with our hands.
- We **smell** the soup with our nose.

SIMPLE CLASSROOM ACTIVITY

Texture Box

Place objects in a box:

- Cotton
- Sponge
- Stone
- Sandpaper

Let children touch them and describe:

- Soft
- Rough
- Smooth
- Hard

Temperature Activity

Use:

- Warm water
- Cool water

Children can carefully touch and say:

- “This feels warm.”
- “This feels cold.”

Key Words

Sense	Body Part	Helps Us Know
Touch	Skin/Hands	Texture and temperature
Sight	Eyes	What objects look like
Smell	Nose	Different smells

Short Questions

1. Which sense helps us feel texture?
2. What texture is a pillow?
3. How does ice feel?
4. Which body part helps us feel temperature?
5. Name one smooth object.

Lesson Topic: Clothes We Wear

Clothes are materials we wear on our bodies to cover and protect ourselves. Different people wear different clothes depending on gender, weather, culture, religion, and occasion.

CLOTHES WE WEAR

Some common clothes include:

- Shirts
- Dresses
- Trousers
- Shorts
- Skirts
- Sweaters
- Jackets
- School uniforms
- Socks
- Shoes

Clothes Worn by Boys and Girls

Traditionally in many communities:

Boys often wear:

- Trousers

- Shorts
- Shirts
- Suits

Girls often wear:

- Dresses
- Skirts and blouses
- Leggings
- Gowns

Some clothes like sweaters, T-shirts, school uniforms, socks, and jackets can be worn by both boys and girls.

IMPORTANCE OF CLOTHES

Clothes are important because they:

1. Cover our bodies
2. Protect us from cold, rain, and sunshine
3. Make us look smart and neat
4. Help us identify different cultures and groups
5. Give us confidence
6. Help people during special work like school, sports, or health work

CLOTHES WORN IN DIFFERENT CULTURES

Different cultures wear different traditional clothes.

Examples:

In Uganda

- The Baganda women wear **gomesi**
- Baganda men wear **kanzu**

India

- Women may wear **sarees**
- Men may wear **kurta**

Nigeria

People wear colorful traditional attire like **agbada** and wrappers

Arabs

- Men may wear long white robes
- Women may wear abayas or hijabs

Lesson Topic: Plants

Plants are living things that grow in the soil. They need water, air, sunlight, and good soil to grow well. Plants are very important to people and animals.

Examples of Plants

Some common plants are:

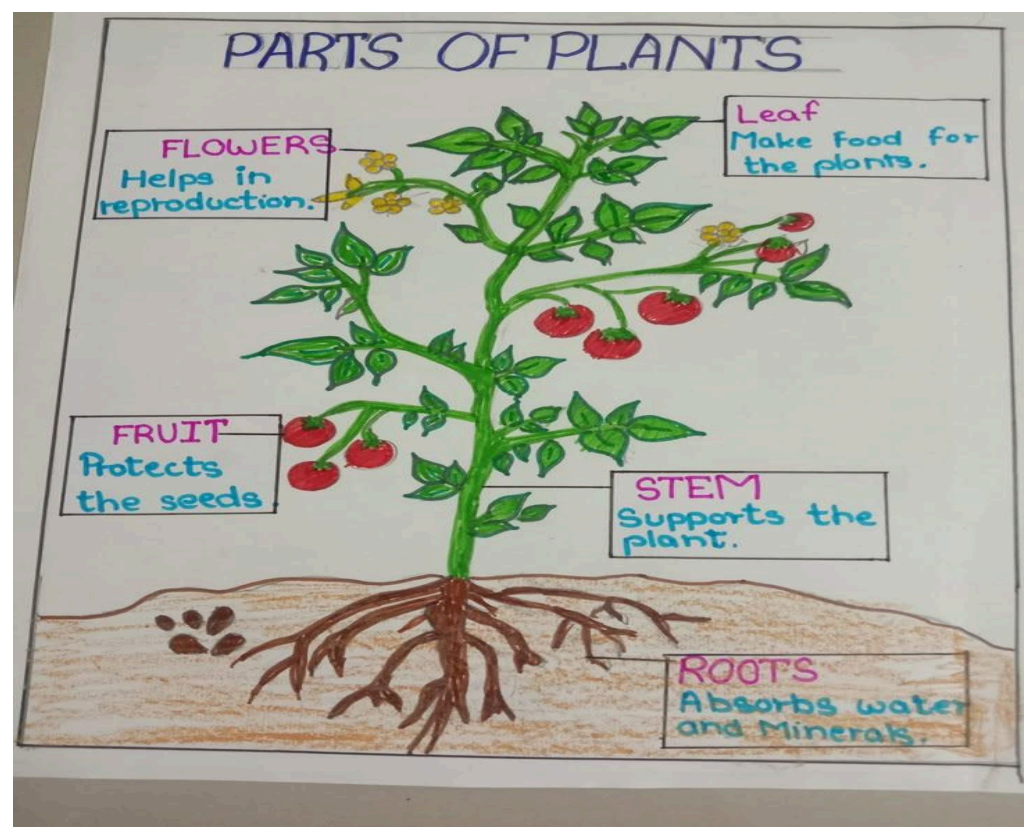

- Trees
- Flowers
- Grass
- Maize
- Beans
- Banana plants
- Mango trees

Parts of a Plant

The main parts of a plant are:

1. Roots
2. Stem
3. Leaves
4. Flowers
5. Fruits
6. Seeds

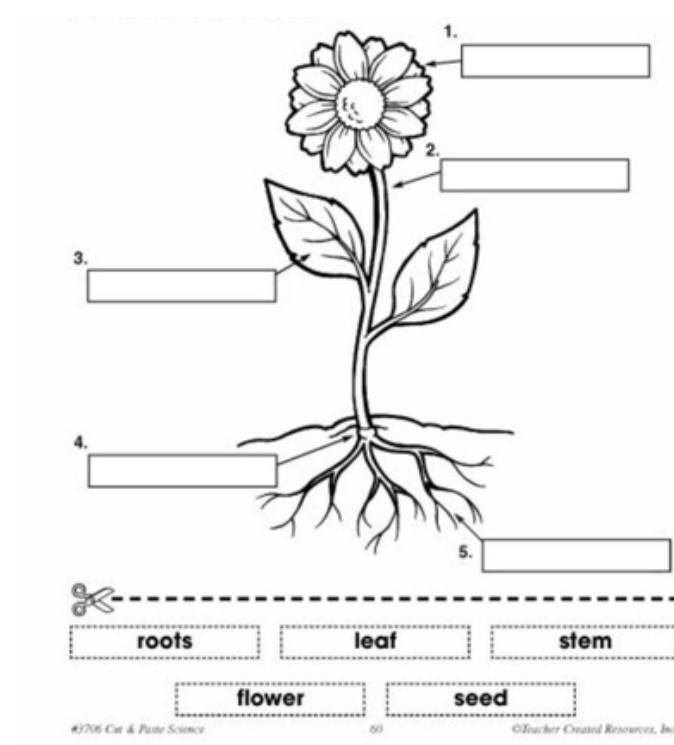

Functions of the parts

- **Roots** absorb water and hold the plant in the soil.
- **Stem** supports the plant.
- **Leaves** make food for the plant.
- **Flowers** help in reproduction.
- **Fruits** contain seeds.
- **Seeds** grow into new plants.

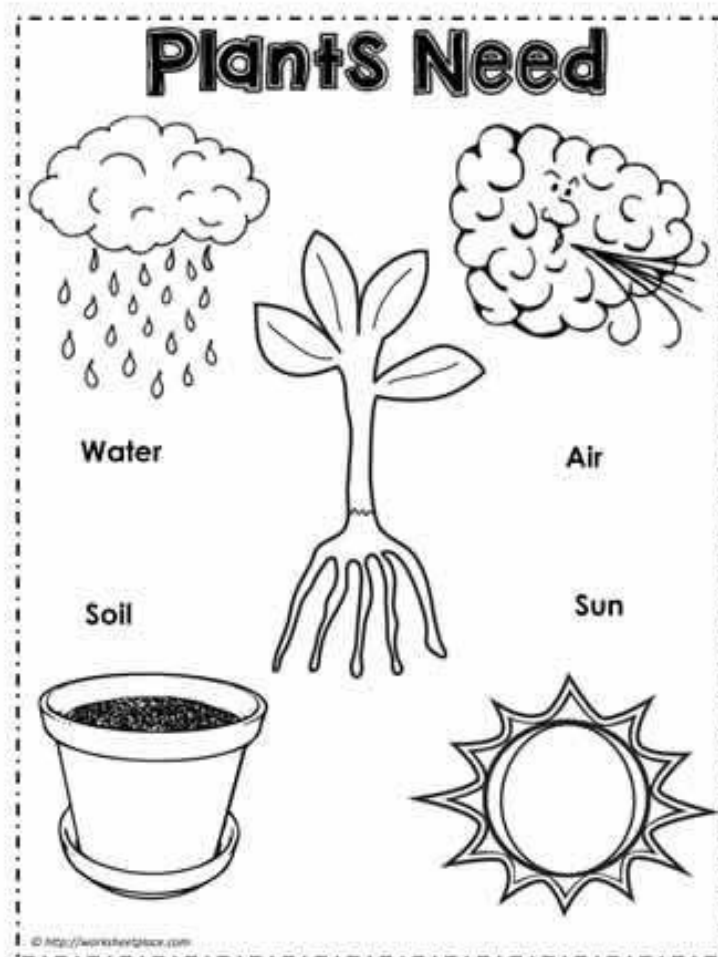

Activity

Name the parts of the plant.

Plants need the following to grow;

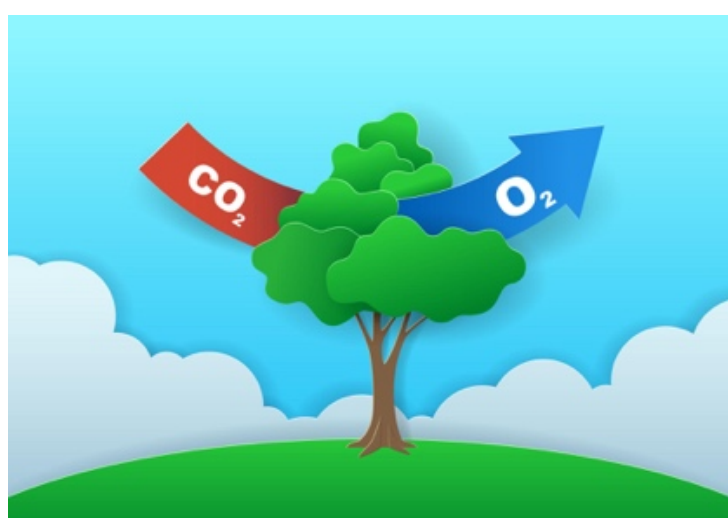

- Water
- Air
- Soil
- sun

IMPORTANCE OF PLANTS

Plants are important because they:

- Give us food
- Provide medicine
- Give us oxygen to breathe
- Provide shade
- Help in making rainfall
- Beautify the environment
- Provide timber and firewood

Types of Plants

a) Trees

Trees are big and strong plants.

Examples:

- Mango tree
- Jackfruit tree

b) Shrubs

Shrubs are smaller than trees.

Examples:

- Rose plant
- Coffee plant

c) Herbs

Herbs are small soft plants.

Examples:

- Tomato plant
- Bean plant

Some plants grow along the ground. They are called **creepers**.

These include;

Pumpkin plant

Watermelon plant

More examples of plants include;

Water plants

These are plants that grow in water for example lotus and a lily

Lotus plant

Lily

These are also referred to as **aquatic plants**

DESERT PLANTS

Some plants grow in deserts, they need very less water to grow. They have thorns on them and these include;

Cactus plant

Date palm plant

How to Care for Plants

We can care for plants by:

- Watering them
- Weeding around them
- Putting manure in the soil
- Protecting them from animals
- Avoiding cutting trees carelessly

Lesson Topic: Forests

A forest is a large area covered with many trees and other plants.

Forests are homes for many animals, birds, and insects. They are important to people and the environment.

TYPES OF FORESTS

a) Natural Forests

These forests grow naturally without being planted by people.

Examples:

- Mabira Forest
- Budongo Forest

b) Planted Forests

These are forests planted by people.

Examples:

- Pine forests
- Eucalyptus forests

Things Found in Forests

Forests contain:

- Trees
- Animals
- Birds
- Insects
- Rivers and streams
- Flowers and grasses

IMPORTANCE OF FORESTS

Forests are important because they:

1. Give us fresh air
2. Provide timber and firewood
3. Attract rainfall
4. Provide medicine
5. Give homes to animals
6. Help to prevent soil erosion
7. Beautify the environment

DANGERS FACING FORESTS

Forests are destroyed by:

- Cutting down trees carelessly
- Bush burning
- Charcoal burning
- Building in forest areas

These activities cause environmental destruction.

The process of cutting down trees from the forest is called **Deforestation**.

WAYS OF CONSERVING FORESTS

We can protect forests by:

1. Planting more trees
2. Avoiding bush burning
3. Stopping careless tree cutting
4. Teaching people about protecting forests
5. Creating forest reserves

The process of planting trees is known as **Afforestation**.
